The talookdaree schools alluded to last year have been maintained; with regard to them the Deputy Commissioner of Seetapore remarks:—"The difficulties which beset this school from the first have not been removed, the talookdars hang back and do not send their sons to school willingly, and those boys who do attend are constantly withdrawn from their studies for insufficient reasons. I confess that this is disappointing; but I look forward with confidence to a time not many years hence when some of these boys we educate against great difficulties now will grow into men, and add the force of their example to the weight of their personal influence as talookdars. I freely admit that the results heretofore attained are not commensurate with the time and labour and money they have cost; but I do not, therefore, regret the outlay or the trouble; they will bear fruit hereafter." The same remarks apply to all those schools. The talookdars are averse to sending their children to schools at a distance; with the mothers this feeling is even stronger, and the boys themselves are very apathetic and insensible to the advantages of education, though there are a few honourable exceptions.

In all the talookdaree schools there is a lower class composed of sons of Government officials, and of respectable natives engaged in mercantile pursuits.

These boys attend regularly, work hard, and their progress is most gratifying; many of them will turn out most useful public servants.

In Gonda there has been a falling off in attendance, but in other districts there has been an increase. There are now at—

Seetapore	55
Fyzabad	106
Mohomdee	69

The talookdars have everywhere evinced great liberality in subscribing to these schools, and in Baraitch they have lately offered to contribute a large sum for the establishment of a school at that station.

Besides these institutions there are inferior schools, supported partly by fees and subscriptions, and partly by small grants from the Octroi funds. In the Lucknow division there are eleven of these, one at each Tehseel and Suddur station, except Lucknow, where it is not required; they are attended by 390 scholars, of whom 62 are learning English.

Similar schools have been established in the other division and in Hurdui, where many of the boys learn English; they have been very successful, chiefly owing to the strong interest taken in them by some of the leading talookdars. There are a considerable number of village schools, but they are poorly attended and require no particular notice.

The school established at Lucknow, through the personal exertions of Colonel Abbott, for the education of the daughters of Europeans and Eurasians, continues to flourish; it is a most useful institution, and deservedly popular.

SECTION IV.—PUBLIC WORKS.

63. The budget grant for the year was limited to 19 (nineteen) lacs, of which 7 (seven) lacs were allotted to works of internal improvement.

Owing to the advanced state of the buildings for the accommodation of troops, only 5½ lacs were allotted to military works, which had absorbed the bulk of the budget grants of the three previous years.

The only other considerable allotment, viz. 1½ (one and a half) lakhs, was for the central gaol at Lucknow, and the two divisional jails at Fyzabad and Seetapore.

PART I.—COMMUNICATIONS.

64. Great progress was made on the Lucknow and Fyzabad road (80 miles), and the branch to Byram Ghat (20 miles).

These roads were only commenced in March 1861, but by the close of the year under review, the section (18 miles in length), between Lucknow and Nawabgunge, Bara Bunkee, was completed in every respect, with the exception of one bridge; the earth work and 25 bridges on the remainder of the road, were finished; and the bricks for the other bridges and a large amount of kunkur were collected.

The progress on the Fyzabad and Allahabad road was also considerable. On the section (72 miles) that fall within the Oudh boundary, all the earth work, except in the immediate vicinity of the large bridges over the Goomtee and Sye, and all the minor bridges, were completed. Five large bridges still remain to be constructed. A single coat of metal was consolidated over a length of 12½ miles, and kunkur for 54½ miles, was collected. On the section between the Oude boundary and Allahabad (16¾ miles), the earth work only was commenced at the close of the year.

The road between Roy Bareilly and Dalamow Ghat (on the Ganges), 16 miles in length, was commenced during the year; the whole of the earth work and eight bridges were completed, and considerable progress was made in the collection of metal.

The road between Fyzabad and Gonda (about 30 miles) was also commenced during the year, the earth work and 10 bridges in the section (16½ miles) between Gonda and Wazeergunge, were finished.

A bridge of boats was maintained across the River Gogra at Fyzabad, and 27 new boats were built for it.

PART II.—MILITARY.

65. The demolitions of the city of Lucknow were cleared on the east and west faces of the "Stone Bridge Fort," so as to complete a clear esplanade all round the fort, 500 yards in width; the work was very heavy.

Although the grant for barrack accommodation was restricted, still a great deal of work was done; only one barrack was entirely constructed, but in 45 others more or less work was done. Of the subsidiary buildings, 31 more entirely built; 47 that were in progress during the preceding year were completed, and 28 others were commenced and carried to various stages of progress.

The two following Tabular Statements exhibit the expenditure throughout the province during the year, exclusive of that for establishments and stock in hand.

In the second statement the expenditure in former years is added:—

WORKS.	Lucknow Division.	Fyzabad Division.	Roy Bareilly Division.	Seetapore Division.	First Road Division.	Second Road Division.	Third Road Division.	Central Gaol Division.	TOTAL.

PART III.—RAILROAD.

66. A project for the construction of a line of railway from Lucknow to Cawnpore, without Government guarantee, was put forward last year, and Government liberally acceded to the request of the projectors for certain privileges to enable them to accomplish the undertaking.

Funds, however, were not forthcoming, and the original company resigned in favour of Mr. Palmer, who undertook to construct the line.

He too, however, abandoned the enterprise, and the Officiating Chief Commissioner feeling assured that no company in Oudh could complete the work, suggested to Government that the East Indian Railway Company might be disposed to connect Lucknow with their main line at Cawnpore; and though no reply has been received to this communication, it is hoped that the proposal may be favourably entertained.

PART IV.—IRRIGATION.

67. Under this head, there is nothing to add to last year's report.

PART V.—MISCELLANEOUS ROADS AND BRIDGES.

68. District roads and bridges have received much attention, and large sums have been expended on them, particularly in the Fyzabad and Khyrabad divisions. The roads have been subdivided into provincial, main district, and district. A detailed memorandum, showing the roads and the sums set apart for them is annexed, (*vide* Appendix.*) In Baiswarra there has been a fair amount of work done. In Lucknow the frequent change of officers has seriously retarded progress in this important department, and no works of any note have been constructed. In the Fyzabad district, 101 miles of new road have been made, and 50 miles repaired; one unfinished masonry bridge of three arches, each 25 feet span, one of two arches, each 14 feet span, and two of one arch 25 feet span, were completed; 47 pucca drains and 19 bridges from 10 to 20 feet span were constructed, besides nine temporary wooden bridges; one bridge with three arches, each of 22 feet span, and another with three arches, each of 35 feet span, have been undertaken, and are approaching completion, and heavy embankments have been thrown up as approaches to these bridges; a bridge of boats was also constructed across the Goomtee on the Fyzabad and Roy Bareilly road. * M (2).

In Gonda 60 miles of new road have been marked out; approaches to the wooden bridges have been made and metalled; one bridge of 30 feet span, and two of 15, with masonry abutments and timber superstructure, have been constructed, and 12 minor pucca bridges completed, or nearly so.

In Baraitch 30 miles of road have been raised; 12 large wooden bridges, two of them 200 feet span, have been built; 14 are in various stages of progress, and for 22 more the materials are on the ground.

In Seetapore 78 miles of new road have been made, and 73 miles repaired; four pucca drains and six timber bridges built. Captain Thompson has shown great ingenuity in constructing a bridge, of part trestles and part piles, over the Serayn, at Seetapore; it is 160 feet in length, and stood the rains well.

In Hurdui 116 miles of new road have been made, and 178 repaired; 17 pucca drains constructed, and two large bridges commenced.

In Mohomdee the old district roads have been repaired, and 97 miles of new road made, and six bridges constructed, one, a large pile bridge, over the Oel.

Bridges of boats were maintained over the Gogra both at Fyzabad and Byram Ghat, and for both a large number of new boats have been built, as the withdrawal of the country boats for these bridges was found to interfere most seriously with the trade to the eastward and Calcutta.

At Sultanpore, too, over the Goomtee, a bridge of boats was kept up; but it is now proposed to replace this by a pile-bridge 200 feet in length.

Several serais have been built on the main lines of communication, at a cost of 20,248 rupees.

The receipts and expenditure of the Road and Ferry Funds are as follows :—

DIVISIONS.	RECEIPTS.			DISBURSEMENTS.				
	Road Fund.	Ferry Fund.	TOTAL.	Roads.	Bridges.	Serais.	Establishments.	TOTAL.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Lucknow - -	39,942	25,834	65,776	17,220	22,467	250	3,199	43,136
Khyrabad - -	56,991	44,525	1,01,516	22,926	19,471	4,737	18,471	65,605
Baiswarra - -	47,424	22,626	70,050	37,875	17,518	973	5,600	61,966
Baraitch - -	63,609	63,533	1,27,142	28,516	59,286	14,288	5,832	1,07,922
Total - - *Rs.*	2,07,966	1,56,518	3,64,484	1,06,537	1,18,742	20,248	33,102	2,78,629

PART VI.—PUBLIC BUILDINGS.

69. The Commissioner's kutcherry at Fyzabad has been finished, and a similar building constructed at Roy Bareilly. A handsome nuzzool building has been fitted up for the Deputy Commissioner's kutcherry at Lucknow.

A district kutcherry, on a plan approved by Government, has been commenced at Fyzabad; and in different districts 32 new police posts have been completed, or nearly so.

The new gaols have already been referred to under that head. The temporary district buildings were repaired at a moderate cost.

SECTION V.—POST OFFICES.

70. District post offices were maintained as in the preceding year. The number of men employed is 368, the number of miles over which they travel 1,596, and the cost 18,750 rupees. The letters and covers delivered are said to be 162,655, and the number returned undelivered 37,974; but under the present system, sealed packets are received from and sent to district post offices, and these figures are not to be depended upon.

SECTION VI.—ELECTRIC TELEGRAPH.

71. There is nothing to be said on this subject.

SECTION VII.—MARINE.

72. No steamer has ascended the Gogra for many months, and there seems no immediate prospect of the establishment of a regular line of steamers. This is, perhaps, not much to be regretted, as, without feeders in the shape of good roads to the river communication, the speculation might not have proved remunerative; but by the end of the rains this want will be supplied to a great extent. The Fyzabad and Lucknow Road will be well advanced, and a great portion of it metalled, as will also the Lucknow and Byram Ghat Road and the road from Byram Ghat *vid* Seetapore towards Rohilcund will be passable. The Gogra is always navigable as far as Byram Ghat, which is nearer Calcutta, and 30 miles nearer Cawnpore than Allahabad is, and the voyage to Byram Ghat presents far fewer obstacles. Downward freight would be procurable if carried at fair rates. The charges hitherto have been double those on the Ganges, while there can be no doubt that sooner or later all European heavy goods for Goruckpore, Oude and Rohilcund, must come by the Gogra. The line is well worthy of the attention of enterprising capitalists; and the Officiating Chief Commissioner is confident that steam communication from Calcutta to Fyzabad and Byram Ghat will eventually prove a decided success.

SECTION VIII.—FINANCE.

N (2). 73. A statement in the prescribed form is appended, but the financial position of the province is really far more favourable than these figures make it appear. The Oudh treasuries pay the advances and expenses of the Opium Department, while the profit which Mr. Hamilton, opium agent, estimates, after deducting all expenses at 22,69,600 rupees on the season's out-turn, will go to swell the receipts of the Bengal Government.

Again, the import of salt from the North Western Provinces is, on a very low estimate, three lakhs of maunds per annum. The duty on this quantity at three rupees per maund is

is nine lakhs, which, though drawn from Oudh, is included in the salt revenue of the North West. Oudh, too, of course, gives its contribution to the Customs of the Bengal Presidency, although no data are available for estimating the amount.

The receipts from land revenue are nearly stationary, and no material increase will be obtained under this head till the regular settlement comes into force in several districts. Under assessed taxes there is a large decrease owing to the abolition of the duty on arts, trades and dealings. The receipts from Sayer also have diminished for reasons given under "Forests." Abkaree, opium and stamps all show an increase, especially the last, in which the increase is 40 per cent. The only increase in disbursements requiring notice, is in the Revenue Department; it is owing to the extension of the regular settlement operations which are now in progress in four districts; this item will continue to increase for some years, but the result of these operations will be a very large permanent addition to the land revenue. Both in military and police charges considerable reductions have been made, and will be carried much further during the current year.

The amounts under bills drawn and bills paid, are nearly alike. With regard to "adjusted receipts of," and remittances to and from other governments, owing to want of uniformity in the preparation of treasury statements, it is impossible to ascertain the result of these transactions; but the balance appears to be in favour of the Province. The Officiating Chief Commissioner believes that the new system of accounts is still imperfectly understood, and that there is considerable diversity of practice in classifying the different items of receipt and expenditure; and he, therefore, strongly urges that a competent officer of the Pay and Audit Department should be deputed to visit all treasuries, to see and correct what is amiss, and to give such instructions as are called for to insure uniformity in the preparation of accounts and statements in future. No cash remittances have been received from other governments except a small sum in copper coin, yet the cash balances have increased from 25,64,907 rupees on 1st May 1861, to 33,00,908 rupees on 1st May 1862, showing that the cash receipts during the official year have been, allowing for copper coins received, nearly seven lakhs in excess of the cash disbursements.

SECTION IX.—ECCLESIASTICAL.

74. The church at Gonda had doors fitted, floor laid, and a few other petty works executed to it during the year.

The Roy Bareilly church, of which only the brick-work was finished in 1860-61, was quite completed.

A church for Roman Catholics was entirely built in the Dilkhoosah cantonment, Lucknow.

SECTION X.—POLITICAL.

75. The Province has remained perfectly tranquil, and nothing has occurred during the year to excite the public mind or disturb the political atmosphere. The most interesting event was Lord Canning's last visit to Lucknow, which took place in November last. The immediate object of the visit was to receive an address from the British Indian Association of Oudh, on the question of female infanticide, which prevails to some extent chiefly among the Rajpoot clans. The talookdars had been some time in deliberation on the subject, and had drawn up certain rules for the suppression of this cruel and inhuman practice. These rules were laid before his Excellency; the most important was, that "every talookdar should take a solemn covenant from his tenants, binding them never to commit or countenance directly or indirectly, female infanticide in anywise whatever, and that, in the event of any one violating the covenant, be his rank or condition in life what it may, he shall forthwith be handed over to the laws, and excommunicated for ever from the pale of Hindoo society as a felon and an outlaw."

A durbar was held at Lucknow on the 5th November, and an address bearing the signatures of about 200 talookdars was presented and read by Colonel Durand, Secretary to Government in the Foreign Department, *vide* printed report of British Indian Association for 1861. The Governor General, in his reply to the address, approved generally of the measures proposed, but warned the meeting that "in accepting an aid beside and beyond the law, there was no compromise on the part of Government with so hateful a crime, and that if the result of the efforts of the association should not equal their expectations, or should be tardy in showing itself, the law would not be allowed to sleep, but would be enforced to the utmost power of Government, regardless of everything but the utter suppression of the abomination."

The rules, with unimportant modifications, have been introduced, and up to this time upwards of 55,000 persons have signed the covenant. It would be premature as yet to offer any opinion on the result of the measure, but it is certainly well meant, highly creditable to the talookdars of Oudh, and apparently well-calculated to promote the object in view.

The distinguishing feature of the Oudh policy, which was prominently alluded to last year, is the experiment of associating the great landholders and native gentlemen of mark with the officers of Government in the administration of the province.

As the measure is one of very great importance, and as it is known that some diversity of opinion prevails on the subject, the Officiating Chief Commissioner has deemed it advisable to transcribe the reports of all commissioners in full with the view of making known the views of the most experienced officers of the commission on the general working of the system. The Judicial Commissioner has recorded his opinion at considerable length in the 99th and subsequent paragraphs of his report already submitted to Government.

Colonel Abbott, Commissioner of Lucknow, reports—"There are few extensive talookdaree holdings, but the result, I consider, to be highly satisfactory; 621 cases, criminal, civil and revenue, were disposed of by them; 59 were heard in appeal or reviewed, of which only 16 were interfered with.

"Chowdree Gopal Singh, talookdar of Bangermow, in the Oonao district, disposed of more than two-thirds of this work himself, and is deserving of the Chief Commissioner's especial and favourable notice. His powers are not confined to his own talooka, but he has had made over to him the entire pergunnah of Bangermow." The Assistant Commissioner says, and I agree with him, that "the general fairness of his decisions, the easy access to redress in his court, have made his administration popular and successful.

"His cases have been well reviewed, and I think it most encouraging to find a native gentleman, unremunerated, entering into the administration of the country thus *con amore* with such excellent results.

"None of the other talookdars come any way near him in the amount of work disposed of, but they have all done their little satisfactorily. There is an inclination, I have observed, to be too lenient in criminal cases, but this might be expected."

EXTRACT from Report of Mr. *Simson*, Commissioner of Fyzabad.

"Para. 85.—In the criminal department, in the Fyzabad district, it has rather decreased, with the exception only of Rajah Roostum Shah's; for Rajah Madho Pertab Singh received criminal powers only from the commencement of the year. Their decisions have continued to give satisfaction; only two appeals were preferred, and the original order was maintained in both. It was necessary, however, to bring to your notice a case of Rajah Roostum Shah in which he allowed very great delay and other grave errors in procedure to occur, and the caution which was then administered will not be without its effect.

"86. The work done in the civil department has been nominal, but a beginning has been made by Meer Baquir Hoossein and Rajah Roostum Shah, and in time I trust the honorary assistants will appreciate these powers also.

"87. But by far the largest proportion of cases has been decided on the revenue side, and the number has considerably increased since last year. The total, I must note, however, includes the miscellaneous cases as well, which is very embarrassing. It were easy to separate the miscellaneous cases from the summary suits, but among the former I find such important cases as those for 'adjustment of rents,' as well as 'applications for copies,' and such like orders of course, and I am not at present in a position to distinguish the real case work."

"88. The number of cases decided by Maharajah Maun Singh continues by far the most numerous, and his decisions again present the salient points well chosen for remark in last year's report;—the appeals are few, but the proportion of reversals is very high. The maharajah continues to discharge these duties with the 'acuteness' and ability for which he is distinguished.

"89. Meer Baquir Hoossein is again next in order, and in some points of view his work comes out better than the maharajah's. The ratio of suits appealed is very low, and only one of his orders was interfered with.

"90. Rajahs Roostum Shah and Madho Pertab Singh, though inclined to be dilatory, have acquitted themselves fairly.

"91. Two talookdars, the Maharajah of Bulrampore and Sheo Bahadoor Singh of Kumyar, are invested with powers, but the latter has not yet commenced to try any suits. The former has decided a fair number of criminal and a few revenue cases in a very satisfactory manner, and continues to deserve the high opinion I have uniformly had to express regarding him both as an honorary assistant and a landlord.

"92. Sirdar Bikrumma Singh has been non-resident in Baraitch for the greater part of the year. Nisar Ally Khan, who is the son of the loyal Kuzzilbash, on whom the estate was conferred by Government, has received powers during the year, and though he is more inexperienced as regards our laws and system than I anticipated, he has begun well. He is well read in Persian, is a fair English scholar, and takes a pride in possessing these powers; and, being an energetic man and very well affected towards Government, I doubt not that, in the words of Major Steel, he will in time 'become a valuable aid to the district officer.'

"92½. In fine, I consider that the measure of entrusting these gentlemen with powers continues to produce on the whole very satisfactory results; while at the same time I have

have seen further reason to maintain the opinion I have already expressed, 'that their position in certain classes of cases makes impartiality on their part very difficult.' With the Chief Commissioner's sanction, they have been cautioned against entertaining suits in which their servants are personally interested, and if it were also distinctly ruled that they are debarred from hearing cases regarding the adjustment of cultivators' rent in which they are personally interested, in contradistinction to those in which a Pookladar or *bonâ fide* Thakadar is the real plaintiff, I think the risk of partiality would be very much reduced.

"93. Full advantage has been taken by Captain Reid in the Fyzabad district of the Chief Commissioner's recommendation to refer to talookdars not invested with powers all fitting cases connected with their estates, and no less than 115 cases are reported as having been satisfactorily disposed of in this way. It cannot be doubted that much useful assistance may be obtained by the deputy commissioner by adopting this course, if the plan is carried out with tact and judgment; but the cases referred must never be lost sight of, and a date, before which the plaintiff is to be satisfied on the petition returned, with a report, should invariably be fixed, else plaintiffs are apt to be worn out by delay, and other irregularities to occur."

EXTRACT from Report of Mr. *Tucker*, Commissioner of Baiswarra.

"Para. 69. The talookdars have generally performed their criminal work satisfactorily throughout the year. A great deal of their work is performed in a patriarchal way, and is not reduced to writing.

"70. Their revenue work should, in my opinion, be performed in an unofficial manner. No man sitting on the bench should decide his own cause.

"71. I take the opportunity of bringing to the notice of the Chief Commissioner the valuable services of Major Orr. Of the native honorary assistant commissioners, Rana ShunkurBuksh Singh still holds the first place. The Deputy Commissioner brings to notice, also, the services of Lall Sheopall Singh, the son and heir of the loyal old Rajah of Morarmow.

"72. I expect much assistance in the trial of sessions cases from Shahzadah Sahdeo Singh; from Baboo Ajeet Singh, of Tirowl; Baboo Surubjeet Singh, of Tekaree; Baboo Thakoor Pershaud Singh, of Tiloee; Rajah Humvunt Singh, of Kalakankur; and Baboo Ajeet Singh, the uncle of the Rajah of Pertabghur."

EXTRACT from Report of Colonel *J. Clarke*, Commissioner of Khyrabad.

"Para. 82. The Deputy Commissioner of Seetapore considers the progress made by these gentlemen in the highest degree creditable to them; he has examined many cases. He says, "The criminal convictions are double the acquittals, decrees for plaintiffs are six times the decrees for defendants in civil suits, and 17 times in revenue suits.' He also says, 'After remarking that people go into Talookdars' courts when they have a reasonable case to go on, it has been argued that suitors are deterred from appealing by fear of the talookdars' displeasure; but I think this argument is not tenable in the face of the countless instances in which men do complain against their talookdars in other than judicial cases."

Mirza Shumshere Bahadoor.
Mirza Aga Jan.
Banee Singh.
Thakoor Sheo Buksh Singh.
Thakoor Jowahir Singh.
Thakoor Gooman Singh.
Mirza Ahmed Beg.

"83. The Deputy Commissioner thinks, where all have done so well, it is invidious to praise a particular officer. Shumshere Bahadoor has done the most work. I consider Aga Jan deserving of commendation.

"84. The very indiscreet conduct of Thakoor Sheo Buksh Singh, of Kutesur, to the police, in a case where his interests were concerned, has been laid before the Chief Commissioner.

"85. I transcribe the 16th paragraph of the Report of the Deputy Commissioner of Hurdui:—'236 cases were decided by honorary assistant commissioners; the greater share of work fell upon Syud Mahomed Ushruff and Shumshere Bahadoor, the former having decided 73 and the latter 49 cases. Thakoor Lall Singh disposed of only four cases during the whole year. I examined a great number of the cases prepared by these gentlemen; the result was very creditable to them; only five cases were appealed, four from the decision of Mahomed Ushruff, and one from the decision of Chowdry Hushmut Ally. The decisions were all confirmed except in one case in which the order of Mahomed Ushruff was set aside. I beg particularly to bring to your notice the names of the following gentlemen who have distinguished themselves during the year:—Rajah Hurdeo Buksh, Shumshere Bahadoor, Fuzl Russool, and Syed Mahomed Ushruff.'

"86. Mr. Ross commends Rajah Unroodh Singh, of Oel, and Rajah Gunga Singh, of Bhoor; and I concur in thinking these gentlemen most excellent examples of their class. Mr. Ross thinks care should be taken not to hamper the honorary assistant commissioners too much with our rules and forms; this is the opinion I last year expressed."

A statement of cases decided by honorary assistants is appended.

STATEMENT of Cases tried by Honorary Assistant Commissioners.

TOTAL	812	253	1,415	51	8	136	37	6	77	14	2	48	11	7·86

It is unnecessary to expatiate upon the advantages of the system in a political point of view, as these are generally admitted; and the following remarks have reference solely to the conduct of the honorary assistants in the trial of cases:—

Civil cases were tried by honorary assistants last year for the first time, and a good commencement has been made. The amount of criminal work has greatly increased.

The results of civil and criminal trials and appeals are as follows:—

	Civil.	Criminal.	Revenue.
Total decided	253	812	1,415
Appealed	8	51	136
Confirmed	6	37	77
Reversed	2	14	48
Pending	–	–	11

These figures speak for themselves, and the convenience to the parties of having their cases disposed of without the intervention of Government Omlahs, and without the delay and expense of a journey to a distant station, can hardly be over-estimated. Some of the sections of the Penal Code lately introduced have been misunderstood, and mistakes made in consequence; but these have not been altogether confined to honorary assistants. In some cases there is room for suspicion that the honorary assistants, ignorant of forms and fearful of rebuke for errors, employ our old Omlahs and allow them to do too much. This practice cannot be altogether prevented, but will be discouraged as much as possible.

On the question of revenue jurisdiction there is some difference of opinion. The Commissioner of Baiswara says, no man sitting on the bench should try his own cause, and this opinion is shared by other officers of the Commission, who apprehend that this power might be abused, and might lead to the discredit of the system.

The

The Officiating Chief Commissioner is not prepared to say that such arguments, based on anticipation of what might probably occur, are not well founded; but, as far as can be learnt from general information, and from the result of trials, the anticipation has not as yet been fulfilled. Of 1,415 revenue suits decided, 136 were appealed; and of 125 disposed of, 77 orders were upheld and 48 reversed. The reversals were, therefore, 35·29 per cent. of cases appealed, but only 3·39 per cent. of cases tried. The per-centage of cases appealed to cases tried was low, only 9·31; and considering the encouragement given by the large proportion of orders reversed, and the notoriously litigious character of the tenants of some of the great landholders, there can be little doubt that nearly every man who really had any grounds to go upon did appeal. The paucity of appeals is, therefore, a favourable feature, and may reasonably lead to the inference that in the cases not appealed, with rare exceptions, substantial justice had been done. The Commissioner of Fyzabad, in his 87th paragraph above quoted, remarks upon adjustment of rent cases. It was never intended that honorary assistants should try such cases; and as soon as it was brought to notice that one of them had done so, the practice was checked, and instructions issued calling attention to the original rules, and clearly defining their revenue powers.

If European officers do their duty as they have done hitherto, the Officiating Chief Commissioner believes there is little fear that injustice will be done, or that, if done, it will not be remedied.

The talookdar alluded to by the Commissioner of Khyrabad was deprived of his powers on the recommendation of the Officiating Chief Commissioner, for permitting his retainers to take by force certain market dues claimed by a neighbour as well as himself, and which the native police officer had collected with the consent of both parties, and was about to deposit with a third party pending the settlement of the dispute.

Though the Officiating Chief Commissioner has in some instances had occasion to find fault, he considers that the general results of the measure are encouraging, and that, on the whole, the honorary assistants have discharged their duties satisfactorily.

The honorary assistants who are mentioned with praise by Commissioners and Deputy Commissioners have well earned the commendations they have received. The following are specially deserving of notice:—Maharajah Dirghejee Singh of Bulrampore; Maharajah Maun Singh, who decided a large number of cases; Rajahs Hurdeo Buksh, Unroodh Singh, Jugpal Singh, and Gunga Singh; Rana Shunkur Buksh; Lall Sheopal Singh, Meer Baquir Hoossein; Shumshere Bahadoor; Fuzl Russool; Mahomed Ushruff; Aga Jan, and Chowdree Gopal Singh, who is very highly spoken of.

With the view of dispelling the doubts adverted to in paragraph 53, the Officiating Chief Commissioner drew up the draft of a Bill to provide for the succession to, and the rights in respect of certain talookas and granted estates, and for the jurisdiction of the Courts of this province in suits relating to land. The Bill, somewhat modified in its details, is now under consideration.

It is proposed to extend the principle of self-government to some extent to cities and towns; and provision for so doing will be made in the draft of an Act which the Officiating Chief Commissioner is now preparing for the regulation of municipalities in Oudh.

Political—Nepaul.

76. The revised line of Nepaul frontier has been definitely marked out; it juts awkwardly into our territories in several places, and the action of the police in the pursuit of criminals is sometimes seriously embarrassed in consequence.

Trade.

77. Last year vast quantities of grain were exported to the famine districts in the north-west, this year the trade has taken an easterly direction, and more grain has been sent down the Gogra and Goomtee than has crossed the Ganges. The other principal exports are peas, pulse, linseed and other oilseeds; also opium, ghee, saltpetre, jute, hides, horns, lac and catechu to Calcutta; molasses to the North West; cloth of tanda manufacture, which is very durable, to Nepaul and the North West; saul timber, chiefly for railway purposes, to Cawnpore. The imports are English wines and stores of sorts, English cloth and yarn (which has partly displaced country); metal ware of different kinds from Calcutta and Mirzapore; salt and cotton from the North West; cattle, copper and iron in small quantities, and spices from Nepaul.

Appendices (O 2) to (R 2).

Tables of estimated exports and imports have been submitted for the Seetapore, Fyzabad and Gonda Districts, and copies are annexed; though probably not very accurate, they are of interest, as conveying a good general idea of the trade of the country. Considerable progress has been made in most districts in introducing an uniform scale of weights and measures.

The Officiating Chief Commissioner fears that the development of trade has been seriously retarded by the practice of impressing carriage for the Commissariat and other purposes. The amount of wheeled carriage in the province is very limited, and is not likely to increase rapidly if liable to indiscriminate seizure.

Traders in the North Western Provinces send large quantities of salt in very fine carts which are in great favour, and frequently impressed when about to take back grain and molasses; they are kept an indefinite period, and perhaps discharged eventually at some distant station. The course of trade is thus deranged, a feeling of insecurity engendered, and merchants discouraged from repeating their ventures. With the view of mitigating this evil as far as possible, the Officiating Chief Commissioner has strictly prohibited the seizure of carriage except for troops on the march; but he thinks some relief might be given by the commissariat authorities who might avail themselves of the carriage kept up for moveable columns for the conveyance of their stores, or arrange to make their despatches smaller and more frequent when this could be done without detriment to the public service.

CHAP. XV. Oudh.

During the cold weather Mr. P. Saunders, Commissioner to report on the Cultivation of Cotton, visited the Province; he considered the soil generally most fertile and well adaped to the growth of cotton; he did not confine his enquiries to cotton, but extended them to everything connected with the capabilities of the Province; and his Report, which has been published, contains much interesting information on a variety of subjects. Mr. Saunders shared the general opinion that if Manchester wants plenty of cotton from India, she must put her own shoulder to the wheel, and send men and money to make the necessary arrangements in India.

Mr. Saunders complained of the inconvenience he experienced in crossing rivers; but he was then travelling by an unfrequented route in a very wild part of the country, where it would have been waste of money to construct bridges of boats, such as are maintained on the main lines of communication, where the amount of traffic is such as to justify the necessary outlay.

SECTION XI.—MILITARY.

Appendix (S 2).

78. On 1st May 1861 the strength of the military force in Oudh was 11,341 of all ranks; on the 1st May 1862 it was 9,255 (*vide* Return appended), showing a reduction of upwards of 2,000 men. The decrease is entirely in the native portion of the force, the strength of the European troops being almost exactly the same as last year.

The station of Gonda is, however, only temporarily occupied, and it is believed that the European regiment now there will shortly be removed.

A regiment of native infantry was lately moved from Agra to Lucknow, because one regiment was considered by the military authorities insufficient for the military guards, causing of course a sensible increase of expenditure under this head.

SECTION XII.—MISCELLANEOUS.

PART I.—AGRICULTURE AND HORTICULTURE.

79. The Agri-Horticultural Society of Oudh was constituted in December 1860, and commenced operations in April 1861.

The first consignment of English seeds was unfortunately a total failure; this failure, though not confined to Oudh, has been very discouraging, especially to native subscribers, many of whom have withdrawn.

Cotton.

80. Among the experiments, cotton has, naturally received by far the greatest share of attention. In the end of May the secretary sowed a quantity of both New Orleans and Egyptian seed, and to make the experiment on cotton cultivation as complete as possible he also sowed some native cotton, which he treated in the same way as the foreign.

Of the New Orleans seed about one in a thousand only germinated, and, on the contrary, of the Egyptian about one in a thousand only failed. The results were the same throughout the Province, and can only be accounted for under the supposition that the American seed was originally bad, or had been damaged somehow, as the seed received the year before came up very fairly.

The Egyptian and native cotton grew well and produced a large number of pods; but owing, perhaps, to the unusual amount of rain that fell last year, many insects of all kinds were generated, and the pods, especially the Egyptian, were to a large extent destroyed by the ravages of a small red maggot.

The Secretary thinks more can be done with seed from other parts of India than with foreign seed, and that, while striving to introduce foreign cottons, the improvement of the native kinds should not be lost sight of. Attempts were made to produce a hybrid between the New Orleans and native cotton, with the view of procuring a hardy plant with a good staple; they failed, but will be repeated. The Secretary next tried hybridization between the Egyptian and New Orleans kinds, and succeeded in fertilizing two pods of the former with the pollen of the latter; they ripened and produced healthy seed, which will be sown next year.

These experiments in hybridization, though tedious and requiring a long time to test their effects, may produce very favourable results.

Further experiments are being made with acclimatized seed as well as with some procured from Malta. The cotton crops in the garden this year are remarkably fine and promising.

Maharajah Maun Singh carefully prepared some land near his residence, which he subdivided and sowed month by month with the view of ascertaining the best season for sowing; the results have been encouraging, and though the experiments were not on a very large scale, he is sanguine that cotton cultivation in Oudh, if properly attended to, will prove highly remunerative. It is now generally admitted that it was a mistake to sow the foreign cotton seed just at the beginning of the rains, as a heavy fall, such as we had last year, immediately after sowing, will destroy the seed or wash it away. The best plan seems to be to sow a month or two before the rains, and to irrigate the land once or oftener.

This

This gives the plant time to take firm root, and when the heavy rain does come, it is strong enough to withstand its violence.

81. Attention has been given to the propagation of the mulberry tree with the view of introducing the silk-worm throughout the province at a future period. Several thousand cuttings of two good kinds have been received from Seharunpore, and in a few years the Lucknow garden will be able to furnish the whole of Oudh with this valuable tree. Mulberry.

These and various other experiments in the Lucknow garden, of which an account is given in the Society's printed report, have all been conducted by Dr. Bonavia, late secretary, who is a highly accomplished botanist, and exceedingly zealous.

82. In February 1861 Colonel Clarke procured a small supply of Cashmere silk-worm eggs from Mr. Cope of Umritsur, and made them over to Mr. P. Carnegy, who undertook the charge; the worms were kept in an empty room in his house, and the trays and baskets were of the same kind as used in Bengal. The following memorandum of his proceedings, and the result, was given by Mr. Carnegy:— Silk-worms.

"On the 24th of February I received from the Commissioner a small box of silk-worm eggs of the Cashmere variety. On that day a few of these eggs were hatched, and they continued hatching till the 3d of April, after which date about a hundred eggs remained, which have shewed no signs of vitality. The worms were at once supplied with mulberry leaves, and fed well and regularly, except at the intervals of changing their skins. The worms continued very healthy until the 29th of March, when the first cocoons were spun. On the 10th of April there were 1,500 cocoons, and on the 27th of April, when the last cocoons were formed, the number amounted to 3,100. The cocoons first formed were very good, indeed superior to any I have ever seen, but as the heat increased the quality deteriorated much, till the last formed cocoons were not better than the common Bengal cocoons. Some of the last hatched worms spun prematurely, and went into the chrysalis state after surrounding themselves with a mere film of silk. From this it seems that it would be advisable to force the hatching, so that all the cocoons would be spun by the 1st of April. The irregularity of hatching has been the only drawback, and this, I think, would be remedied by exposing the eggs to a moderate heat about the middle of February. A plentiful supply of mulberry leaves was always procurable, and it has been fairly proved that the worms will thrive on them.

"Five hundred of the Cashmere cocoons have been sent to Bengal to be spun into silk, and reported on. Nothing has been heard by me about the result as yet, but, judging from some silk wound off by myself in a rough manner, there is every reason to expect that it will be favourable."

Some of the cocoons were sent to Mr. Cope at Umritsur, who describes them as very beautiful, and of excellent quality. The cocoons sent to Bengal were also favourably reported on. Mr. Turnbull, of the Ghuttal establishment, writes:—"They are certainly very fine and far superior to any thing of the kind in Lower Bengal. If they are from the Cashmere worm they have deteriorated about 56 per cent. and are much smaller, as 100 cocoons weigh 3½ tolahs, while those sent by Mr. Cope from Cashmere, and which elicited such praise from Count Frieschi, weighed 5½ tolahs. However strange it might appear, your cocoons have yielded more silk; 400 cocoons producing 2⅜ tolahs, while those from Cashmere 9½ annas. I consider your silk as good as any I have reeled from Cashmere and elsewhere, and which I have forwarded to you by Dâk Banghy."

The experiment is so far very promising, and arrangements have been sanctioned for continuing it on a larger scale.

83. Horticultural gardens have also been kept up at the head quarters of all districts. Experiments with New Orleans cotton were tried in all of them, but in all, as in Lucknow, the seed completely failed. Gardens.

84. Hemp is grown extensively in Trans-Gogra, where the soil is very favourable for the production of this plant; the cultivation is capable of great expansion, and it is certain to become one of the principal exports of the province; it was proposed to try Punjab acclimatized seed this year, but unfortunately none could be procured. Hemp.

PART II.—FORESTS.

85. Our acquaintance with the Oudh forests was very imperfect, but it was known that, although the best tracts had been ceded to Nepaul, many forests producing valuable timber still remained on our side of the border.

A superintendent was therefore appointed to look after them, and joined his appointment in September last. A survey of the forests was at once undertaken with the view of enabling the superintendent to ascertain their total area, to separate the tracts which it was desirable to retain as saul preserves from those which were better suited for jungle grants, as well as to arrange a plan of operations for making timber available to the public, and for the general conservancy of the forests. It was expected that this survey would be completed within the year, but this expectation has not been realized; only one-fourth of the whole estimated area has been surveyed and laid out in 68 tracts with about 418 miles of demarcation.

The survey has already been reported on, the advantages of completing it within the year pointed out, and application made for sanction to the necessary outlay.

The Oudh forests have hitherto suffered much from the practice of girdling trees for the sake of the resin, young saplings too were often cut for fences and other purposes; these practices have been checked, and a few rules promulgated defining the law of trespass as applicable to the forests, and making known the penalties to which trespassers are liable under the penal code.

The superintendent has been invested with the powers of a 1st class subordinate magistrate. Great damage is done by a gigantic creeper which abounds in the forests, and attacks many trees, and sooner or later destroys them; these creepers must be removed, and though a few strokes of the axe will kill them, they are so numerous that the cost will be considerable; under the present system the forests are closed to contractors. The forest department fells the timber and conveys it to the nearest convenient ghaut, where it is sold by auction. It was originally intended to take only the main trunk of the tree, but subsequently it was found expedient, for the purpose of utilizing the refuse timbers, to convey to market sawn timber likewise.

The estimate of forest receipts and expenditure is as follows:—

Divisions.	Collections.		Disbursements.		Net Receipt credited to Government.		Remarks.
	1860-61.	1861-62.	1860-61.	1861-62.	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	
Khyrabad - -	91,439	61,735	6,575	40,561	84,864	21,174	
Baraitch - - -		19,361		552		18,809	
Total - - -	91,439	81,096	6,575	41,113	84,864	39,983	

The present system of working the forests being entirely new, the superintendent did not consider it prudent to enter on it too largely all at once, but preferred introducing the system gradually, while himself gaining local knowledge and training the establishment to the new order of things; and the operations of the year have, therefore, been limited.

The following is a statement of timber felled and carted to depôts on the Sardah River:—

No.	Description of Timber.	Size.	Cubic Contents.	Remarks.
1,221	Saul logs - -	25′	37,787	Mean girth 60 inches.
5,782	Sleepers - - -	10′×12″×6″	28,910	Sawn timber.
231	Sleepers - - -	10′×10″×4″	635	
181	Beams - - -	20′×12″×12″	3,620	
742	Kurries - - -	10′×5″×4″	1,546	
86	Kurries - - -	10′×4″×4″	93	
	Total Cubic Feet - - -		72,591	

This timber at the very low estimate of twelve annas per cubic foot is worth 54,443 rupees. There are some tracts of forest where the trees have been injured by girdling for the purpose of extracting the resin; they are rotten at the core and not fit for exportation as logs, but they are nevertheless well adapted for railway sleepers; hitherto saul only has been issued for sleepers, but there can be no doubt that good sleepers might be made of other woods, particularly the stunted sisoo and the saj or sene.

These tracts may perhaps be exempted with advantage from the operation of the rule that the forests should be closed, and the superintendent is now in correspondence with a firm of railway contractors regarding them.

On the completion of the survey the superintendent proposes to sub-divide the forest tracts into about 30 equal compartments to be worked in rotation, so that each compartment can be closed for 29 years, which will give ample time for the smaller sized trees to become fit for felling; it is not intended to cut any of less than 50 inches in girth.

This scheme, however, is open to obvious objection, and will probably be modified when all the tracts have been surveyed and reported upon.

86. Annexed are statements of grants of waste land (distinguishing those under the old rules from those under the new), and of payments of purchase money.

Fyzabad - - -	—	—	—	—	—
TOTAL - - -	23	4,709	- -	4,177 4 -	—

Considerable sums were received just after the close of the official year, and several lots have lately been sold, chiefly to Europeans. In the Seetapore district there was much competition at these sales, and one lot of 1,700 acres was knocked down at 15 rupees per acre. The purchaser was proprietor of the land bordering upon the jungle, and its acquisition was, therefore, a great object to him; but as other parties bid nearly as high, the Deputy Commissioner considered that the selling price was the fair market value of the land; but the Commissioner differed from this opinion and looked upon the rate as quite exceptional,

and more than would be paid for good cultivated land; and it is probable that his view of the case is correct, and the landholder paid so high a price because the land was near his residence.

The grants of waste land in the Khyrabad division are numerous, and more have lately been made, several of them to European applicants. In one district no fewer than 21 Europeans have acquired or are about to acquire lands. These gentlemen have a fair field before them; they will receive every encouragement from the local authorities, and it is hoped that the praiseworthy spirit of enterprise they have displayed may be rewarded with success.

The only other portion of the province where any considerable opening for European capital and energy exists is in the Trans-Gogra districts, where there is a great deal of waste land; but till the Saul preserves have been surveyed and demarcated, it is impossible to say what tracts will be available for grants.

Some native grantees have greatly exerted themselves in bringing their grants under cultivation, particularly Rajah Gunga Singh, of Bhoor, and Fuzl Russool, a Talookdar of the Hurdui district; the latter last year built six villages, settled above a thousand cultivators in them, and cleared and brought under the plough over a thousand acres of jungle land. Other grantees also are known to have been very energetic, but they have not been specially brought to notice by district officers.

PART III.—SURVEYS.

87. The Demarcation Department had got so far a head of the regular survey, that it was deemed expedient to reduce the establishments, and confine their operation to certain districts.

The amount of work done is, therefore, considerably less than in former years. The whole of the Durriabad district, one tehseel of Lucknow, and one of Hurdui, have been demarcated, making in all 2,187 square miles, divided into 2,572 estates, for each of which a separate map has been prepared. The average cost per square mile is *Rs.* 29. 3. 5., considerably in excess of the previous year, when it was only *Rs.* 20. 1. 11. This excess is partly attributable to the loss of time in moving establishments from Durriabad to Hurdui, and partly to the fact that when the establishments were reduced, a corresponding reduction could not immediately be effected on the cost of European supervision.

From 1st May 1862 a remodelled and greatly reduced establishment has been sanctioned. Including the operations of former years, 9,004 villages, with an area of 6,720 square miles, have been demarcated and are ready for the revenue surveyors, in addition to the work they have on hand, being more than two years' occupation for three surveys at last year's average; but in the eastern districts the progress of the survey may be slower, as the villages are very small. There were 230 boundary disputes, of which more than one-half were about waste land and marshes: 216 appeals were preferred, of which 188 were decided. The decisions were upheld in 166 cases, and modified or reversed in 22. The work allotted to the reduced demarcation establishment is to maintain the boundaries in districts not yet professionally surveyed, to proceed gradually with the demarcation of other districts, and to arrange to prevent any obstruction to the work of the revenue surveyors. The revenue survey has been carried on in the districts of Oonao, Pertabghur, Lucknow and Roy Bareilly.

In last year's report the areas surveyed in 1860-61 were estimated at 1,180 square miles in Oonao, and 1,048 in Pertabghur. The calculations for area had not then been closed, and the estimates were not very correct. The actual out-turn of the season was as follows:—

	Villages.	Square Miles.
Oonao	800	926 by Colonel Vanrenen's party.
Pertabghur	1,450	1,046 by Captain Anderson's party.

During 1861-62 Colonel Vanrenen completed the survey of the Oonao district, and nearly one-half of Lucknow, comprising in all 1,070 villages, with an estimated area of 951 square miles. He reports favourably on the Hudbust maps, and states that few discrepancies have been found between them and the professional boundaries.

Captain Anderson completed the district of Pertabghur, and surveyed about two-thirds of Roy Bareilly, making the total work for the season 1,378 villages, with an area of 1,228 square miles, being an increase of nearly 20 per cent. over the work of the previous year, which is satisfactory, especially as it was accompanied by a slight decrease of expenditure.

The field measurements were carried on as last year under the superintendence of deputy Commissioners, except in Lucknow, where Mr. Kavanagh had charge, in addition to his demarcation duties; in both Lucknow and Roy Bareilly operations commenced towards the close of the year.

The

The following Table shows the progress made and cost of survey:—

Districts.	Number of Mouzahs entirely Surveyed.	Number of Mouzahs partially Surveyed.	Total Number of Acres Surveyed.	Cost of Survey.	Average per 1,000 Acres.	Remarks.
				Rs.	*Rs. a. p.*	
Lucknow - -	81	57	83,423	445	101 3 8	
Oonao - - -	1,111	35	7,88,852	60,106	76 3 1	
Roy Bareilly -	83	104	49,707	7,411	149 1 1	
Pertabghur - -	1,417	120	6,56,454	57,240	87 3 1½	
TOTAL - -	2,692	316	15,78,436	1,25,202	84 6 3	

The average was very high in Roy Bareilly for the first two or three months, till the work got into full swing; but it is now as low as in other districts.

Settlement operations will be commenced in Fyzabad also on the 1st October next.

PART IV.—CONSERVANCY.

88. The levy of Choongee has, as last year, been confined to towns and considerable bazars, in which a town police was kept up. The rate was reduced on several commodities, and a very large number of minor articles were altogether exempted, with the view of making the tax as little vexatious as possible. A great falling off in receipts was looked for, but it has not taken place; on the contrary, previous receipts have been fully maintained, giving ground for belief that the general increase in the trade and material prosperity of the province, has been sufficient to compensate for the heavy reductions and exemptions.

The receipts and disbursements from Choongee, and other municipal funds, are as follows:—

Divisions.	Receipts.				Disbursements.			
	Municipal Fund.	Choongee.	Nuzzool and Local Agency.	Total.	Police.	Conservancy.	Local Improvements.	Total.
	Rs.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*
Lucknow - -	5,335	2,19,258	1,34,853	3,59,446	1,22,656	38,850	2,01,214	3,62,720
Khyrabad - -	- -	37,865	4,397	42,262	12,647	6,737	27,042	46,426
Baiswarra - -	- -	7,582	3,108	10,690	3,763	2,303	822	6,888
Fyzabad - -	1,506	72,157	15,626	89,289	21,286	6,909	30,401	57,596
TOTAL - *Rs.*	6,841	3,36,862	1,57,984	5,01,687	1,60,352	53,799	2,59,479	4,73,630

The disbursement for city police, *Rs.* 1,17,595. 2. is a very heavy item; but large reductions have been made in the force, and the estimated cost for the present year is 97,332 rupees.

The conservancy establishments in Lucknow and other cities and towns have been carefully supervised, and much attention given to arrangements for draining and keeping the streets thoroughly clean, though a good deal yet remains to be done in this line.

The surplus, after defraying the cost of police and conservancy, has been appropriated to various public works and improvements. In Lucknow large grants have been made to the Episcopalian and Roman Catholic churches and other public buildings, including a museum and spacious serae, and also to the Agri-Horticultural Society's garden. Measures have also been in progress some time for the establishment of an asylum for indigent Europeans.

In Fyzabad the entrances to the city from Allahabad and Lucknow have been greatly improved, a fine old gunge repaired and made habitable; roads metalled connecting the Chouk with Ajoodhya and the Gogra, and also with the Imperial road to Allahabad, and a grant of 4,000 rupees was made to the soldiers' garden in cantonments. In other districts many of the station and city roads have been repaired, bridged and metalled; main streets have been widened and improved; and a number of seraes and gunges have been built, and various minor improvements have been effected. In the Baiswarra division the funds are limited, and very little was available for local improvements. Several works of public utility

utility have been constructed by private individuals. The talookdars of Oudh are constructing a very extensive and commodious serae or dhurmsala, to be named after Mr. Wingfield; it will be an elegant and useful building; the cost is estimated at considerably over a lakh of rupees. The Maharajah of Bulrampore has built a handsome bazar called Wingfield Gunge. Mr. Jacob Johannes has also constructed a gunge at a cost of 5,000 rupees, and Raja Sheodeo Singh has expended 6,000 rupees on a similar work. In Oonao 3,000 rupees, and in Durriabad 5,415 rupees have been expended on wells, tanks, gunges and temples, none requiring special notice.

Rs. 6,100 in Hurdui, and 5,595 rupees in Seetapore have been expended on works of the same description.

PART V.—DISPENSARIES.

89. These useful institutions have been successfully worked, and have increased in popularity. European officers, as well as talookdars and other members of the native community have continued to subscribe liberally to them. The managing committees are composed of the Commissioner as *ex officio* President, the Deputy Commissioner and Civil Surgeon *ex officio* members, European gentlemen and officers, talookdars and other natives of respectability.

The annexed statement, Appendix T. 2, shows that the total number of patients treated was 53,700, of whom 2,789 were in-door, and 50,911 out-door patients; of these, 34,469 were cured, 3,795 were relieved, 185 incurable, 342 died, 13,523 result not known, and 1,389 remaining.

The receipts and expenditure were as follows:—

Divisions.	Receipts.	Expenditure.	Balance.	Remarks.
	Rs.	*Rs.*	*Rs.*	
Lucknow - - -	25,633	14,068	11,565	
Khyrabad - - -	10,752	8,300	2,452	
Baiswarra - - -	10,570	5,422	5,148	
Fyzabad - - - -	8,932	4,887	4,045	
Total - - *Rs.*	55,887	32,677	23,210	

In Lucknow there are three dispensaries, viz.:—

The Huzrutgunge hospital, the City hospital and the Yoonanee hospital, where patients are treated on the Greek system.

The patients were as follows:—

	In-door.	Out-door.
Huzrutgunge - - - - -	250	10,609
City - - - - -	641	8,519
Yoonanee - - - - -	250	14,581

Many important operations have been performed both in the city and Huzrutgunge hospitals. There have been numerous deaths in the city hospitals, which Dr. Douglas satisfactorily accounts for by saying that these are mostly cases of poor wretches brought in by the police, having been found lying about the streets in the last stage of disease when treatment was hopeless. A fine building has been constructed at Seetapore, at a cost of 7,700 rupees, of which 500 rupees was contributed by Government, and the rest by private individuals. In Hurdui also a good dispensary has been built; one public-spirited talookdar, Mahomed Ushruf, who has also distinguished himself by his zeal in the cause of vaccination, gave the munificent donation of 1,000 rupees.

The Fyzabad dispensary has been greatly improved and enlarged; a spacious room capable of accommodating 30 in-door patients, an eye ward, operating room, and verandah, have been added; a building at a convenient distance has also been fitted up as Lock hospital.

At Gonda a new building is nearly complete, the cost having been defrayed from subscriptions principally by talookdars, supplemented by the Government grant of 500 rupees.

Dr. Whishaw at Fyzabad performed 62 capital operations, of which five only were unsuccessful, and Dr. Bensley of Baraitch performed 20 without a single casualty, besides operating for cateract in 30 cases.

Both these officers bear testimony to the extraordinary efficacy of bin iodide of mercury as a cure for goitre. Though the application is a very painful one, and has in many cases to be repeated, the success of the treatment attracts large numbers of those who are affected with this unsightly appendage, and no fewer than 2,758 persons came for treatment to Baraitch alone.

The progress in vaccination has been generally unsatisfactory, the people have a strong prejudice against it, and they have not yet had time to see its advantage in successful cases; very many cases too have failed owing to the inferior quality of the lymph, and this may have retarded the progress of the measure. It has been difficult hitherto to secure the services

services of respectable men as vaccinators, as they were engaged for four months only; henceforward Government have sanctioned their retention throughout the year, and it is hoped that next season's returns will show an improvement; but time, patience and perseverance, aided by the co-operations of enlightened and influential natives, are required to induce a general resort to this useful precautionary measure.

CONCLUSION.

90. In conclusion, it only remains to record the Officiating Chief Commissioner's opinion of the officers of the commission.

Mr. George Campbell, Judicial Commissioner. The officiating Chief Commissioner has already expressed his great admiration of the hearty zeal with which Mr. Campbell conducts the executive duties of his department. He is constantly on the look-out to introduce improvements in the conduct of business, and his supervision of the courts subordinate to him is unremitting.

Colonel Abbott, Commissioner of Lucknow, has performed his multifarious duties with his usual ability and hearty energy. The Officiating Chief Commissioner has noticed with great satisfaction the careful attention paid by him to cases regarding rights arising in the process of settlement of Oonao, many of them involving points of considerable difficulty. His recorded decisions are superior to those of any other officer in the important respect of giving such descriptions of the cases from their beginning that the Officiating Chief Commissioner is seldom obliged to call for the vernacular papers in order to understand the nature of the suits.

Colonel Clarke, Commissioner of Khyrabad. A very practical officer, of sound judgment and earnest honesty of purpose. He has resigned the service since the close of the year, and the province has lost one of its very best officers, one in some respects unequalled.

Mr. Tucker, Commissioner of Baiswarra, is a very good judicial officer, but the Officiating Chief Commissioner is not altogether satisfied with the amount of his work, or the efficiency of his supervision; he is rather inclined to point out what he thinks ought to be done without seeing that it is done. His recorded decisions are often not intelligible by themselves, and the Officiating Chief Commissioner has very frequently occasion to look into the vernacular papers in order to understand them.

Mr. Simson, Commissioner of Fyzabad. An excellent officer of sound judgment, and with whose very careful performance of his duty, especially that of superintendence, the Officiating Chief Commissioner has had frequent occasion to be much pleased.

Captain Reid. The Commissioner, Mr. Simson, speaks in the very highest terms of this officer, and has not said a word too much in his praise. For systematic hard work, patient investigation and correct judgment, he has no superior. He has acted as Commissioner for three months during the year, as Inspector General of Police in the preceding one, and has since declined the permanent appointment, and is now officiating as secretary.

Mr. Capper. His late Commissioner, Mr. Tucker, says he is sorry to lose him; and his present one considers him a most accomplished and valuable officer. He has very great ability; but the Officiating Chief Commissioner does not think he makes a sufficient use of it. Whenever he takes any particular work in hand he does it thoroughly well.

Captain Thompson. The Commissioner, Colonel Clarke, remarks as follows:—"Captain Thompson's value as an administrative officer has before been frequently acknowledged, and his increased experience is adding to his value as an officer; he has taken pains this year to attend to forms and details, which he was at an earlier period of his service not disposed to regard sufficiently."

Captain Thompson is an officer of great ability, but not with a corresponding determination to work; the Officiating Chief Commissioner was glad to learn lately from Colonel Clarke that for the past few months Captain Thompson had shown more appplication: that is all he requires to be a first-rate officer.

Major Steel. His Commissioner, Mr. Simson, speaks of this officer as follows:—"The investigation of his cases by Major Steel was thorough, his judgment was good, the success of his kham management deserves especial mention, and his interest in all that concerned the prosperity of his district was great; and if his procrastination has occasionally tried my patience, I have always attributed it to the ill-health he has at times been affected with. The District has now lost the benefit of his services; but I hope he will return in due time with renovated health, and resume his appointment."

Notwithstanding his occasional procrastination, due to ill-health, rendering him afraid to attack some subjects, the Officiating Chief Commissioner considers him as one of the very best officers in the province, certainly one of the most hard-working and best liked by the inhabitants of his district, with whom, high and low, he was a general favourite. The Officiating Chief Commissioner much regretted his departure on leave to Europe.

Major Thurburn. His Commissioner, Colonel Clarke, speaks as follows of this officer:—"Major Thurburn held charge of the Mohomdee district for ten months, and then left for Europe on sick certificate. He was very short-handed in assistants the greater portion of

the year; he is a thoroughly hard-working officer who originated and carried out much that is useful; he took great interest in encouraging the settlement of Europeans on the waste lands; his judicial decisions are careful and well considered."

The Officiating Chief Commissioner believes this to be generally correct.

Captain Perkins. His Commissioner, Mr. Tucker, merely thanks him for promoting trade by establishing a depôt for merchandise in addition to the thriving market which bears his name. Captain Perkins has done well in these matters, but deserves much more praise than that so meagrely accorded him. He has had charge of a troublesome and heavy district, with sometimes insufficient assistance, and a greater proportion of his work than of many other Deputy Commissioners has come before the Officiating Chief Commissioner, who, although finding fault with him in one or two matters, entertains so high an opinion of his sound steady judgment and careful attention to his duty that he selected him to officiate as Deputy Commissioner of Lucknow during Mr. Capper's absence. Colonel Abbott, the Officiating Chief Commissioner, observes, that he considers Captain Perkins a steady reliable officer.

Captain Ross. His Commissioner, Mr. Simson, speaks of him as a very zealous officer, taking much interest in his district, and this is true. He could ill be spared from Gonda, which he has managed remarkably well upon the whole, though apt to be rather hasty in his conclusions and too lenient to his Omlah, errors which experience will remove.

Mr. Clifford. His Commissioner, Colonel Abbott, speaks as follows of this officer:—"Mr. Clifford, the Deputy Commissioner, has been conducting the revenue settlement. Of his excellent qualities I need not remind the Chief Commissioner. They are as well known to him as to me. Yet it is a pleasure to have it in my power to name him prominently."

The Officiating Chief Commissioner heartily concurs in entertaining a very high opinion of Mr. Clifford, who has had the very onerous duty of conducting the settlement of Oonao, in which he has exhibited remarkable patience, method and judgment. It is scarcely possible that any officer could have given more satisfaction to the people and his superiors than Mr. Clifford has done.

Captain Chamier. The Officiating Chief Commissioner thoroughly concurs with Colonel Abbott in considering Captain Chamier a most valuable officer, well acquainted with all classes of the people. He was a little deficient in experience, but his departure on sick leave was a great loss to the province.

Mr. Lindsay. His Commissioner, Colonel Clarke, speaks as follows of this officer:—"Mr. Lindsay had charge of the Hurdui district throughout the year: he is a most hard-working officer, most punctual and expeditious in the despatch of business; he has now a thorough knowledge of his district, and manages it exceedingly well. His over-zeal led him into a mistake in the new system of Abkaree, but that has been rectified, and I trust this will not be held to debar him from receiving the Chief Commissioner's commendation for his general charge. I consider Mr. Lindsay has made a great advance, both as a judicial and revenue officer, in the last year."

So far from thinking ill of Mr. Lindsay for his mistake in Abkaree, the Officiating Chief Commissioner's opinion of him has very greatly risen on that account, for instead of turning rusty, as some officers would have done, he at once adopted the prescribed course with such judgment and good-will as in a few months to render his district almost the model one of the province in regard to Abkaree, and this is no slight praise considering that his district is bounded on two sides by the North Western Provinces, where the duty on spirits is very much lower than in Oudh. But in every thing Mr. Lindsay shows the same judgment and perseverance, and Colonel Clarke does not speak too highly of him.

Assistant Commissioners, 1st Class.

Mr. Anderson. Colonel Abbott remarks that this officer is intelligent, industrious and careful, and with a little more experience will be all that is desired. The Officiating Chief Commissioner has great confidence in Mr. Anderson's sound judgment and careful mode of work, and has sent him to take charge of Baraitch, where he will, it is hoped, reconcile the inhabitants to Major Steel's loss.

Mr. R. M. King. Mr. Tucker remarks of this officer as follows:—"Mr. King is an officer of talent and ability: and if his report should appear to the Chief Commissioner too theoretical, I would plead that the free expression of opinion is always valuable, and that further experience will modify extreme views."

The Officiating Chief Commissioner quite agrees with Mr. Tucker. Mr. King is an officer of remarkable ability, and he has devoted himself most earnestly to his difficult work, the settlement of Pertabghur. The Officiating Commissioner has read his report with much pleasure, though unable to concur in all his opinions.

Mr. Glynn. Mr. Tucker's remarks are as follows on this officer:—"I was sorry to lose Mr. Capper, but Mr. Glynn, by his energy and zeal, has supplied the loss. He has founded a market at Dalmow, which, I hope, will speedily become a commercial town of considerable importance, and he is earnest and eager in promoting the prosperity of the district of which he has charge. By his exertions alone the Abkaree Revenue had been made to yield many thousand rupees more than it otherwise would have done. I trust greatly to him for the protection of the Salt Revenue."

Mr.

Mr. Tucker has not said more of Mr. Glynn than the Officiating Chief Commissioner can most fully concur in. Mr. Glynn has now commenced the settlement of Roy Bareilly, a work which will severely test his method and judgment, but not, the Officiating Chief Commissioner firmly trusts, be found too much for them--there is no fear that there will be any want of energy and zeal.

Captain Shaw. Mr. Simson reports as follows of this officer:—"Captain Shaw, Assistant Commissioner, has officiated as Deputy Commissioner for six months, three months in the Fyzabad, and three in the Gonda district. His immediate superiors in the district have always reported most favourably regarding him, and Captain Reid again bestows on him the highest encomiums. I agree in nearly all that has been said in his favour from first to last, and very much regret having to detract from it in even the slightest degree; but in the course of examining his work defects have come under my notice, and the exigencies of my position, more especially after what has occurred, require me to notice them. Captain Shaw's zeal is undoubted; he takes great pains with his cases, and he works generally from morning to night, but his cases are frequently not well got up, and in consequence they have been subjected to severe criticism in instances in which the decisions have afterwards proved quite correct. His defects are attributable, I think, to a want of system, and of the faculty of recording clearly the points of a case, but he has constantly been overwhelmed with work which is not favourable to the acquirements of habits of either method or precision; and I doubt not that, had the district of which he was put in charge been as light a one as ordinary, he would have come out of the ordeal with credit to himself and benefit to Government and the people."

The Officiating Chief Commissioner believes that Mr. Simson has correctly stated the case as regards this officer, who has been transferred to Roy Bareilly, where easier work will enable him to pay more attention to the getting up of his cases and the preparation of his decisions, both as regards their contents and writing, for the latter, as the Judicial Commissioner truly remarks, defies appeal. Captain Shaw is so anxious to do his best, that the Officiating Chief Commissioner entertains great hope of his improvement, for it is not his judgment that is in fault, so much as the manner in which his decisions are recorded.

Mr. T. H. Kavanagh. Messrs. Simson and Tucker both speak very highly of this officer as thoroughly up to his work, indefatigable at it, and always ready to make himself useful; and the Officiating Chief Commissioner knows Mr. Kavanagh well deserves this praise.

Lieutenant Hawkins. Colonel Abbott speaks as follows of this officer:—"Lieutenant Hawkins has conducted the duties of the district, while Mr. Clifford was employed in conducting revenue settlement. He is a very careful painstaking officer, and records his cases most clearly and efficiently. A very efficient judicial officer, and daily improving in his revenue knowledge. He has taken much pains with his annual report, in which I have criticised some few points which had better have been omitted; still it contains sufficient to show that he has given the subject of the administration his attention."

This is higher praise than the Officiating Chief Commissioner is disposed to concur in. Lieutenant Hawkins takes pains with his judicial cases, but he does not appear, to the Officiating Chief Commissioner, to take any deep interest in his work generally, and to do so much or so well as his ability would enable him to do, while a somewhat strong belief in his own competency tends to prevent improvement in the points in which he is deficient.

Mr. Ross. Colonel Clarke says, "that Mr. Ross promises to be a most efficient and popular officer; he is somewhat inexperienced, and perhaps a little hasty." Mr. Ross does want experience, but he has remarkably sound sense, and a very earnest desire to do his duty, and the Officiating Chief Commissioner is convinced that in a few years there will scarcely be a more efficient officer in the province. He is perhaps as yet slightly too much addicted to *shikar*, but the Officiating Chief Commissioner cannot think the worse of him for that.

Dr. Young entered the commission during the year as Assistant Commissioner 1st Class, a circumstance which was not in his favour as regards the good-will of his brother assistants; but his many good qualities have already overcome this temporary disfavour. Circumstances have led to his rather rapid transfer from one division to another, so that no Commissioner says much about him; but the Officiating Chief Commissioner knows they think remarkably well of him; and fully concurring in that opinion himself, he has since the close of the year put him in charge of a district where his patience, temper, and good judgment have already gained confidence for him.

2nd Class Assistant Commissioners.

Mr. Wood. The Commissioner, Mr. Tucker, says that Mr. Wood is a valuable officer of Government in his judicial capacity, and the Officiating Chief Commissioner has always heard a very good account of him from others, but he has himself seen very little of his work. He does a considerable portion of the revenue work, but did not take a fair share of the civil and criminal, and he does not, the Officiating Chief Commissioner thinks, relieve the Deputy Commissioner of so much work as he might do.

Mr. Crommelin. This officer being absent at the close of the year, the Commissioner, Mr. Tucker, has omitted to mention him. The Officiating Chief Commissioner knows him to be a sound steady officer, of great application to his duties.

Mr. Berkeley is described by the Commissioner, Colonel Clarke, as an excellent general business officer, whose health latterly failed much. He had charge of the Seetapore district during the six months of Captain Thompson's absence in England, and did his work very well, under the immediate supervision of the Commissioner.

Mr. Lang. Mr. Simson concurs in Major Steel's opinion of this officer, which is as follows:—"Mr. Lang is clear-headed, methodical, and gets through his work well and quickly."

Colonel Abbott is unable, from the short period Mr. Lang was under him, to give an opinion of his work, but says he was zealous and attentive. The Judicial Commissioner entertains a high opinion of Mr. Lang as a judicial officer, and the Officiating Chief Commissioner fully concurs with him.

Mr. Maconochie has lately been transferred to the Settlement Department. Colonel Abbott describes him as a painstaking improving officer, and the Officiating Chief Commissioner believes he will do credit to his selection for the important duties now entrusted to him.

Lieutenant Fisher is said to be very painstaking, and the Commissioner, Colonel Clarke, considers him better in the judicial than in other departments.

Mr. Harrington. This officer returned during the year, and has been so short a time in any district, that he is not mentioned by either Commissioners or Deputy Commissioners. The Officiating Chief Commissioner knows him to be an officer of very considerable ability, who only requires experience and opportunity to distinguish himself.

3rd Class Assistant Commissioners.

Lieutenant Eckford. The Commissioner, Mr. Simson, states as follows of this officer:—"Lieutenant Eckford still wants experience, and I have had occasion to complain more than once of the getting up of his cases; but I have lately noticed an improvement."

The Officiating Chief Commissioner can say nothing in favour of this officer, who wants either ability or application enough to enable him to pass the higher standard of examination.

Lieutenant Hewitt. The Commissioner, Mr. Simson, remarks as follows:—"Lieutenant Hewitt, Assistant Commissioner, Gonda, was the only assistant there for the greater part of the year, and much work in both departments has devolved upon him. He investigates his cases thoroughly; his record is well got up, and his judgment is good; and I should be very glad to see him obtain the promotion which he has fairly earned."

The Officiating Chief Commissioner has seen but little of his work, and it consisted principally of investigations into rent-free tenures; they were not very well done, owing, the Officiating Chief Commissioner thinks, to Lieutenant Hewitt's not having been properly instructed on what he had to do, otherwise the Officiating Chief Commissioner has no reason to disagree with Mr. Simson's very favourable opinion of this officer.

Lieutenant Forbes. The Commissioner, Colonel Abbott, speaks as follows of this officer:—"Lieutenant Forbes, Assistant Commissioner, was moved to Lucknow, is a steady good officer, passed his examination for the higher standard with credit, takes much pains with his cases, and gives sound judgments. He is a very promising young officer."

The Officiating Chief Commissioner entertains a very good opinion of this officer, who has shown both ability and power of application, and passed his higher examination in a remarkably satisfactory manner.

Mr. M. Mason. Major Steel states, "that this officer has done a good amount of work, and will, he feels sure, turn out very well; and the Commissioner, Mr. Simson, concurs with him."

The Officiating Chief Commissioner believes him to be a very fair officer, and will take the earliest opportunity of bringing him to a station where more will be seen of his work than in the remote district of Baraitch.

Mr. Knighton. The Commissioner, Colonel Abbott, speaks as follows of this officer:—"Mr. Knighton has recently passed for the higher standard, and is an officer of promise. He has conducted the Treasury, the Civil Court, for some time; and the Revenue Civil Court as well as Criminal work. I am glad to be able to notice him favourably."

And the Officiating Chief Commissioner concurs.

Mr. Dyson. The Commissioner, Mr. Tucker, has great confidence in this officer, who has ability; but the Officiating Chief Commissioner thinks he wants somewhat of the discretion to be acquired by experience.

Lieutenant Phaire did not join during the year.

Extra

Extra Assistant Commissioners, 1st Class.

Mirza Abbas Bey, the Commissioner, Colonel Clarke, remarks, is a very useful officer; and his Deputy Commissioner thanks him for the very great help he has given him in every way. Mirza Abbas Bey is, in the Officiating Chief Commissioner's opinion, an excellent officer, of good judgment and great application.

Mr. Williams. Captain Thompson describes him as an exceedingly painstaking hard-working officer, and admirably adapted for the posts he has held, as Judge of the Small Cause Court, and in charge of the Treasury.

Extra Assistant Commissioners, 2d Class.

Syed Abdool Kakeem. He is said to be sound and trustworthy in his judgments, and his duties altogether too have been creditably performed. This officer well deserves the praise given him.

Mr. Collins. The Commissioner, Mr. Tucker, says he has brought his services to notice in his Judicial Report, but the Judicial Commissioner does not mention them; and the Officiating Chief Commissioner knows that Mr. Collins does very little work indeed. A special report is about to be made regarding him.

Moonshee Ramdyal makes an excellent Extra Assistant Commissioner.

Rai Ajoodhiapershad is a very experienced and able officer, with a capacity for getting through much work in a satisfactory way. The Officiating Chief Commissioner has a very good opinion of him.

Mr. Walker is said by the Commissioner, Mr. Tucker, to be a valuable servant of Government as an executive officer, but no opinion is expressed of him in a judicial capacity. He does a very considerable amount of work, and a large proportion of the criminal cases are tried by him.

Mr. Bickers. The Commissioner, Colonel Abbott, speaks of him with great praise as Treasury officer of Lucknow, and he most fully deserves it. The Officiating Chief Commissioner would be very glad to have some more officers like him in charge of treasuries. Mr. Bickers, however, does judicial work, criminal and civil also, and does it very well.

Moonshee Nundkishore. A steady, hard-working officer, says Colonel Abbott, without much force of character. Colonel Clarke, under whom he was for some time, entertained a very high opinion of him, especially as regards integrity. He has not succeeded in his management of the Lucknow Abkaree department, which the Officiating Chief Commissioner fears was much neglected.

Moonshee Hurshai. A good steady officer, careful in his procedure and diligent in his duties; and to him is attributed the success in distributing the weights in the Oonao district, which was so remarkable. It is to be regretted that there is so little prospect of promotion held out to Native Extra Assistants. He holds the same rank as 3d Class Extra Assistant that he held before the mutiny. It would be well were there some means to reward good services by good service allowances, as was proposed lately in the Punjab, in the English Office department.

Mahomed Buksh Khan, made a judicial officer late in life, for executive services. He has failed.

Mr. Garstin ably assisted his Deputy Commissioner, says Mr. Tucker.

Moonshee Huzaree Lal is said by Mr. Tucker to be well qualified for revenue duties. He is a very fair officer.

Mr. Haldane is very well spoken of by all his superiors, who consider him a steady hard-working officer, who exerts himself to do his best, and is qualified to exercise higher powers than those entrusted to him.

Moonshee Dabeepershad would be better as a police than as a judicial officer.

Mr. Fraser, Civil Judge of Lucknow. No officer does better service than Mr. Fraser. Details are given in the Judicial Commissioner's Report.

Mr. Lincoln; a fair officer.

Mr. Bradford, Demarcation officer, has ably and zealously done his duty, and is now transferred to the Commission as 2d Class Deputy Commissioner, and appointed to officiate at Fyzabad.

Mr. Kavanagh does his duty, as assistant to Mr. Bradford, quietly and thoroughly, and is highly esteemed by all who have to deal with him. He is now in charge of the reduced Demarcation department.

Of 3d Class Extra Assistant Commissioners in the Demarcation department, one, Jwalapershad has been dismissed for corruption; another, Ulee Hossein, is suspended and under trial on the same charge. No accusations have been made against the third, Moonshee Guneshee Lal, which is creditable to him.

The tuhseeldars specially mentioned by Commissioners are,—

In Khyrabad Division.

Kulb Ali, of Baree, lately appointed Officiating Extra Assistant Commissioner.
Hurpershad, of Seetapore.
Neas Ahmed, of Shahabad.
Dhokulpershad, of Sundeela.

In Lucknow Division.

Enaitoollah, of Ramnugger.

In Baiswarra Division.

None.

In Fyzabad Division.

Nujjuf Ali, of Dostpore.
Kishen Lal, of Nanpara.

On the whole, the Officiating Chief Commissioner is thoroughly pleased with the officers of the commission, who, as a body, earnestly endeavour to do their duty. On one point only has he fault to find with all Commissioners and Deputy Commissioners and officers in charge of districts. As a general rule, their statements and returns are neither correct nor submitted at the proper date, and in some instances the errors and delay are anything but creditable to the officers concerned. He hopes for improvement on this point.

Dr. Cannon is fulfilling the expectations entertained on his appointment, by introducing order and economy into gaols.

Mr. Currie was secretary during the year. It is unnecessary to say anything of this officer's well-known capacity, but the Officiating Chief Commissioner cannot omit to mention his very deep obligation to him for able advice and aid, always so cheerfully given.

Mr. Wyllie was assistant secretary. He has a very clear head and sound judgment, with great power of application. Whatever work he did was thoroughly done, and to be confidently relied on. The Officiating Chief Commissioner was very sorry to see him leave Oudh.

Colonel Vanrenen and Captain Anderson conducted their survey duties with the same success as in the preceding year. Their work is most carefully done, and they give no unnecessary trouble to any one.

Captain Chamberlain's duties have lain more in the North West than in Oudh during the past year, but his operations, backed by the precautionary measures of the regular police, have put a stop to the Oonao murders.

The Officiating Chief Commissioner has been led to form a very high opinion of Colonel Crommelin, C.B., chief engineer, and his subordinate officers, Lieutenants Champain, Pemberton, and Swetenham; also of Mr. Marshall, executive engineer, whose road from Fyzabad to Allahabad is a model, or, rather, will be so when finished.

The Officiating Chief Commissioner thinks there is a tendency in the department to potter over their work, but this is probably owing to the system, which seems to require too much time to be spent in office.

The hospitals and dispensaries have been very well managed during the year, and Doctors Douglas, Wishaw, and Bensley deserve especial mention. A very great number of operations have been performed by Dr. Wishaw at Fyzabad, Dr. Bensley at Baraitch, and both have successfully treated a very large number of natives for goitre.

Colonel Barrow has been in charge of the police during the year, and the Officiating Chief Commissioner cannot speak too highly of his intimate knowledge and unwearying care of the force, of his sound sense and strict impartiality. He has worked most harmoniously, too, with the judicial officers, retaining the independence in subordination to them so difficult to hit, but without which the police must become a mere tool, little more to be depended on than the old body. All allow that the force and the system have greatly improved during the past year, and it is to Colonel Barrow that this is due, and his promotion in another line, however well deserved by him and gratifying to all who know him, is a very serious loss to the police, let who will succeed him. He has laid the Officiating Chief Commissioner under deep obligations to him for the way he has worked, and the frank and zealous aid he has always afforded.

The

The Officiating Chief Commissioner fully concurs in the praise given to Major Aitken, Deputy Inspector General, by Colonel Barrow. Major Aitken has exhibited great sense and determination in carrying out the system, the success of which he has deeply at heart. The Officiating Chief Commissioner has learnt much from his excellent reports on the districts he visited.

Captain Barrow is an exceedingly steady sound-judging officer, working without fuss, and never doing wrong. The Officiating Chief Commissioner admired the order and good spirit he had infused into his police.

Captain Hill scarcely needs an addition to his numerous testimonials. He is a most energetic officer, always trying to improve his men, whether it be in police procedure, drill, or football.

Captain Ryall is an excellent officer, who has performed the onerous police duties of Fyzabad to the great satisfaction of the Magistrates.

Captain Sharpe is, as Colonel Barrow remarks, a very zealous intelligent officer, with some mistaken ideas, which time will, it is hoped, correct. To his praise be it said, that he is the terror of the omlah wherever he goes.

Lieutenant Danvers; apathetic.

Lieutenants Woodcock and Tweedie; excellent officers.

Captain Ouseley, ditto; selected first to act as City Magistrate, and then transferred to the settlement department.

Captain Clarke has been steadily improving during the year, and latterly very successful.

Lieutenant Maynard. The Officiating Chief Commissioner regrets to say this officer has been somewhat negligent in his duties lately. He can work well if he likes, and must do so, if he wishes to be better spoken of next year.

Lieutenant Stainforth; an intelligent and zealous officer; but he, like Lieutenant Maynard, was, perhaps, too young when put in charge of a district.

Among the assistants, the only officers who have had opportunities yet of showing their capacity are Lieutenant de Montmorency, Mr. Hamilton, Lieutenant Woodcock, and Mr. Blenman, who are very promising officers. Lieutenant de Montmorency is now officiating as assistant secretary to the Officiating Chief Commissioner. Mr. Hamilton, who knows his duty well, and Lieutenant Woodcock are in charge of districts. The Officiating Chief Commissioner cannot refrain from adding to this a notice of Mr. Gibson's very promising commencement in charge of Sultanpore, although it has occurred since the close of the year.

(signed) *J. Reid,*
Officiating Secretary to the Chief Commissioner of Oudh.

APPENDICES to the REPORT on the ADMINISTRATION of the Province of OUDH, for the Year 1861-62.

APPENDIX A (1.)

COMPARATIVE STATEMENT of CRIME in *Oudh*, for the Years 1860 and 1861.

APPENDIX E (1).

ABSTRACT of Five Mysterious Cases of Murder by Strangulation detailed under peculiar Circumstances.

1. THE first of these murders was reported on the 3d January, while the Chief Commissioner and Commissioner were encamped at Oonao. The dead body was found one mile from Oonao, in the village of Rajpore. Inquiries made by the police, but with no results; the body was never recognised. Strangulation was declared to have been the cause of death. Round the neck a rope in eight coils was found; none of the assembled villages of Oonao, Busheerutgunge or Nawabgunge Ilaquas could recognise the deceased. The chowkeedar of village Rajpore was sentenced to find two securities of 50 rupees each, in default to suffer one years' imprisonment; he was imprisoned.

2. The second of these cases was reported on 7th January. The corpse was first seen by a chowkeedar close to the Grand Trunk Road, within the boundaries of the village of Mullawan. The lumbadars of the village of Jugdespore, whose fields adjoin that village, separated only by the Grand Trunk Road from Lucknow to Cawnpore, removed the corpse to the spot where it was found; a rope in several coils was found round the deceased's neck. He was thought to be a pensioner, as he had 5th Light Cavalry buttons on his coat. The corpse was sent to Lucknow for identification by the pension establishment, but with no result. The police apprehended two persons who were seen standing near the corpse, their houses were searched, but nothing suspicious was found in them. One chowkeedar was sentenced to a year's imprisonment in this case, he not having been able to find two securities for 60 rupees each.

3. The third case occurred in May last. The body of a man with a rope round his neck was found on the borders of the village of Occhur and Sarai Kathan. This was reported at police station, Hurha, on the 6th May. Police investigated, but found no clue, nor did a reward of 500 rupees which was offered lead to any results.

4. The fourth murder was reported on 27th May. The dead body was found lying in a tope about a quarter of a mile east of Oonao. It was never identified, nor was any clue found which could lead to the detection of the murderers. A cord in three coils was found round the neck. The civil surgeon stated that death was caused by strangulation, and that deceased died while drunk. The retail dealers of spirits in Oonao were deprived of their licenses for not telling the names of those who had bought liquor from them on the night of the murder.

5. The fifth of these murders was reported on 31st May by a police sowar, at police station, Hurha. The corpse was found near village Hilgee, with a cord round the neck; no identification or detection ensued.

Case of Strangulation in imitation of above, being Conspiracy to gain Reward.

Another case of strangulation, in imitation of the above mysterious murders, was a very peculiar one from the circumstances connected with it. Bhowany, a policeman, and Bhikaree and Bhabootee, informers, stated they had seen Urjoon (a Takoor resident of the Lucknow district), kill a man and ride off. Captain Ryall and Lieutenant Dodd immediately mounted and galloped off to Urjoon's village, "Bustee Khera," in Lucknow district, 30 miles off. Urjoon's behaviour on being captured completely bore out the assertions of Bhowany and the informers, as he tried to escape over the rear wall of the village into the jungle, and then being unable to get away passed through a trap-door and hid himself on the roof where he was captured, after making an attempt to throw himself off the roof. This conduct was altogether that of a guilty man, and when in addition a running noose (consisting of a thin waxed rope with a loop at one end and an iron ring at another) was discovered hidden in an earthen pot, it appeared certain that at last one of the miscreants who had committed so many murders in the Oonao district had been taken. However, as the investigation proceeded some suspicious differences appeared in the details of the murder as given by Bhikaree and Bhabootee, and on these men and Bhowany being severely cross-examined by Captain Ryall, the whole case came out. Bhabootee owed a grudge to Urjoon, Bhowany was tempted by the hope of promotion and the large reward offered for the discovery of these prevalent murders, and Bhikaree having the same hope of reward, they joined a traveller, murdered him after night-fall with a piece of rope, and then at once brought the information that they had seen Urjoon commit the murder and ride away. The murdered man was a resident of Oonao, as were all three of his murderers, who expiated their crimes on the scaffold.

Case of Murder by Poison in Oonao District in 1861.

1. Baladeen and Mohuree took poison in August 1861, from a person who joined them on the Grand Trunk Road, near Gooshain Gunge. He accompanied them across the Ganges into Oudh, and succeeded in administering some drug or poison to them at Lekara, near Bangermow. They both became insensible and were robbed, eventually Mohuree died from the effects of the poison.

N. B.—This is the only instance throughout the year in Oonao district in which death has ensued in any case of robbery by poison, and it is therefore believed that murder is not the object of these poisoners. The description of the man who committed the above-mentioned crime tallies with that of a man who drugged Matadeen, his mother and sister, on 3d January 1862, at the village of Berokee.

In addition to the murders detailed above, seven ordinary murders occurred during the year, one for sake of robbery, and six ordinary, in five of which convictions were obtained.

Cases of Robbery by Poison that occurred in Oonao District in 1861.

1*st. Case of Deen Mahomed, cartman to Ghoolam Abbass, of Roy Bareilly.*—A party of five, consisting of two men, one woman and two children, engaged the cart of Ghoolam Abbass, of Roy Bareilly, to go to Jhansie. While halting at Asurkeera, Deen Mahomed, the cartman, was made insensible by drugs or poison being mixed in his dâl. The travellers took away the cart and bullocks and sold them to the lumberdar of Hurgaon, in the Meeangunge Ilaqua, where they were recovered by Captain Ouseley, in November 1861, eight months after the crime was committed. It occurred on the 23rd March 1861. Deen Mahomed recovered.

2*nd. Case of Moolla, servant of Badoolla.*—On the 29th March a party (answering almost to the same description as those who poisoned Deen Mahomed and took away his hackery) hired a cart from Badoolla to go from Suffeepore to Meeran-ke-Serai. Badoolla sent his servant Moolla with the cart, and the next day, the 27th March, Moolla was rendered insensible by some poison (probably dhutura) in his food, and the cart and bullocks were taken away and have never since been heard of. The first report of the crime was made at the police station of Bangermow on 29th March, two days after the robbery occurred, which of course gave but small chance to the police. Descriptive rolls of the poisoners were sent to all the surrounding districts, and the Cawnpore district superintendent apprehended seven persons, but they were not identified and were released.

3rd. Case of Chundee, occurred on 8th June 1861.—Chundee was going to buy cattle, and was joined by a traveller, who drugged him with bhâng and robbed him of 25 rupees. Complainant pointed out the man, who was apprehended and chullaned.

The case was tried by Mr. Elliott, who, considering there was not sufficient proof, released the prisoner.

N. B.—It is believed that the same party poisoned Deen Mahomed in the first case, and Moolla in the second; and they are also supposed to have committed a similar crime on the person of Fakeera Gharywan in February this year (1862). It would appear that their object is not to produce death, as in all of those instances the poisoned men recovered.

LUCKNOW, *the* 8th *April* 1862.

MEMORANDUM on Arrangements for the Prevention and Detection of violent Crime against Person and Property in the Oonao District, more especially Murder by Strangulation and Robbery by Poisoning.

I. In addition to constant patrolling from the police stations of Oonao, Nawabgunge, Poorwa, Suffeepore, Meeangunge, Bangermow, Hurha, and Mowrawan, an organized system of patrol has recently been organized from the 19 following out-posts, and is now carried out as follows:—

II. The strength of each out-post is two mounted constables, one head constable, and other three or four constables, foot police. By orders lately issued by the Deputy Inspector General, one sowar commences patrolling at a little before daylight and returns at 11 a.m., the other starts at 4 p.m. and returns at 10 p.m. The whole of the foot police at out-posts, formerly men raised for the extra police, have been relieved by the most experienced constables of the Oonao police, and they have been directed to act much more as detectives than formerly; one of them at least is directed to be constantly moving about in disguise mixing with travellers, especially those coming from the Ganges.

Each head constable in charge of an out-post is directed, on the occurrence of a heinous crime, to set out at once to the spot after despatching one sowar to the nearest police station, and the other sowar to the district superintendent; no written report is required from them, so that the information reaches quickly, but the name of village and direction from out-post is invariably to be given, so that the superior police officers may reach with the least possible delay.

The usual precautions regarding the non-disturbance of the corpse and the preservation of marks of foot-steps are directed to be taken.

The chowkeedars of the district have been warned to be on the look-out, especially for bodies of travellers coming from the Ganges, and that they will be liberally rewarded in the event of a heinous crime being brought to light through their instrumentality.

III. The following are the out-posts and general patrolling directions of the sowars:

1. Pucchudda, eight miles from Nujjufghur Ghat. The sowars patrol to the ghat and back again.

2. Bickrampore, 10 or 12 miles from Ganges. Patrol towards ghat and meet half-way the Nujjufghur patrol.

3. Nujjufghur, a ghat on Ganges. The sowars patrol towards Bickrampore and meet sowars from that out-post.

4. Cawnpore Bridge. The sowars patrol towards Oonao and meet Oonao patrols.

5. Purrior, a ghat on Ganges, nine miles north-west of Cawnpore Bridge. The sowars patrol towards Nawabgunge and Oonao alternately.

6. Jajahmow, a ghat 12 miles west of Purrior, patrol towards Meeangunge.

7. Radhun Ghat, — miles west of Jajahmow, patrol roads leading north and east from ghat.

8. Tukya, between Bangermow and Meeangunge, patrol towards Baree Thannah and Moostuffabad.

9. Moostuffabad, patrol towards Bangermow and Tukya.

10. Mudarnuggur, patrol between Bangermow and Nanahmow Ghat.

11. Nanahmow Ghat, patrol towards Bangermow.

12. An outpost on road, about four coss from Mehndee Ghat, patrol towards ghat.

13. Mhowaza, half way between Suffeepore and Meangunge, patrol towards these two places.

14. Baree Thannah, patrol towards Lucknow and Bangermow.

15. Muddaree Khera, or road between Poorwa and Oonao, patrol towards those two places.

16. Phoolwa Ghana Ghat, patrol four coss from ghat and back.

17. Bhysaie on Poorwa and Hurha road, patrol towards those two places.

18. Surraga Ghat, patrol four coss from ghat.

19. Dabee Chowkee, two miles from Oonao. No sowars.

IV. To supply this large force of sowars nearly all the reserve at head quarters has been employed, and a force of 15 horses and 20 foot from Lucknow district has been sent into the Oonao district.

V. An out-post has also been established near Mehndee Ghat in Hurdui district, and one constable in disguise is constantly near the ghat.

VI. Two very intelligent police officers have lately been temporarily sent from other districts principally for the purpose of carrying out an organized system of patrol and detectives. These officers are Inspector Sew Singh and Deputy Inspector Hyatt Khan, and the out-post will be divided between them and Inspectors Sewdeen Doobey and Uttur Singh; a very successful detective from the Lucknow district has also lately been sent into Oonao; he is head constable, second grade, Moona, and is a Passee.

VII. Three of the poisoned men, Mattadeen, Balladeen and Fakeera have been entertained in the extra police, and are stationed at different ghats for the purpose of recognising their poisoners.

VIII. Finally, the means taken for the prevention of violent organized crimes in Oonao would appear to have had some effect.

There has been no murder by strangulation for more than 10 months, and during the year there were only four cases of robbery by poison, in one of which the poisoned man died. Since the beginning of this year there have been two cases of robbery by poison, but no deaths.

(signed) *R. W. M. Aithen,*
Deputy Inspr. Genl. of Oudh Police.

APPENDIX O (1).

CIRCULAR.

(No. 16—378 of 1862.—General).

From the Secretary to Chief Commissioner, Oudh, to _____

Sir, Dated Lucknow, the 17th February 1862.

I HAVE the honour to forward, for your information and guidance, copy of a memorandum drawn up by the Officiating Chief Commissioner on the subject of village chowkeedars, their appointment, removal, remuneration and duties.

2. The Officiating Chief Commissioner desires that the instructions contained in this memorandum may be rigidly enforced.

3. Commissioners are requested to draw the attention of Settlement Officers to the modification of paragraph 12 of Settlement Circular, No. 14, enjoined in paragraph 13 of this memorandum.

I have, &c.
(signed) *C. Currie,*
Secy. to Chief Commr. of Oudh.

MEMORANDUM.

1. IN 1859 Captain Thompson, Deputy Commissioner of Seetapore, submitted an admirable memorandum to the Chief Commissioner on the subject of the chowkeedaree arrangements in his district, showing that the system introduced into the province at annexation of making the chowkeedars Government servants, and paying them cash wages from a fund raised by a tax levied on the landholders of no less than 6 per cent. on the amount of revenue they paid to Government, was a total failure. The Chief Commissioner, in his Circular No. 132, dated the 3d December 1859, remarking on Captain Thompson's memorandum, expressed himself strongly in favour of the old system as described by Captain Thompson, and authorised a return to it in the Khyrabad division; but as it might not have prevailed generally throughout the province, he called for reports from the officers on the subject. Their replies show that a very complete system of village watch had existed everywhere, and the majority of able and experienced officers in the province were strongly in favour of a return to it, either without change or with one or two slight modifications.

To Commissioner, Lucknow, No. 348, dated 21st February 1860.
To Commissioner, Fyzabad, No. 383, dated 24th February 1860.
To Commissioner, Baraitch, No. 906, dated 2d May 1860.

On receipt of each divisional report each Commissioner was authorised to revert to the old system in letters as per margin. It does not appear from the correspondence before the Officiating Chief Commissioner what was actually done in consequence of this permission; cash realizations from the landlords on account of chowkeedars' wages of course ceased, except as regards 8 annas per cent., which was retained to form a fund for rewarding good service.

2. On the 8th September 1860, however, the Chief Commissioner issued Circular No. 57, stating that he had been given to understand that though the tax had ceased to be collected, some talookdars had failed to give rent-free land to such chowkeedars as did not possess it or other adequate remuneration, as required by Circular No. 132 above quoted, and that much discontent consequently prevailed. Deputy Commissioners were accordingly directed to warn talookdars that, unless they assigned five pucka beegahs rent-free to the chowkeedars who required it, cash payments would be reverted to, and the cess collected as before. This order was unfortunately much misunderstood, and often put in force with more zeal than discretion. Officers overlooked the two very important points in it: first, that it did not apply to such chowkeedars as already had either sufficient land or other adequate remuneration; and secondly, that the alternative offered by Mr. Wingfield to those talookdars who did not comply with the requisition, was a return to cash payments, and not a threat to enforce the order by measuring off the five beegahs through Government officers. In some places the order was enforced without reference to the remuneration which the hereditary chowkeedars received in grain and presents, or in others to the fact that they still retained their rent-free lands in spite of the appointment of Government chowkeedars. In one district, at least, the Deputy Commissioner sent out ameens and regularly measured off five beegahs in each village to the chowkeedar. On the other hand, some talookdars, the Officiating Chief Commissioner has reason to believe, understood the order to mean that a chowkeedar was not to receive more than five beegahs, and in

in restoring their rent-free land, restored that quantity only. The consequence has been confusion and discontent, and a varying and uncertain system. The chowkeedar and the villagers or landowners are now antagonistic, a feeling which in relation to this very matter Mr. Wingfield so much deprecated giving rise to between classes. The chowkeedars are rendered independent of those for whose benefit they exist, and whose servants they should be, they are discontented with what they have got, and complain that the villagers do not give grain, &c., as they used to do, and that the land assigned them is of the very worst quality, perhaps quite barren. The villagers naturally dislike giving anything to a man over whose services they have no control; they want a man to watch their fields and houses, &c., and not one who considers it his sole duty to report thefts or conceal them, as may be. The landholders are, of course, dissatisfied at having land forcibly taken from them and assigned to others, and at being held responsible for reporting crime, when the chowkeedars, whom they are forced to pay, are no longer under their authority.

3. The Officiating Chief Commissioner has had many complaints on this subject, and he knows many officers, some of high position, are greatly dissatisfied with the present state of affairs, as regards chowkeedars and their pay. He therefore considers it necessary to explain clearly the old system, a return to which was directed by Mr. Wingfield, and which shall be strictly adhered to in future, so far as it is consonant to our laws to rescind the five beegah order, so largely responsible for the confusion, and to define the duties and responsibilities of landowners in regard to the reporting of crime and to the village police.

4. Under the old system the chowkeedar was originally appointed by the landlord or the villagers, and was paid by them, responsible to them, punished by them, and removed by them, all without interference on the part of Government officers. They were paid by a portion of rent-free land, by a certain proportion of the village crops, by presents from the villagers, sometimes in all three ways, sometimes in the two latter only. Their duty, whether in any village there existed both goracts and chowkeedars, or solely the latter, was to watch the crops and the village, to run errands, to make good the value of property stolen in the village, or to catch the thief, and as the emoluments were generally liberal, and the office had become hereditary, the villagers had often the benefit of the services of the whole of the chowkeedar's family. Now, allowing that it is the duty of Government to take measures for the protection of the property of its subjects, it is clear that it could not superintend the machinery required for watching crops and villages, not even at an enormous expense, while the people themselves can do so very cheaply, and with tolerable effect, and such duties are generally recognised as belonging to municipal government, and are left to communities, who, if they think watch and ward necessary, and tax themselves for it, will see that the work is done. In large towns some help is necessary to enforce uniformity; in small towns and villages the people can act best for themselves.

5. Again, the running of errands is a matter which Government wisely leaves to the people themselves to settle about, and the Officiating Chief Commissioner observes that no officer proposes to regulate that department of village life.

6. Lastly, under our laws we cannot make the chowkeedar produce the thief or refund the value of the stolen property, nor did the former Government interfere in these affairs; they were left entirely to the people.

7. Of the old duties of the chowkeedars, then, not one related to Government, but we have imposed a new one on him, in common with all village officials and landholders. We require these persons to report all crimes occurring in their villages, to aid the police in the investigation of crime, the apprehension of offenders, and one or two matters of the same kind. We have nothing else to require of the chowkeedar, all his other duties, watching, carrying messages, procuring supplies, concern the villagers and landowners; and if in addition to these they contract with him to catch the thief, or make good the stolen property; when a theft occurs in the village the Officiating Chief Commissioner sees no objection, except this, that the chowkeedar may probably commit a second theft to pay for the first; but we cannot officially interfere to enforce this contract. A theft, however, must be reported even though the chowkeedar has made good the amount.

8. In future, then, it must be distinctly understood that the chowkeedar is the village servant, and that in consequence of his being the village servant, he is bound to report crime and aid the police, &c.; but Government has nothing whatever to say to him in regard to his appointment, dismissal, mode or amount of payment, or performance of village duties. These matters lie entirely between the chowkeedar himself and the talookdar or zemindar or villagers who appoint him. Between them they settle the duties and terms, and no Government officer has a right to interfere in any other way than he can by law do between any ordinary employer and servant, though upon proved misconduct of a chowkeedar in regard to his duties towards Government, the employer can be ordered to change him.

9. By paragraph 52 of the Government letter of the 4th February 1856, the spirit of the regulations, as regards the responsibilities of landlords in criminal and police matters, was ordered to be applied to Oudh. These responsibilities are described at pages 277-8 and 9 of Tucker's Note Book, and paragraph 185, page 83, of Directions to Settlement Officers, and the punishments to which they are liable are given in Sections 176 and 177

of the Penal Code. In a talooka village, then, for instance, the talookdar himself, the sub-proprietor or the tikadar, the managing or collecting agents of the proprietor, the putwarree, the chowkeedar are jointly and severally responsible, according to the circumstances of a case, for reporting a crime. The landowners and agents may report through whom they please; they will generally report through the chowkeedar, and the chowkeedars therefore must be assumed as the persons through whom reports will ordinarily be made, and when a chowkeedar reports, it shall be considered as exempting all others from the necessity of reporting; but if a talookdar chooses to appoint other agency than the chowkeedar for reporting crime in a village, (and if he does so he must file a list of the persons so appointed), the report of such a person will not exempt the chowkeedar from the necessity of also reporting the same occurrence.

10. The officer in charge of a district may, upon the proved misconduct of a chowkeedar in regard to report of crime or aid to the police, or other public (in contradistinction to village) duty required of him, order his removal, and direct the proper party to appoint a person in his place. This should not be done the first, or second, or third offence, unless very serious; warning and fines will be enough at first.

11. When a crime has not been reported in any village, the chowkeedar alone should not be punished; the other persons resident in the village, and bound as he is to report a crime, should be invariably punished with him, and more severely than he is. Where concealment is systematic, or in any particular case where there is reason to believe that a landlord or his agents, although not residing in a village where a crime has occurred, have been cognizant of its occurrence, and yet have not reported it, they also will be liable to punishment according to the extent of guilt established against them, whether simple neglect of a duty or connivance at a crime. The duties of a chowkeedar in regard to the police and to criminals, and the punishment to which he is liable for neglect of them, will be found in the laws quoted in paragraph 9 of this memorandum.

12. When in any village a chowkeedar is not kept up, the District Superintendent will report the fact to the officer exercising the powers of magistrate in regard to such matters, who will first warn the party concerned of the alleged neglect, and if this is not sufficient, will enforce appointment by a fine. Should the neglect be habitual or persisted in, the officer aforesaid will proceed to nominate a chowkeedar, and will require the Deputy Commissioner as collector, or the settlement officer in districts under settlement, to fix the remuneration payable by the owners of the village, either in cash at the rate of 36 rupees per annum, or in land yielding produce to the same annual value. A chowkeedar so appointed shall be considered a Government servant only, unless the villagers choose to pay for his services to them by a per-centage in crops, or in any other way, and when a chowkeedar has been thus appointed, the old system will not be reverted to, however much the landlord or villagers may wish it, until at least two years have elapsed. By Section 21, of Regulation XX., of 1817, landlords are legally bound to nominate chowkeedars, and by Section 188 of the Penal Code are punishable for disobedience to an order duly promulgated.

13. Settlement officers will, in their proceedings, record the names and status of the parties whose duty it is to appoint chowkeedars, the amount of their wages, and the mode of paying them; any land in a chowkeedar's possession will, of course, be so recorded with the terms of the tenure as in any other case, but the settling officer will not set aside for the chowkeedar any land in addition to that which he may be found to hold. Paragraph 12, of Settlement Circular, No. 14, is modified accordingly, and Settlement officers will be informed of the same. This rule does not apply to villages in the predicament described in the preceding paragraph. In these the settlement officer will fix and record the chowkeedar's rights.

14. The present list of chowkeedars will be assumed as correct, but the Inspector General of Police may, whenever he thinks proper, direct the talookdars and other landowners of any district to furnish fresh lists of the chowkeedars of their villages. These lists they are bound to furnish under Section 21, Regulation XII., of 1807, and are punishable for not doing so under the above quoted Section of the Penal Code.

15. The Inspector General of Police shall exercise the power of a magistrate throughout the province, as regards the punishment of landholders and others: first, for not reporting crime; second, for not keeping up chowkeedars; and third, not filing list of them, and district superintendents will be guided by his instructions as to which classes of cases they take to the Deputy Commissioner and which to him. Generally speaking, Nos. 1 and 2 should go to the Deputy Commissioner, and No. 3 to the Inspector General. The Deputy Inspector General is furnished with like powers to be exercised, however, on his tour only, and in the district in which he may happen to be. When the Inspector General thinks that the circumstances of any district require a district superintendent to be vested with these powers, he will report, mentioning distinctly whether the superintendent already is the district has shown discretion enough to justify his being invested with the powers.

16. The Inspector General of Police will prescribe rules regarding periodical reports by chowkeedars to the nearest police station, besides their occasional report of crimes, &c. Periodical reports should not be oftener than once a fortnight for those who are near, and

once

once a month for the very distant. Once a year at least the chowkeedars attached to each police station should be assembled and inspected by District or Assistant Superintendent.

17. Good conduct on the part of a chowkeedar must always be rewarded with a liberal hand, and the Officiating Chief Commissioner will take steps to secure funds being placed at the disposal of District Superintendents for this purpose.

(signed) *C. Currie,*
Secy. to Chief Commissioner of Oudh.

APPENDIX A.(2).

(No. 388.)

From *G. Campbell*, Esq., Judicial Commissioner of Oudh, to Captain *J. Reid*, Officiating Secretary to Chief Commissioner of Oudh.

Sir, Dated Lucknow, the 3d June 1862.

I BEG to submit the Inspector of Prisons' Report on Gaols in Oudh during the past year, with the prescribed Returns, and my remarks in reply.

2. Dr. Cannon's onerous duties in building the central gaol have not admitted of his making the careful examination of each gaol in the province which I could desire; but he has, at my request, rapidly run round most of them, and the result will, I am sure, be beneficial, especially as regards the additions and improvements in progress.

3. The report on the past year will, I trust, be considered as satisfactory as could be expected under the circumstances.

4. There has been a very gratifying decrease in the mortality. The excessive unhealthiness of the Lucknow Gaol has proved to be temporary; the number of deaths in that gaol during the year under report has come down to 8 per cent., and latterly I believe that it has been positively healthy.

5. The cost of the gaols has been *Rs.* 1,20,252. 15. 11. It is quite useless, at present, to compare the cost per head of charges, which are fixed without reference to numbers, viz., the fixed establishment and police guards. To judge of the real fluctuating expenditure, we must take column 10 of Statement No. II., showing the cost per head for diet and fuel, clothing and bedding, medicines, miscellaneous and contingent guards. The cost then for the year of each prisoner for all these charges, and exclusive of the fixed establishments, is *Rs.* 26. 11., which, considering the want of secure gaols, and the excessive dearness of the year (the famine year in the North Western Provinces), is not, I think, excessive.

6. I have before explained that we had not the means of much discipline, and the gaol building has lately taken the prisoners from manufactures to ordinary manual labour. On the whole, I believe that as much has been made of the prisoners as could be expected, and that the deterrent effect has certainly not been less than is usually the case where there are no especially penal appliances. That more cannot be said is not, I think, occasion of blame to the Administrative Officers, for in this department we can do nothing without money, and over that we have no control; we have not yet any means of solitary confinement, and all our gaols have hitherto been of the rudest description.

7. For the future our prospects are considerably improved. Dr. Cannon deserves the greatest credit for the way in which he has pushed on the Central Gaol, one of the two under circles of which is now ready. So far as we have yet had experience, there is every prospect of the site proving quite healthy, and if so, I am sure that it is an excellent one.

The Fyzabad Gaol is also far advanced, and several barracks will be ready before the rains.

The Seetapore Gaol was not undertaken so soon. Two or three barracks are promised before the rains, but it seems doubtful.

8. The conversion of the deserted barracks at Sultanpore into a gaol for 500 prisoners has been carried out in a rough way, but we still altogether want interior fittings and compartments, &c., which may be supplied for about 4,000 rupees more, if the money be granted.

9. The minor district gaols are, however, still in a lamentable state, owing to our failure to obtain any money to add to them. They are, as the Chief Commissioner is aware, mere hawalats, calculated to hold 50 or 60 people, and with no separate hospital or women's wards or other conveniences. I do not see how it is possible that, under the present law, which substitutes imprisonment for flogging, the public service can be carried on with these buildings without great injury and inconvenience. In two or three of the districts I have succeeded in getting some additions made by prisoners' labour, eked out

by small aids from local funds which happened to be available. I do sincerely trust that it will soon be thought proper to grant the very moderate sum required for rendering them decent gaols, fit for holding the district prisoners up to six months, on the plan which I long ago submitted.

10. I should gladly welcome the establishment of a reformatory for juvenile and improvable offenders, and think that, upon the whole, a penal farm established on waste land would succeed best.

11. The gaols are not yet in so forward a state as to admit of my concerting with the Inspector of Prisons any novel experiment on that most difficult of all problems—effective prison labour. I am never free from doubt whether in our ordinary intramural system the seclusion is not counterbalanced by the extreme lightness, pleasantness and sociability of the work. I am never able to get over the feeling that to make carpets and twine, and knick-knacks, as we see it in a gaol, is rather a pleasant occupation than otherwise, free as the happy prisoners are from all the cares and anxieties and struggles of this working world.

12. The great want is some really rigorous occupation for those who deserve rigour, such that we can safely measure and regulate it. The only resource we at present have is in hand-mills placed high, so that the prisoners must stand to them. I am an admirer of tread-mills. We have tried one or two, but the machinery always breaks down. I would strongly recommend that the iron machinery for a few good tread-mills should be imported from England.

13. How far it is desirable to give to a thief education, which he would never have had if he had remained honest, is a different question; but, upon the whole, I think the advantage of instruction preponderates. I have suggested to Dr. Cannon to try to make a commencement in this way.

I have, &c.
(signed) *G. Campbell,*
Judicial Commissioner of Oudh.

APPENDIX B (2).

(No. 58.)

From *H. M. Cannon*, Esq., M.D., Inspector of Prisons in *Oudh*, to *G. Campbell*, Esq., Judicial Commissioner of *Oudh*.

Sir, Dated Lucknow, the 28th May 1862.

I HAVE the honour to submit the accompanying Statements, from I. to XVII., with a "Comparative Gaol Expenditure Form" as prescribed by Government, showing all the details of prison management in Oudh during the year 1861.

2. Not having entered upon the duties of Inspector of Prisons until after the commencement of the current year, it will not be in my power to do much more than furnish the above-named Tabular Statements, together with a general abstract of the divisional annual reports, showing the comparative increase or decrease of expenditure under every head for the last two years.

3. It would be presumptuous in me were I to comment on the management of the different gaols during 1861. I have as yet only had opportunity of making a hasty inspection of 10 of them, more with a view of reporting and suggesting improvements on the subject of increased gaol accommodation which was urgently required.

4. I am, however, prepared to show that, under Mr. Campbell's supervision, the financial results of 1861 are very favourable as compared with the previous year, and in the face of circumstances which naturally might have been expected to raise the cost per head per annum, has, by an improved system of economy under several headings, been reduced from *Rs.* 54. 8. 2. in 1860 to *Rs.* 46. 4. 5. per head per annum in the year under review. The unfavourable circumstances to which I more particularly allude is, in the first instance, the effect the North Western Provinces' famine of 1860 had in draining Oudh of all its superfluous grain, and so raising the price of provisions in the early part of 1861. Again, owing to the want of prison accommodation and the increase in the number of prisoners, three important gaols were sanctioned and commenced upon, which necessitated the prisoners being divided into large gangs for employment on the several works, thus requiring an addition to the strength of police and Burkundauz guards, which invariably form the heaviest items of expenditure in prison management.

5. Being quite aware of the advantages and disadvantages regarding expenditure to which different gaols are subjected from locality or unforeseen circumstances, I shall only note comparison between those belonging to the same divisions.

6. The

6. The following is a general abstract of the number and disposal of prisoners throughout the different gaols in Oudh for the year 1861:—

Remaining on 1st January 1861	2,025
Committed during the year	10,342
Total prison population	12,367
Released during the year	8,384
Escaped	25
Died	195
Executed	24
Remaining on the 31st December 1861	3,497
Aggregate number during the year	948,401·40
Daily average	2,598·36

7. Statement No. I. gives a detail of the annual expenditure of each gaol, which amounts in the aggregete to *Rs.* 1,20,252. 15. 11. on account of 2,598·36 prisoners confined during the year 1861, being, as compared with the previous year, which was *Rs.* 93,725. 2. 5. on 1,719·29 prisoners, exhibiting an increase in expenditure of *Rs.* 26,527. 13. 6., and in prisoners to the number of 879·07.

8. Statement No. II. gives the cost per annum of each prisoner under the different items of expenditure incurred on his account; the gaols are classed in this table according to the cost per head, the Lucknow Central Gaol showing the lowest, and the Roy Bareilly the highest, rate per man.

9. The average expense per head which each prisoner in Oudh has been to Government during the past year (repairs and alterations of gaols included) is *Rs.* 46. 4. 5., whereas in 1860 it was *Rs.* 54. 8. 2., showing a saving on 2,598 prisoners (at a decrease of *Rs.* 8. 3. 9. per head) of *Rs.* 21,392. 14. 6.

10. This decrease in the annual cost of each prisoner, and which I hope to reduce still further by five rupees per head during the current year, should, under the disadvantageous circumstances noticed in para. 4, be considered very satisfactory, and in itself sufficient testimony of the growing zeal and attention of district officers to the minor details of gaol management and economy.

11. You will observe in column 2 of Statement II. how variable is the cost per head for "fixed establishment;" this, however, will no longer occur when the Schedules of the above for the different gaols in Oudh have received the sanction of Government.

12. Column 4, "Permanent Gaol Police Guard," is the great item of expense in the keep of prisoners, especially in small gaols, where the prison accommodation is both inadequate and insecure. As soon as the larger gaols are more advanced, this guard will not only be very much reduced, but fixed at a standard strength for the three classes of prisons; even now I am happy to be able to state that during the year under review, there has been a reduction per head in this respect of *Rs.* 5. 5. 5.

13. Column 5, "Contingent Gaol Burkundauz Guard," is high, and must remain so, so long as prisoners are employed at out-door labour, especially by the Department Public Works on the new prison buildings. I hope, however, to reduce this source of expense to a mere trifle, so soon as the larger gaols are complete, and ready to receive the prisoners at intramural labour.

14. Column 6, "Miscellaneous Expenses," is high, but will decrease every year as district officers become more experienced in the management of their respective gaols.

15. Column 7, "Native Medicines." The successful efforts that have been made by the medical officers to reduce expenditure under this heading is deserving of praise; in one gaol the reduction has been as great as six rupees per head,* showing the necessity that existed for demanding more economy and supervision in such matters.

* Of sick treated in hospital at Fyzabad.

16. Column 8, "Diet and Fuel." The cost on this account is moderate, but I expect to find it much reduced during the current year, although a more liberal scale of diet has been sanctioned by the Judicial Commissioner. District officers were in the habit of purchasing wheat at bazar rates, grinding it in their gaol mills, and charging for Atta in their monthly accounts, crediting the gain to the profit on manufactures. I have issued strict prohibitory orders to this arrangement for the future. Atta is to be charged for at the bazar rate of wheat, allowing a certain wastage per maund in grinding. This will make a considerable difference in the annual cost of prison food: for example at Oonao, within the last three months, the cost of food for prisoners has been reduced seven annas per head per mensem.

17. Colum 9, "Average Cost of Bedding and Clothing." The reduction under this heading to the extent of *A.* 12. 5. per man is very creditable, considering the great increase in the number of prisoners and the quantity of new clothing required; it is, however, much higher than I could wish it to remain, *Rs.* 2. 13. 6. per head; but so long as the wear and tear at out-door labour exists, it will be necessary to renew the greater part of the clothing every year. It must be observed, however, that there have been other causes for the high

CHAP. XV. Oudh.

rate of this item; it has always been the great source of profit and peculation for the native officers. The hot and cold weather clothing, when changed at the end of each season, was scarcely ever seen again, and no proper account appears to have been kept of that in store.

Circular No. 4, dated 21st March 1861.

I have lately issued such instructions as will ensure greater economy for the future. I beg, moreover, to urge the advantage of district officers employing their prisoners to make up all articles required for prison use, in preference to purchasing them in the bazar, and working their men on fancy articles that do not meet with a ready sale. The requirements of the gaol should be the first consideration, and spare men and spare time should alone be employed on remunerative manufactures. The native officials invariably oppose this system; it prevents their obtaining a per-centage on the materials; it tends to lessen the out-turn of such articles as yield direct profits; and so again interferes with the amount of per-centage to be divided amongst the gaol establishment at the end of the year.

18. Tabular Statement No. III. shows the proportion of mortality and sickness; also the total cost of all hospital charges for each gaol during the year 1861. It is gratifying to find, on reference to this table, that although the average number of prisoners has increased by 879·07 on the previous year, the daily average number of sick have decreased by 11·28, and the deaths to strength per annum by exactly 109; the per-centage of deaths to strength on the whole is only 7·54, whereas in 1860 it was 17·74, giving a reduction of 10·20 per each; and had it not been for the high rate of mortality at Fyzabad (nearly 17 per cent. to strength), the average of deaths would not have been unreasonably great. I shall remark upon the above excessive mortality when treating of the management of particular gaols.

19. I beg to call attention to column 9 of this Statement, and again to notice the success which has attended a closer supervision of the hospital diets on the part of medical officers. There is an actual reduction of *Rs.* 581. 0. 1. in the face of an increase of 879·07 prisoners, or *Rs.* 3,528. 0. 11. in 1861, to *Rs.* 4,109. 1. 0. in 1360. I will abstain from making any further remarks on the sanitary state of the Oudh prisons, as it is my intention to do so very fully in my next report, by which time opportunities will have been afforded me of offering more decided opinions on the subject. One point, however, I feel convinced of, that as the area and ventilation of the sleeping wards are increased, so will be the health of the convicts confined in our gaols. I attribute 8-10ths of the sickness in prisons to the unnecessary manner in which the prisoners are cooped up at night, merely that the native guard and officials may be spared a little extra vigilance and attention; this I am determined to remedy in the first gaol that is completed on the radiating system. I see no reason why the short termed and well-behaved prisoners should not be allowed to sleep in the enclosed yards and worksheds.

20. Statement No. IV. is little more than a repetition of No. II.; it is gratifying to remark, on reference to column 5, the enormous reduction there has been in the cost per head per annum in all the gaols throughout the province, with the exception of the two noted in the margin; that of Roy Bareilly is so excessive, that I have thought it necessary to call for explanation, which will be forwarded with this report.

Increase per head.

	Rs.	*a.*	*p.*
Baraitch	9	15	2
Gonda	6	11	2

21. Statement No. V. shows the "sex and age" of all convicted prisoners on the last day of the year 1861; there is nothing worthy of remark, except, perhaps, the number of prisoners under the age of 20 years, they amount to 306; the proportion of female prisoners is also large, namely 189.

22. Statement No. VI. showing "previous convictions" is very incomplete, and I fear not much to be depended on; the information on this subject will be more carefully collected for the future.

23. It will be observed, on reference to Statement No. VII., that out of a gaol population of 12,367 souls, there were only 188 who could read and write. I cannot suppose this statement either to be correct; little progress has been made in prison education, nor can we expect to do so much in this department of gaol discipline until some of the larger gaols are completed.

24. Statement No. VIII. shows the direct cash profits on gaol manufactures paid into treasury during the year to amount to only *Rs.* 2,818. 13. 2.; but when it is remembered the large amount that has been earned by prisoners employed on the new gaol buildings throughout the province by the department public works, also in grinding wheat and making prison clothing ("called indirect profits"), I think we may congratulate the gaol department in having earned the large sum of *Rs.* 46,618. 10. 2. Of this sum the prisoners engaged in building the new Lucknow Central Prison earned during 10 months 6,631 rupees at a rate fixed by me of half that of paid labour, and which during the current year will, I hope, exceed double that amount, and enable me ultimately to reduce very considerably the estimated cost of that building. If we add the "indirect" to the "cash profits," *Rs.* 2,818. 13. 2., we have *Rs.* 49,437. 7. 4., which may fairly be deducted from the aggregate cost of keeping prisoners in Oudh during 1861, leaving the expenditure on this account at *Rs.* 70,815. 8. 7., instead of *Rs.* 1,20,252. 15. 11. I have not included in this calculation the estimated saving to Government by the substitution of prison labour for paid establishment in performing the menial duties in the gaols, as it is rather a fictitious source of profit, and the loss incurred by hired labour, although much less in amount, may fairly be placed in the balance against it.

25. There

25. There is one point I cannot pass over without observation, namely, the great number of prisoners employed as servants in the different gaols, the average of which is as high as 23·12 per cent., in some it reaches 47·77 per cent. I have used every effort since my incumbency to remedy this waste of labour, and have in a great measure been successful, but there is still much to be effected.

26. Statement No. XIV. shows the number of escapes and recaptures; the former amounting to 28, and the latter to 15, leaving 17 prisoners still at large. The escape of nine prisoners from the Sultanpore gaol has been the subject of a special Report, and means have been adopted to prevent the possibility of a similar occurrence. Of the eight escapes from the Lucknow gaol three have been recaptured, one a long termed prisoner of desperate character; three of the five still at large are short termed men, who ran away from the insecure huts at new gaol buildings. When the new prisons are completed an escape from within the walls will be almost impossible, except when accomplished through the connivance of some of the gaol officials.

27. Table No. XV. is a nominal roll of the officers in charge of gaols during the year, and the date of receipt of the annual returns and statements by the Inspector of Prisons, the last of which I am sorry to say did not come to hand until the 17th May 1862, and must be my apology for the delay which has occurred in furnishing this Report. There will, I trust, be more punctuality in this respect for the future.

28. Table XVI. shows the number of prisoners to be 260, who have been flogged and otherwise punished in the different gaols in the province during the year 1861, and were it not for the high rate of punishments at Fyzabad, which were deemed necessary by the local authorities to enforce a proper observance of gaol discipline, the punishment roll would have been unusually small, considering the great number of long termed men and desperate offenders now undergoing their sentence in the prisons of Oudh.

29. It would appear from this Table there were only three solitary cells in existence during 1861, so that the punishments by that ordeal have been "nil;" when the three new gaols are completed there will be no want of means for enforcing this most valuable form of punishment, either for breach of gaol discipline, or as a mixed form of imprisonment.

30. Table No. XVII. gives admissions and releases of all classes of prisoners during the year; the total, however, is fictitious, as several prisoners are recounted after transfer to other gaols; the actual number committed in Oudh during the year, *vide* paragraph 6, is 10,342, and not 11,917; the total prison population should number 12,367, not 13,942 as shown in this statement.

31. As mentioned before, it will be impossibe for me to offer special remarks on the management of the several gaols, having had but a hurried opportunity of inspecting some of them. I will confine my concluding remarks in the most part to the present state of gaol accommodation in Oudh, and that sanctioned for the province, which is in progress of completion.

The probable requirements under the operation of the new penal code can be more accurately approached by statistics from the Judicial Commissioner's office.

	Prisoners.
The new Lucknow Central Prison when completed will contain with ease	2,500
Fyzabad Divisonal Gaol, now far advanced	1,200
Seetapore, which has been commenced	1,200
Sultanpore with Hawalat	550
Roy Bareilly with Hawalat	150
Pertabghur with Hawalat	100
Oonao	75
Durriabad with Hawalat	150
Gonda	75
Baraitch	100
Mahomdee	75
Hurdui	75
TOTAL	6,250

32. This Report is accompanied by copies of those from Commissioners of the different divisions. You will observe that Colonel Abbott requests earnest consideration "as to whether it is expedient to continue the Lucknow gaol press to its full extent, that it is too formidable a competition with the free press, and should only be kept up for the convenience of revenue and police purposes, printing of codes, &c., for which prison labour may be legitimately employed."

33. I entirely concur with the Commissioner; but under these restrictions it will be necessary that the gaol press should meet with full support at least to the extent above cited from all the civil authorities, so as to prevent this method of employing prisoners becoming a dead loss to Government, which it inevitably will be if the gaol presses are only worked by fits and starts, and the requisitions for the above named forms left entirely to the caprice of district officers.

34. I beg, therefore, to suggest that officers of the Commission be instructed to indent on the gaol press for whatever forms the Local Government may direct to be printed at that establishment; this will enable me to meet their wishes promptly, and keep up such an establishment on this branch of gaol manufactures as will ensure a certain number of prisoners being constantly employed and prove a fair profit to Government.

35. The Commissioner in his Report alludes to the want of proper prison accommodation at Durriabad; this has since been provided for on a scale to meet all the requirements of the districts.

36. The irregularities complained of by Colonel Abbott in submitting the monthly goal bills have occupied my particular attention, and great improvement has already taken place in this respect.

37. I do not feel the same concern expressed by him regarding the inadequate gaol accommodation in his division. The new central gaol, which is rapidly progressing towards completion, will hold upwards of 2,400 prisoners. Durriabad has been enlarged, and Oonao will never be required for more than 90 or 100 at most.

38. The civil gaol and hawalat at Lucknow will soon be placed in such repair as to contain an average of 130 prisoners under trial of all denomination, with two wards for European debtors.

39. It is very gratifying to observe the improvement in the health of the prisoners at the Lucknow central gaol during 1861.

The deaths were only 97 on a daily average of 1,152·76 prisoners, or 8·4 per cent. per annum; whereas in the previous year there were 237 deaths to a daily average of 723·01, or 32·78 per cent. per annum, and had it not been for a slight visitation of epidemic cholera amongst the gang on the new gaol buildings, the per-centage of deaths to strength would have been only 7·20.

A copy of my remarks on this epedemic is attached as an Appendix to this Report.

40. The Commissioner of the Baraitch Division in his able Report attributes the excessive mortality at Fyzabad to the correct cause, namely, the unhealthy position of the old gaol and the deficient accommodation and ventilation of the wards and hospital, and not to improperly cooked and unwholesome diet, in which view Dr. Bruce, the Inspector General of Hospitals, entirely concurs.

41. I am happy to be able to state that six barracks of the new divisional gaol, with a magnificent hospital, are now ready to receive the prisoners; they will be transferred before the commencement of the rainy season.

42. I must notice a clerical error in calculating the saving per head under "Native Medicines" at Fyzabad, which is stated both by the Commissioner and Deputy Commissioner in their Reports to be as high as *Rs.* 6. 7. 3. per head per annum; but I find in checking this calculation that it is only *Rs.* 5. 11. 8. on a daily average of 30·50 sick treated in hospital, and not on the whole number, which is *As.* 11. 5. This, however, amounts to a very considerable saving, and shows what can be done by proper supervision of expenditure in small matters.

43. I agree with the Commissioner in thinking that in estimating the sanitary condition of this gaol, the 190 cases of stripes should be excluded from the daily average of sick, which would reduce the per-centage very considerably.

44. Great efforts have been made at Fyzabad to increase and improve the manufactory department; they have made their own clothing, besides that for prisoners of other districts, and paid a small cash profit to the credit of Government. The paper, blanket, towel and other manufactures are very creditable, and when they have the advantage of good work-sheds and a well-organized system of intramural labour, I have no doubt will hold a very forward place as regards gaol manufactures.

45. The other two gaols of this division require no particular remarks, they are built on the model hawalat system, and when the repairs and enlargements are completed, for which sanction has been requested, they will contain from 75 to 100 prisoners each.

46. Colonel Clarke, the Commissioner of the Khyrabad Division, expresses himself satisfied in the diminution in the cost of the keep of prisoners at Seetapore during 1861; and as this part of the province was much influenced by the famine of the preceding year, the reduction of *Rs.* 27. 9. per head per annum for the keep of prisoners at Seetapore must be considered very satisfactory. There is one charge, however, which I must notice, namely, that of *Rs.* 6. 11. 3. per head for native medicines; the civil surgeon explains this excess as principally to be attributed to the large number of opium cases in the gaol during 1861. Opium when given to this extent amounts to an indulgence, it should never be sanctioned, except in emergent cases; the civil surgeon should be requested to scrutinise this expenditure more narrowly.

47. As all the available prisoners in this division have been made over to Department Public Works for the erection of the new gaol at Seetapore, not much profit can be expected from the manufactory department, but the executive engineer will receive credit for their labour, which will be carried to the gaol account at the end of the year under the head of "indirect profits."

48. The

48. The Mohomdee and Hurdui gaols have not been visited by me; I can, therefore, give no opinion on the accommodation they afford. I observe from the reports that there is no separate ward or hospital at either place; that the sick are located with the healthy. This shall meet with my earliest attention, as such an arrangement, in the event of epidemic disease, might prove disastrous. The Commissioner has already issued orders for temporary arrangements to be made to obviate such a result.

49. You will observe that both the Commissioners of Baiswarra and Baraitch have in their reports advocated the employment of additional European agency for the management of the divisional gaols at Fyzabad and Sultanpore. I scarcely think the time has arrived for laying this proposition before Government, and although I admit the advantage, and, perhaps, necessity of such supervision, I think it better to wait until these prisons are nearer completion, when the officers appointed can introduce a strict system of discipline, economy, and remunerative labour, which it will be impossible to effect while the majority of the convicts are employed at out-door work in building their own prisons.

50. The Commissioner, in his remarks on the gaols in his division, omits noticing the charge per head for police guard at Roy Bareilly, which amounts to *Rs.* 62. 9. per head per annum. The escapes from Sultanpore have been the subject of special report, but as the great inclosing wall is now completed, there will be no excuse for such occurrences for the future.

51. While on the subject of this gaol, I beg to urge that the opportunity of completing it, and converting the two barracks into a second-class prison, with a proper detail of hospital buildings, guard-rooms, and solitary cells, &c., should not be lost sight of. The Baiswarra division requires a divisional gaol as much as any of the others, and Government has, in the shape of unoccupied barracks, two buildings, which, at the small additional outlay of 6,000 rupees, can be converted into a complete divisional prison, capable of containing 550 inmates.

52. I need not further advocate the wisdom of such an arrangement; it would enable the Deputy Commissioner at Pertabghur to do away with one of the establishments at that station, which are both expensive and unsatisfactory.

53. In concluding this report, I must remark, that you had better not refer for comparative financial information in the large statement ordered to be prepared by Government, as the cost of the permanent police guard was not included in 1860. Statement No. II. of the old form is entirely to be relied on.

54. Trusting that the financial results, as shown in these tables, may be considered satifactory,

I have, &c.
(signed) *H. M. Cannon*, M. D.,
Inspector of Prisons, Oudh.

N. B.—Since writing the above, the explanation called for regarding the high rate of police guard at Roy Bareilly has been furnished, by which it appears they had entered an overcharge of *Rs.* 3,498. 15. 7., which will make considerable alteration in the figures of this report, causing the financial results to be more favourable. Copy of the correspondence is annexed, by which it will be observed that, instead of an increase per head per annum of *Rs.* 22. 15. 5. at Roy Bareilly, there has been a decrease of *Rs.* 10. 11. 2.

H. M. C.

(No. 251.)

MEMORANDUM.

Judicial Department,
Commissioner's Office, Lucknow Division,
1 March 1862.

THE gaol reports of the three districts of this division were received on the following dates:—

Lucknow - - - - - - - -	29th February.
Oonao - - - - - - - -	11th „
Durriabad - - - - - - - -	3d „

They are forwarded to the Inspector General of Prisons for compilation and report. The Inspector General, with the returns of other gaols before him, will be in a better position to form a comparison, and a decided opinion upon the comparative working of these gaols. I would merely call attention to the costs, which appear considerably too high, requesting him to suggest measures of economy and uniformity. I forward a set of rules that were drawn up for the working of the Lucknow gaol, and suggest their careful revision, and that a set of rules be printed in English and vernacular, for guidance of the officers concerned.

2. The Judicial Commissioner, in his memorandum, dated 12th ultimo, calls attention to certain particulars; for instance, the high charge of Lucknow gaol, and the mode of

crediting profits of prison labour at Oonao. By the Deputy Commissioner's reply, it will be seen that grinding atta is a direct source of profit, and has nothing to do with grain ground for the prisoners. The only objection I had to make to it was, that the gaol was grinding at a lower rate than the market price for labour, and I directed that it should be as high, for I object to the gaol under-selling labour, to the detriment of the poor labourers.

3. I would also request your attention to the consideration of expediency of continuing the gaol press to its full extent. I think it should be very much limited, and not be allowed to be such a formidable competition with the free press. I do not advocate its total abolition; it will be convenient to retain it for police and revenue purposes. For instance, the publication of the codes recently introduced at the lowest possible cost will be a benefit to the public in general, to which the labour may be legitimately employed, and I do hope this may be effected as speedily as possible.

4. The state of accommodation for prisoners at Nawabgunge is, I know, occupying your attention, and is urgently needed. Without tabulating the contents, it is not in my power to make any very valuable suggestions; but I have little doubt, as you proceed on this operation, you will find ample scope for notes, and plenty of room for improvement.

5. I will not, however, forget to mention the great irregularity with which the contingent bills of the Lucknow gaol have been received. The bills should be punctually prepared and submitted before the 5th of each succeeding month for which they are due, and in that case it will be invariably audited by the 15th of the month. With very ordinary arrangements this should be practicable, and will save much of the inconvenience that is felt at present.

6. Under the new Act our gaols will shortly be quite inadequate for the wants of this division. This must be carefully watched, and reported. The return will enable you to form some estimate of the increase there has already been, and what it is likely to be in future.

(signed) *S. A. Abbott*,
Commissioner and Superintendent.

(No. 210.—Judicial.)

From *David Simson*, Esq., Commissioner and Superintendent, Baraitch Division, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Oudh; dated Fyzabad, 12 April 1862.

Sir,

I HAVE now the honour to offer a few observations on the management of the gaols in this division during 1861, as shown in the annual returns.

2. The following statement shows the great increase which has taken place in the number of convicts:—

	Total Number of Admissions.	Daily Average Number of Prisoners.	Number remaining at Close of Year.
Fyzabad - 1860 - -	1,309	262·09	284
„ - 1861 - -	1,194	342·37	521
Gonda - 1860 - -	1,188	74·44	82
„ - 1861 - -	1,203	71·76	64
Baraitch - 1860 - -	827	111·87	49
„ - 1861 - -	687	87·04	90
TOTAL 1860 - -	3,324	446·40	415
„ 1861 - -	3,084	501·17	675
Difference - - -	240	*54·77	*260

In Fyzabad, the divisional gaol, the number may in general terms be said to have doubled. The prisoners from Gonda and Baraitch sentenced to terms exceeding six months, and even for shorter terms, should the number of prisoners exceed the capacity of the hawaluts there, are immediately transferred to Fyzabad, so that there ought not to be a large increase in the number of prisoners in these gaols; nor has this actually been the case at Gonda. But in Baraitch this rule has not been strictly acted on, and our gaol accommodation has been so defective at Fyzabad, and the prisoners were so healthy at Baraitch, that I have not enforced it. In point of fact, therefore, in Baraitch the prisoners have considerably increased also.

3. The prison accommodation has been very deficient, but you have yourself lately had an opportunity of inspecting the several buildings, and I have little to add to the account of them which I gave in my report for 1860. We managed to keep the mud walls of the temporary gaol at Fyzabad, referred to in that report, standing throughout the rains. About

About half the prisoners were usually confined in it, and they have been at least as healthy as those in the old gaol; so the project has answered well; and before the ensuing rains we hope to be able to occupy a portion of the new divisional gaol, and dispense with one if not both of the present makeshift buildings. The Baraitch hawalut has been finished, and in a style much superior to the Gonda one, by the Deputy Commissioner, Major Steel, who has given a good deal of attention to its erection; but I am unable to enter into details, as he has said nothing about the cost, &c., in his report, and the bills have not yet come in. Nothing has been done to the Gonda hawalut, but the addition of a female ward and a hospital has been sanctioned.

4. The health of the prisoners has been good in Gonda and Baraitch, but indifferent in Fyzabad. Out of the 58 deaths in the latter gaol, 54 were from diarrhœa and three from dysentery, and the Deputy Commissioner, in his report, has recorded the Civil Surgeon's opinion on the subject at length. The diet question has been fully discussed in the correspondence with the Judicial Commissioner marginally noted.* I then recommended that Indian corn should be dropped, and the mixture of wheat and atta definitely adopted, as has now been decided on; still I am not prepared to say that Indian corn, when properly cooked, is an unwholesome diet; and in the absence of any other reason, I am inclined to attribute the excessive mortality to the defective hospital accommodation and ventilation, which, in the opinion of the Inspector General, Doctor Bruce, were more than sufficient to account for it.

	Per-centage of Sick.	Per centage of Death to Strength.
Fyzabad - 1860 - - - - -	10·57	1·90
„ - 1861 - - - - -	8·82	4·85
Gonda - 1860 - - - - -	9·27	·168
„ - 1861 - - - - -	- -	·083
Baraitch - 1860 - - - - -	7·48	1·33
„ - 1861 - - - - -	7·01	1·02

5. Captain Reid enters into full detail regarding the expenditure, which I need not repeat. Suffice it, therefore, to say that I think he fully accounts for the increase of the averages in most of the heads of contingent expenditure. In gaols where the average strength of the prisoners is pretty stationary, and the stock of fetters, clothing, and cooking pots, &c., has once been laid in, the advantage in calculating averages per head rests chiefly with the gaol in which the greater number of prisoners is confined; but in a gaol like Fyzabad, where the increase has been very great and rapid, and new stock had to be purchased, it is clear that the result would be just the opposite. Captain Ross also accounts for the increase of charge, which is not excessive. The Baraitch return is not before me; but the principal increase, I believe, has been in the diet, caused by the Deputy Commissioner's buying in a stock of wheat when he expected prices to rise still higher on account of the famine, while, in point of fact, they soon after fell, so that the speculation turned out a bad one.

6. Hospital charges have greatly decreased in the Fyzabad Gaol, which proves the correctness of the opinion I last year expressed. The averages in Gonda and Baraitch are much higher, but the smaller number of prisoners accounts for this.

7. I regret to see so many juvenile offenders confined in gaol, though the total number is not great. If the Whipping Act is not speedily passed, a reformatory will not only have become a desideratum, but a necessity, though the establishment of such an institution in this country on a sound basis is not without difficulties.

	12 to 16 years.	16 to 20 years.

Total 1860	4
„ 1861	2

8. The escape statement is very favourable, only two prisoners escaped from the Fyzabad gaol, and none from Gonda or Baraitch. The result may be reviewed in various ways, and is due, I am afraid, fully as much to the easy work exacted from the prisoners as to the care of the contingent guards. While the great bulk of the prisoners are employed outside the gaols, the enforcement of hard labour and prison discipline, in the proper sense of the term, is universally allowed to be impossible.

9. There are, of course, no manufactures, except in the Fyzabad gaol. The results are given by Captain Reid, and are as good as could be expected. The mistake in the last year's statements referred to by him was then discovered by me, and corrected in my report.

10. Statements 9, 10 and 11 require no remark. I am glad, however, that you have now made the difference between the price of atta and wheat a matter of account, instead of a cash transaction, by which the chance of embezzlement has been greatly lessened.

11. As remarked last year, statement No. 12 should be blank, and statement No. 13 has again been misunderstood.

12. The number of prisoners released on account of sickness has been considerable in Fyzabad. I am glad to see the order was, of course, invariably given on the strong report of the civil surgeon, and the mortality in that gaol, I think, fully justified his recommendations.

	Good Conduct.	Sickness.

TOTAL 1860	3	5
„ 1861	4	18

13. I fully agree with Captain Reid that flogging is required as an *ultima ratio* to support gaol discipline; but I cannot coincide with him in the inference he leaves us to draw from his remarks, that the system of administering it, as it obtained in the Fyzabad gaol in the earlier months of the year, was a good one. The practice then was to punish every slight breach of gaol discipline with five or six stripes, owing to which the frequency of the punishment was greatly increased, while its effect, both owing to its frequency and the lightness of the punishment, was proportionably diminished. I therefore directed that for first and petty breaches of discipline, other punishments, such as the hand-mills, &c., should be preferred, and that when it was necessary to flog an obstinate offender, or for an aggravated offence, the flogging administered should be sufficiently severe to afford an example to the other prisoners.

14. I most thoroughly concur with Captain Reid, however, as to the desirability of obtaining additional European agency for the management of so large a gaol as the Fyzabad one; but this is not the place to discuss the question at length.

15. Mr. T. Kavanagh, Assistant Commissioner, has again prepared a caste statement, the results exhibited in which are much the same as last year.

16. The delay in writing this letter has been caused by the transmission of the original Baraitch statements direct to your office, and the receipt of duplicates only yesterday, though they have repeatedly been called for for some time past.

I have, &c.
(signed) *D. Simson*,
Commissioner and Superintendent of Baraitch Division.

(No. 16.—Judicial.)

From *St. George Tucker*, Esq., Commissioner and Superintendent, Baiswarra Division, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Lucknow; dated Sultanpore, 1 April 1862.

Sir,

WITH reference to the 2d paragraph of the Judicial Commissioner's Circular, No. 31, of 13th February, I have the honour of forwarding herewith the annual gaol returns and reports for the three districts in this division, with a memorandum by myself.

MEMORANDUM

MEMORANDUM by the Commissioner and Superintendent, Baiswarra Division, on the Gaol Returns for 1861.

Expenditure.

THE expenditure on buildings has been trifling. A sum of 500 rupees was sanctioned for adapting the barracks at Sultanpore to the purposes of a gaol. It has not been debited in the accounts for 1861. Upwards of 1,000 rupees more will be required. The Inspector of Prisons has already given full instructions regarding the adaptation of these buildings. I would recommend that they be placed under charge of Doctor Constant, who would report to the Inspector of Prisons through the district officer, and I hope that a sufficient permanent establishment may be sanctioned.

2. With reference to Captain Perkin's remarks on the hawalut, I am of opinion that it will answer well enough for the present for prisoners under trial. It is near enough to the cutcherry, and close to the public lines, so that the relief of sentries can be very easily made.

3. The miscellaneous charges are high at Sultanpore; the clothing and bedding charges are high at Pertabghur. Those for contingent guards are enormous at the latter station. An explanation has been called for.

4. The cost of native medicines is high at Roy Bareilly and Pertabghur, but very moderate at Sultanpore.

Health of Prisoners.

5. The health of the prisoners has been good; particularly so at Sultanpore. I beg that the services of Doctor Constant may be brought to the notice of Government. I believe that he is well satisfied with the native doctor, Ghumundee Lal.

6. With reference to Appendix II., the Deputy Commissioner of Pertabghur has omitted to record the expense incurred for the gaol guard. He has been requested to supply the omission.

Previous Conviction.

7. With reference to Appendix VI. of the Statements, I am of opinion that it cannot be relied on. We have not hitherto been able to ascertain all the previous convictions of prisoners.

Receipts.

8. With reference to Appendix IX., the Deputy Commissioner of Pertabghur has been requested to explain on what principle he has calculated that the convicts have earned for Government 3,477 rupees in the construction of public buildings. I am at a loss to understand what buildings are alluded to.

Appendix XIII.

9. The district officers have not hitherto had sufficient space within their gaols for the employment of convicts on manufactures. Some have been employed in grinding wheat, expressing oil, and weaving blankets. The manufacture of paper and tât puttee (gunnee cloth) would be profitable, especially the latter. The material can be obtained in almost any quantities within 12 miles of Sultanpore or Pertabghur.

Appendix X.

10. Out of door, ramming down kunkur is, I have found, the best employment for prisoners who wear irons. They have not to walk much, and are not liable, consequently, to get sores on their ankles.

11. I recommend, however, that the mass of the convicts confined in this division should be employed within gaol inclosures. Here labour is cheap and wages low. The contrast between the ill-fed honest poor and the well-fed prisoners is demoralizing. The employment of prisoners out of doors is undoubtedly good for their health, and I would, therefore, recommend the transfer of all prisoners sentenced to more than four months for simple theft, budmashee, and breach of the Salt and Abkaree Laws, to the districts beyond the Gogra, where labour is scarce and food cheap.

12. With reference to Appendix XIV., for Sultanpore, I forward herewith the correspondence regarding the escape of nine of the prisoners.

13. The Deputy Commissioner of Pertabghur has omitted to notice the escape of two life convicts while on their way to Allahabad. It appears to me, that until an officer in charge of a gaol has received a receipt for a transferred prisoner, he is not at liberty to enter him in column 10 of the Statement A., Gaol Return, and should enter him in column 9 in the event of his escaping on the road. The correspondence on this subject also will be forwarded should you wish to see it. A copy of Mr. King's explanation received to-day is appended.

(signed) *St. G. Tucker,*
Commr. and Supdt. of Baiswarra Division.

(No. 5.—JUDICIAL.)

From Colonel *J. Clarke*, Commissioner and Superintendent of Khyrabad Division, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Oudh.

Sir, Dated the 13th March 1862.

I HAVE the honour to forward herewith, in original, the Gaol Reports and Returns of this division for 1861; they show, I think, that as much has been done as could be expected.

2. The additional accommodation in the Hurdui gaol, referred to by the Deputy Commissioner as sanctioned by me, is to cost 250 rupees, and will be paid for from the amount in hand on account of fines levied for the destruction of public buildings during the mutiny.

3. I am of opinion, as I have always been, that each district should have a proper gaol building capable of accommodating 150 or 200 prisoners.

4. The general results of the Return now submitted show a diminished net cost of each prisoner during the past year, and I know from frequent personal observation that all that attention to management can do, under the circumstances, has been done.

5. As these Returns and Reports are over due, I do not detain them for further comment; but should you desire such, which, however, I do not think I can offer with any advantage, I shall be happy to attend to your wishes.

I have, &c.
(signed) *J. Clarke*,
Commr. and Supdt., Khyrabad Division.

(No. 10.)

From *H. M. Cannon*, Esq., M.D., Superintendent, Lucknow Gaol, to *F. Douglas*, Esq., M.D., Civil Surgeon, Lucknow.

Sir, Dated Lucknow, the 27th January 1862.

I HAVE the honour to submit a short sanitory Report of the gang of prisoners working under my orders at the new central gaol buildings between the Alumbagh and Cantonments.

As regards the topography, the position of the new site is, I think, unexceptionable, the ground is high, and capable of being well drained on all sides. During the late trying rainy season, when almost every part of the neighbouring country was under water, the land selected for the new central gaol remained high and dry.

The prisoners went into temporary huts erected for them on the ground on the 25th February 1861, and from that period to the end of the year the daily average strength of the gang has been 476 working prisoners.

The men have been well fed, well clothed, and well sheltered from the weather; they have done a fair amount of remunerative labour, and I have every reason to be perfectly satisfied with their sanitory condition.

The daily proportion of sick to strength has been under two per cent. (or 1·88), and had it not been for a short but severe visitation of epidemic cholera, which made its appearance during the very heavy rains on the 3d September 1861, the mortality would have been a mere fraction.

It may be interesting to make a few remarks on the curious advent of this disease; it appears to have travelled slowly from the Muchee Bhawun Fort in a direct line to Cantonments (a distance of three miles), carrying off a solitary individual at long intervals on its way; it then crossed the Roy Bareilly road from the extremity of Cantonments, and attacked the sick in my temporary hospital at the gaol works on the 3d September 1861.

I next morning took prompt measures and had tents pitched quarter of a mile from the other prisoners, and had the ground inside and outside thickly strewed with hot ashes from the lime and brick-kilns. This was done once a day so long as the sickness lasted; nevertheless in 14 days there were 25 cases admitted, 14 of which were fatal. These were, however, confined (with two exceptions) exclusively to the sick in hospital. Two mehters who were selected for menial duties at the hospital tents were the last attacked, and died on the 17th and 18th, when the epidemic ceased as suddenly and unexpectedly as it appeared; causing one casualty on the 20th in a village on the Cawnpore road, about a quarter of a mile off, which was the last I heard of it in the neighbourhood.

I must

I must here remind you that the fact of my worst cases of sickness, with the exception of those of cholera, have been sent into the City Gaol hospital for treatment, has tended to reduce my per-centage of sick, and in the same ratio increased yours. I believe, however, I am correct in stating that of those sent in by me for treatment only three have died, making a total number of only 17 deaths in connexion with the gang under my supervision.

An Abstract Tabular Statement is herewith attached.

TABULAR STATEMENT of PRISONERS employed from 25th February to 31st December 1861.

* Last year's balance was 47, excluding Hawaluts, &c., while this includes them.
† This does not tally with column 4 of Return A., because the four re-captured are not included here.

Inspector of Prisons' Office, Lucknow, 20 May 1862.

(signed) *H. M. Cannon*, Inspector of Prisons.

APPENDIX C (2).

(No. 387.)

From *G. Campbell*, Esq., Judicial Commissioner of Oudh, to *H. M. Cannon*, Esq., M.D., Inspector of Prisons, Oudh.

Sir, Dated Lucknow, the 3d June 1862.

I HAVE the honour to acknowledge your report upon prisons for the past year, which will be submitted to the Chief Commissioner; meantime I communicate a few observations.

2. With reference to your 17th paragraph, I quite agree that prisoners should, as far as possible, make articles required for prison use, provided only a suitable labour is thus supplied. I would not sacrifice punishment to this object. For instance, in the Lucknow gaol almost all the able-bodied villains used to be employed twisting a small bobbin on the pretext that the thread was required for blankets. That was making penal servitude a mere farce.

3. I entirely agree in the remarks in your 19th paragraph, that the prisoners should not be more than is really necessary cooped up at night, and that care should be taken to prevent the guard doing so to save themselves trouble. I am decidedly of opinion that in all securely arranged gaols the prisoners should be allowed to sleep out in the ward-yards in the hot weather, with the exception only of those imprisoned for very long terms, or of a dangerous character, and even in respect to long-term men, when it can be safely done, such indulgence is desirable.

4. A juvenile reformatory would be very desirable; but I observe that most of the prisoners classed as juvenile are between 16 and 20. The number of very young boys is not yet large.

5. I trust that you will carefully test the future returns of prisoners who can read and write, and that you will soon be in a position to devise effective means for increasing the number.

6. Effort should also be made to obtain something like a correct return of previously convicted prisoners.

7. There appears to be some mistake in the statement of cash profits. The Lucknow gaol would appear, according to the statement, to have lost heavily in manufactures instead of gaining, and the sums credited appear to be merely a part of previous cash balances, the rest of which has disappeared. The profit in the other gaols is small. To show the account correctly it seems necessary that stock in hand should be included. I beg of you to revise the statement and explain how the matter really stands as regards the Lucknow gaol. I trust that there will be good profit in future. No commission is to be paid to any official in any gaol till after I have sanctioned that course on a report showing clearly that permanent profit comes regularly in from manufactures of a permanent and well established kind.

8. I do not think that you are correct in deducting indirect profits from the total expenditure, because if these sums had not been saved they must have been added to account of expenditure partly in our accounts and partly in those of the Public Works Department for gaol building.

9. You should see that the men employed on gaol services are kept within the prescribed limits. Some of those making up the proportion quoted by you seem to be employed on occasional duties not usually classed under this head. The quarterly returns did not show excess.

10. I have already expressed an opinion that the excessive resort to flogging in the Fyzabad gaol is injudicious, and am glad that the Commissioner has taken measures to put a stop to it.

11. The mortality in the Fyzabad goal proves to be so high that I think some special report should have been made at the time. I beg that you will report what has been the sanitary state of the prisoners in this gaol during the last — months.

12. I have seen no signs that the gaol press has unfairly affected private enterprise; on the contrary, I find that people who desire to establish presses have been prevented on supposed political grounds, and one private lithographic press has much of a monopoly. But if the trade be entirely free, it may be well principally to do Government work at a cheap rate at the gaol press. I should like to know if you have printed the judicial forms which I lately sent, and circulated cheap rates at which you are ready to supply them.

13. It is gratifying to know that the mortality in Lucknow has been so much reduced.

14. And I am sure that the best thanks of the Government are due to you for the rapid and efficient way in which you have pushed on the central gaol.

15. I agree

15. I agree with you that the excessive charges for opium and native medicines, on which you remark, must be cut down.

16. I am glad to learn that the excessive charge for police guard in the Roy Bareilly Gaol is a mistake. But to make sure that there may be no errors and over-charges in future, I beg that, after ascertaining the exact state of each gaol, you will settle with Colonel Barrow the guard to be kept up for each, and submit a general statement of the whole.

17. Seeing the delay in the periodical returns, and with a view to enable us to meet the increasing number of prisoners, and to prevent any confusion, I beg that you will call on each district officer to furnish you by return of post with following present state of his gaol and submit the whole to me:

1st. Whether any and exactly what additions have been made or will be completed before the rains; what is the present accommodation, and how many it is fitted to hold, or will positively without fail be fitted to hold before the rains.

2d. Present number in the gaol, including prisoners of all kinds.

3d. Up to what term prisoners are kept and beyond that term, and where those beyond that term are sent.

18. Be so good as to communicate to local officers such of the above observations as it is necessary that they should know.

I have, &c.
(signed) *G. Campbell,*
Judicial Commissioner of Oudh.

APPENDIX D (2).

(No. 1467.)

From the Secretary to the Chief Commissioner of Oudh, to the Judicial Commissioner of Oudh.

Sir, Dated Lucknow, 11 July 1862.

I HAVE the honour, by direction of the Officiating Chief Commissioner, to acknowledge receipt of your letter, No. 388, dated 3d ultimo, submitting the Inspector of Prisons' Report on Gaols with prescribed returns for the past year, and to make the following observations:

2. The statements show a daily average of 2,598·36 against 1,719·29 of the previous year, or an increase of about 50 per cent., while there is a decrease in the total average cost of *Rs.* 9. 9. 3., per head; the error in the Roy Bareilly returns has been rectified in the statements, and the only exceptions to the general decrease are Baraitch and Gonda in the former of which there is an increase of *Rs.* 9. 15. 2., and in the latter *Rs.* 7. 11. 6. This increase is, however, chiefly attributable to the excessive cost of the permanent gaol police guards, which the Inspector of Prisons has already considerably reduced; and on which he promises a still further reduction during the year.

In other items also the Officiating Chief Commissioner observes with satisfaction that the Inspector hopes to carry still further the measures of economy which have been fairly successful during the year under review.

3. The great diminution of both sickness and mortality is very gratifying, and there are good grounds for believing that when the new gaols are finished, there will be a still further improvement in the health of the prisoners. The Officiating Chief Commissioner believes there is much truth in Dr. Cannon's remark that the prisoners suffer from being cooped up at night, and he approves of the suggestion that short-term and well-behaved prisoners should be allowed to sleep in the work-shed and enclosed yards at seasons of the year when exposure to the night air may not be considered objectionable.

4. The gaol accommodation has, as you remark, been greatly improved, specially in Lucknow, where Dr. Cannon has been most energetic, and in Fyzabad where the divisional gaol under the supervision of the executive engineer is in a forward state.

Rs. 20,000 have been set apart in the budget for district gaols; from this a grant of 6,000 rupees has lately been made to meet the cost of the additions and improvements in the Sultanpore gaol referred to in your 8th paragraph. For most of the minor district gaol grants have been made to provide for necessary improvements (*vide* my letter, No. 473, of 28th May), and for the other similar grants will be made on receipt of the information called for in my letter above quoted; but the Officiating Chief Commissioner does not agree with you that these buildings are in a lamentable state; on the contrary he thinks that, with the additions and improvements which will be provided for this year, they will be found quite sufficient for our present requirements.

The inspector shows in his 31st paragraph that the total gaol accommodation for the province will be ample.

In the Lucknow civil gaol it is believed that suitable quarters have been provided for Europeans and natives of respectability.

5. The Officiating Chief Commissioner concurs in your remark on the desirability of employing the gaol press to do Government work at a cheap rate.

6. However desirable a reformatory for juvenile offenders may be, the Officiating Chief Commissioner doubts very much whether the plan you propose would be at all likely to succeed; he will be glad if you will, in concert with the Inspector of Prisons, make arrangements for a serviceable treadmill in the central gaol, and submit a rough estimate of the probable cost.

7. In conclusion, I am desired by the Officiating Chief Commissioner to express his obligations to you for your careful and efficient supervision, and to state that he considers that Dr. Cannon, Inspector of Prisons, has done excellent service, particularly in the construction of the central gaol; and that considering the disadvantages under which they laboured, the general results are satisfactory and creditable to the officers who had been in charge of gaols during the year.

I have, &c.
(signed) *J. Reid*,
Officiating Secretary to the Chief Commissioner
of Oudh.

APPENDIX, E (2).

APPENDIX M. (2).

MEMORANDUM.

1. WITH a view to regulate the expenditure of local funds so as to ensure their being applied in the manner most advantageous to the public interests, the Officiating Chief Commissioner has determined on classifying the several roads in the province and directing the attention of district authorities to the construction of those which appear of primary importance.

2. The roads will be divided into the following classes:—

(I.)—Imperial.
(II.)—Provincial.
(III.)—Main district roads.
(IV.)—District roads.

1. Lucknow to Cawnpore.
2. Lucknow to Shajehanpore.
3. Lucknow to Fyzabad.
4. Lucknow to Byram Ghat.
5. Roy Bareilly to Dalamow Ghat.
6. Fyzabad to Allahabad.
7. Fyzabad to Gonda.

3. Imperial Roads.—It is unnecessary here to make any remarks on these, as the cost of their construction and maintenance is defrayed from the Imperial revenue and not from local funds. They will be coloured red on the maps. A list of the present Imperial roads is marginally given. The road from Lucknow to Roy Bareilly is at present an Imperial line, but it will be transferred from the Public Works Department to the district authorities, while the road from Seetapore to Shajehanpore, which has hitherto been repaired from local funds assisted by grants-in-aid, will be made an Imperial line.

4. The Officiating Chief Commissioner has determined that the following shall for the present be the provincial roads, as they traverse large sections of this province and connect

nect the Imperial roads with the principal towns of neighbouring districts. They are marked in continuous black lines on the map:—

(I.)—Lucknow to Jounpore *viâ* Roy Bareilly, Salone, Pertabghur and Padshapore.

(II.)—Lucknow to Jounpore *viâ* Sultanpore.

(III.)—Fyzabad to Roy Bareilly.

(IV.)—Bulrampore to Seetapore *viâ* Gonda, Secrora and Byram Ghat.

(V.)—Utroulah to Seetapore *viâ* Bulrampore, Ekonah, Baraitch and Chelaree Ghat.

(VI.)—Khyreeghur to Cawnpore *viâ* Luckhimpore, Seetapore, Neemkar, Beneegunge, Sundeela and Russoolabad.

(VII.)—Lucknow to Shahjehanpore, *viâ* Sundeela, Hurdui and Shahabad.

The exertions of the local Committees of the several districts through which these roads pass should be principally devoted to them. They should be considered first class roads, and their width should be uniform (see paragraph 5 of Circular No. 4–83 of 1862) and a side line should always be maintained on them. No time should be lost in constructing permanent bridges wherever required. Further instructions will be given regarding each road.

Lucknow to Jounpo *viâ* Roy Bareilly, Salone, Pertabghur and Padshapore

5. The first portion of this road has, up to this time, been under charge of the Public Works Department. It is described by the chief engineer as a fair road, partially embanked, but not metalled; temporary bridges provided throughout the line. Any sums sanctioned for the repairs of this section during the current year will be expended by the Public Works Department, and from 1st May 1862 it will be made over to the district authorities. The chief engineer will be requested to furnish any information in his power regarding the requirements of the road in regard to raising, embanking and bridging.

The second section of the road, from Roy Bareilly to Salone, lies partially within the Roy Bareilly and partially within the Pertabghur District; a bridge of considerable dimensions is in course of construction near the boundary of the two districts, and sufficient funds for its completion have, it is believed, been provided.

On the third section, lying between Salone and Pertabghur, are several very large bridges. The civil engineer has lately been deputed to inspect the sites where these bridges are required, and to prepare plans and estimates for their construction. A grant-in-aid of 14,000 rupees has been made for this line, but no information has been afforded as to its expenditure up to the present date.

	Rs.
Grant-in-aid	14,000
Roy Bareilly	6,450
Pertabghur	3,500
Total — Rs.	23,950

The last section is between Pertabghur and Padshapore in the Jounpore District, An allotment has been for this road from the road and ferry funds of the Pertabghur District, but it is doubtful whether the sum allotted will be sufficient to make the road passable at all seasons of the year.

Lucknow to Jounpore *viâ* Sultanpore.

6. This road, as far as Saltanpore, was formerly under the Public Works Department, but has lately been transferred to the district authorities. A grant-in-aid of 9,850 rupees has been assigned to this road during the current year, of which 5,000 rupees is to be expended in the Lucknow District, and 4,850 rupees in that of Roy Bareilly. A further sum of 15,000 has been granted for the repair and completion of a large bridge over the Lonee Nullah. The total assignments are given in the margin.

	Rs.
Grant-in-aid	9,850
Lucknow	5,000
Sultanpore	4,000
Total — Rs.	18,850
Additional grant	15,000
Total — Rs.	33,850

The Lucknow Local Committee has assigned a considerable sum to this road, and has expressed its determination to expend the grant-in-aid in the construction of bridges.

The attention of the Sultanpore and Roy Bareilly Committee should be called to the importance of this line, and they should forward surveys of such portions as lie within their respective jurisdictions, accompanied by a detailed report of the principal requirements in the shape of earthworks and bridges.

Fyzabad to Roy Bareilly.

7. The Officiating Chief Commissioner has lately travelled over the greater portion of this line. The section situated within the Fyzabad District will be completed as a raised, bridged, but unmetalled line during the current year. The Committee should now devote any funds at their disposal to metalling the road, which is one of the most important in the province.

	Rs.
Grant-in-aid	4,700
Fyzabad Road and Ferry Funds	8,421
Total — Rs.	13,121

A bridge of boats has already been constructed at Amghat, at a cost of 3,500 rupees, and it is hoped that the tolls collected will in future cover the cost of maintenance.

The section in the Roy Bareilly and Sultanpore Districts has not been satisfactorily constructed. The old line of road has been taken and widened without any attempt being made to cut off unnecessary curves, or to divert the line so as to connect any important marts, such as Shunkergunge and Tilloee, lying but little removed from the old track. A sum of 8,000 rupees has been assigned as a grant-in-aid to this section of the road, and the sums marginally noted have been apportioned by the Road and Ferry Fund Committees for its construction.

	Rs.
Grant-in-aid	8,000
Sultanpore	2,700
Roy Bareilly	6,000
Total — Rs.	16,700

CHAP. XV. Oudh.

The Officiating Chief Commissioner has directed that no further expenditure may be incurred on this section of the road until a survey of it has been made by a competent engineer. The chief engineer has been addressed on the subject, and meanwhile the Commissioner of Baiswarra has been desired to put a stop to all works on the road, and to forward a statement showing exactly what balance remains unexpended both of the grant-in-aid and of the assignments made by the local committees.

Bulrampore to Seetapore *viâ* Gonda, Secrora and Byram Ghat.

8. The Officiating Chief Commissioner has traversed the greater portion of this line also, and considers it one of the most important in the province.

Little or nothing has been done on the first section of the road, viz., from Bulrampore to Gonda. A sum of *Rs.* 257. 7. has been assigned for the completion of the road, and *Rs.* 3,959. 12. 2. for bridges. A very large sum will be required for raising and embanking the road, but no time should be lost in crmmencing this work whenever funds may be available.

For the second section of the line, from Gonda to Byram Ghat, a grant-in-aid of 8,700 rupees has been allowed, and the Local Committees have assigned the sums marginally noted for the construction of bridges on the line. It would be advisable for these committees to devote a large proportion of the sums at their disposal from other sources than the Road and Ferry Funds to the completion of this line as a metalled road throughout. Should they be able to do this, the Officiating Chief Commissioner would ask the chief engineer to allow Lieutenant Sweetenham, now in charge of the Gonda and Fyzabad Line, to take charge of the supervision of this road also.

	Rs.
Baraitch	1,989
Gonda	3,841
Total *Rs.*	5,830

As regards the third section, from Byram Ghat to Seetapore, which may be considered the most important of the whole, the Officiating Chief Commissioner is of opinion that a more direct route might have been chosen; but as considerable expense has been incurred in constructing the present road, which connects several towns of importance, he will not insist on a new line being laid out. Every exertion should be made to complete the metalling of this road, and as soon as the funds for this purpose are available, on which point the Commissioners of Lucknow and Kyrabad are requested to report at an early date, the supervision of the work will be entrusted to the executive engineer of Seetapore.

	Rs.
Seetapore	2,300
Grant-in-aid	11,500
Total *Rs.*	13,800

Utroulah to Seetapore *viâ* Bulrampore, Ekonah, Baraitch and Chelaree Ghat.

9. A glance at the map will show the importance of this line, connecting, as it does, the Rohilcund Division with the Trans-Gogra districts of this province and Goruckpore.

The road from Utroulah eastward to join the road from Bansee in the Goruckpore District should be made at once, either to Dumurriah Gunge or Biskohur. The sum of *Rs.* 178. 2. 3. allowed by the Gonda Committee for constructing the section of this road between Utroulah and Bulrampore is quite inadequate, while a far larger sum than 166 rupees will be required for the bridges on it.

The Baraitch Committee have assigned a sum of 160 rupees for marking out that portion of the second section of this road which lies in their jurisdiction; but nothing appears to have been done or contemplated by the Gonda Committee for the construction of the line between Bulrampore and the borders of the district towards Ekonah. This must be done at the earliest opportunity.

A sum of 850 rupees has been assigned for the construction of the road from Baraitch to Chelaree Ghat. It is probable that a much larger sum will be required to make this passable throughout the year.

	Rs.
Seetapore Road	3,000
Boats	400
Bridges	1,500
Total *Rs.*	4,900

The Seetapore Committee has made provision for the construction of the road from Chelaree Ghat to Biswee; at this point this road will join the preceding one. The Officiating Chief Commissioner does not propose to carry it further at present, though eventually it may be extended to the Ganges at some point found most advantageous.

Khyreghur to Cawnpore *viâ* Luckhimpore, Seetapore, &c.

10. This is an important line connecting the extreme north of the province with the large military station of Cawnpore.

The sums noted in the accompanying statement have been allotted to the different sections of this road by the local committees of the districts through which it runs. Only one portion has not been provided for, viz., that which lies between Sundeela and Ooras. The Commissioners of Lucknow and Khyrabad are requested to make arrangements for the construction of this portion of the line as soon as practicable with a view to complete the line of communication throughout. The sum of 740 rupees proposed to be expended in the construction of a bridge on the Pilkhannah Jheel on the road between Sundeela and Benegunge has not yet been sanctioned. Further report on this is awaited.

Lucknow to Shajehanpore *viâ* Sundeela, Hurdui, and Shahabad.

11. This is a more direct route to Shajehanpore than the Imperial Line *viâ* Seetapore. A grant-in-aid of 10,000 rupees has been given to this road, and the local committees have also assigned the sums shown in the Statement.

12. The main district roads are those which connect one division with another, and act as feeders to the Imperial and Provincial roads. They are marked on the map by dotted lines, and are as follows:—

(I.)—Baraitch to Belwa Bazar *viâ* Secrora.

(II.)—Nanpara to Roy Bareilly *viâ* Byram Ghat, Darriabad and Nyapoora Ghat.

(III).—Fyzabab

(III.)—Fyzabad to Azimghur *viâ* Tandah.

(IV.)—Tandah to Jounpore *viâ* Jelalpore.

(V.)—Tandah to Dalamow Ghat *viâ* Sultanpore, Amethee and Salone.

VI.)—Shajehanpore to Dalamow Ghat *viâ* Shahabad, Sandee, Belgram, Madhogunge, Bangermow, Oonao and Behar.

(VII.)—Sultanpore to Cawnpore *viâ* Gowreegunge, Jais, Roy Bareilly and Behar.

(VIII.)—Futtehghur to Nanpara *viâ* Hurdui, Seetapore and Mullapore.

(IX.)—Mohomdee to the Ganges *viâ* Pusgawan, Pehlanee, Hurdui and Belgram.

(X.)—Luckhimpore to Shajehanpore *viâ* Mohomdee.

13. This is a new road in course of construction. It lies entirely within the Baraitch Division, and the sums marginally noted have been assigned for it during this year. The Local Committee propose to construct the road only as far as Nawabgunge, opposite Fyzabad, but the Officiating Chief Commissioner desires it may be continued to Belwah Bazar in the Goruckpore District. It is hoped that larger sums may be assigned to this road next year.

Baraitch to Belwah Bazar *viâ* Secrora.

	Rs.
Baraitch Road	640
Gonda	255
Total Rs.	895

14. A sum of 15,000 rupees has been given as a grant-in-aid to that section of this road which lies between Nanpara and Byram Ghat. It is believed that this portion of the road is well advanced towards completion. The sums noted have been assigned to it.

Nanpara to Roy Bareilly.

	Rs.
Grant-in-aid	15,000
Baraitch Local Funds	5,305
Total Rs.	20,305

The section from Byram Ghat on the Gogra to Nyapoora Ghat on the Goomtee lies within the Durriabad District. The sum of 7,389 rupees has been allotted for this road, as marginally shown by the Durriabad Committee.

	Rs.	a.	p.
Road	2,052	2	4
Bridges	5,389	–	–
Total Rs.	7,441	2	4

From Nyapoora Ghat to Roy Bareilly, the road traverses the districts of Sultanpore and Roy Bareilly. The approach to the Ghat on the south side of the river is described as full of ravines and otherwise difficult of construction. The Officiating Chief Commissioner has desired that it may be left alone for the present. He will be glad to be informed whether it has been surveyed in accordance with the instructions contained in my No. 297, dated 26 April 1861, to the address of the Commissioner of Baiswarra. The sums marginally noted have been allotted to this section of the road.

See paragraph 15 of No. 897, dated 15th November 1861, to Commissioner of Baiswarra.

	Rs.
Sultanpore	2,000
Bareilly	700
Total Rs.	2,700

15. The portion of this road lying within this province is within the Fyzabad District, and the Committee attach great importance to its early completion. They have granted the sums marginally noted for this purpose.

Fyzabab to Azimghur *viâ* Tanda.

	Rs.	a.	p.
Road	2,769	12	–
Bridges	4,500	–	–
Total Rs.	7,269	12	–

16. This road also belongs to the Fyzabad District. It is said to be a very important commercial line, connecting Tanda with Mirzapore.

Tanda to Jounpore *viâ* Jelalpore.

	Rs.
Road	1,200
Bridges	4,000
Total Rs.	5,200

17. This line traverses the Fyzabad, Sultanpore, Pertabghur and Roy Bareilly Districts, and connects Tanda on the Gogra with Dalamow on the Ganges opposite the Futtehpore Railway Station; considerable sums have been assigned for the construction of this road by the several Committees, as marginally shown.

Tanda to Dalamow Ghat *viâ* Sultanpore, &c.

	Rs.	Rs.
Fyzabad Road	2,460	
Bridges	760	
		3,210
Sultanpore Road D.	850	
Road I.	500	
		1,350
Pertabghur Road I.	750	
Road N.	481	
		1,231
Roy Bareilly Road N.		200
Total Rs.		5,991

The road may be divided into the following sections:—1st, Tanda to Sultanpore; 2d, Sultanpore to Amethee, forming part of Road D. in the Baiswarra divisional Budget; 3d, Amethee to Salone, corresponding with Road I. in the same statement; and 4th, Salone to Dalamow Road N.

18. The first section of this road, from Shajehanpore to Shahabad, corresponds with the last section of Provincial Road No. 7. The second section from Shahabad to Sandee lies in the Hurdui District. It is proposed to construct one bridge on this line at the Heerapore Nullah, and 2,487* rupees have been devoted for the construction of the road.

Shajehanpore to Dalamow Ghat *viâ* Shahabad, Sandee, &c.

* Unexpected sanction of 1859-60.

The third section, from Sandee to Mullaon *viâ* Belgram, should be carried through the important mart of Madhogunge, the direct road from Belgram to Mullaon being given up.

The fourth section is from Mullaon to Oonao. The small portion lying between Mullaon and the large village of Moradabad has not been constructed, although a sum of 3,000 rupees has been set apart for the construction of a bridge on the borders of the

Districts of Hurdui and Oonao, payable in moieties by each, and a further sum of 615 rupees for a bridge across the canal in the Oonao District. The road must be constructed at once. A sum of 3,460 rupees, exclusive of the above, has also been assigned to this road by the Oonao Committee. The last section is between Oonao and Dalamow. For this the Oonao Committee has assigned 466 rupees, but nothing has been allotted to it in Roy Bareilly.

Saltanpore to Cawnpore *vid* Guneshgunge, Jais and Roy Bareilly.

	Rs.
Saltanpore Road G. - -	3,000
Roy Bareilly - - -	1,000
Total - - - Rs.	4,000

19. The first section of this road corresponds with Road G. of the Baiswarra divisional statement. The sums marginally noted have been allotted to it.

The second section from Roy Bareilly to Behar is Road H., and on this section the large sum of 9,435 rupees has been allotted. From Behar to Oonao the road follows the last section of the preceding road from Oonao to Dalamow.

Futtehghur to Nanpara *vid* Hurdui, Seetapore and Mullapore.

* Unexpected sanction of 1859-60.

20. The first section is from Futtehghur to Hurdui. A direct road between these places is being constructed at a cost of 2,423* rupees, and 4,400 rupees for bridges.

The second section connects Hurdui with Seetapore. A sum of 423 rupees has been assigned for clearing that portion of the road situated within the Hurdui District, and 1,000 rupees was proposed to be spent on the construction of a bridge on the Hurhurpore Nullah; but this last has not been sanctioned, as the Commissioner thought it unnecessary at present. A bridge over a Jheel at Bhynouree will be completed at a cost of 1,500 rupees, of which 967 rupees will be expended this year. In Seetapore 460 rupees has been assigned for the repairs of this road, and 41 rupees for a bridge.

	Rs.
Unexpected sanction of 1859-60 -	103
Sanction for 1861-62 - -	320
Total - - - Rs.	423

The third section, from Seetapore to Mullapore, is incomplete. A road at present extends as far as Lahurpore, and one is projected from Luckhimpore to Mullapore, which will probably cross the Chouka River at a place marked on the map as Purbutpore. The line from Seetapore to Lahurpore should be extended so as to join this road at Purbutpore, or any other convenient spot. No time should be lost in marking out and selecting the best line for this road.

The last section, from Mullapore to Nanpara, lies within the Baraitch District; although no mention is made of this road in the Baraitch Budget, yet the Officiating Chief Commissioner observes that an assignment is made for a road from Chelaree Ghat to Nanpara *vid* Seopore, and he believes that this road could easily be connected with the Ghat opposite Mullapore. The Commissioner of Baraitch is requested to report on this point.

Mohomdee *to* the Ganges *vid* Pusgawan, Pehlanee, Hurdui and Belgram.

21. The first section of this road, from Mohomdee to Pehlanee, is not yet laid out. It should be surveyed and marked out at once, and as soon as the trial line has been approved by the Deputy Commissioner, land for its construction should be taken up.

From Pehlanee to Hurdui a road has been made, and 382 rupees have been assigned for clearing and repairing it.

From Hurdui to the river a road has been made as far as Belgram, but it must be continued to the river. A sum of 604 rupees has been set apart for the repairs of this section, and 3,306 rupees have been sanctioned for bridges. A further sum of 1,393 rupees for a bridge is in abeyance, pending further report.

22. As regards district roads, it will be sufficient to give a list of them as far as they are known, marking with a cross those to which the Officiating Chief Commissioner attaches most importance. They will be shown on the map by lines and dots, thus —·—·—·—. The names of these roads and the sums set apart by the Road and Ferry Fund Committees for expenditure on them is given in the accompanying Statement.

(signed) *C. Currie,*
Secretary to Chief Commissioner.

APPENDIX U (2).

Circular No. C.—1123 of 1862.

Regular Suits—Revenue Side.

From the Secretary to Chief Commissioner, Oudh, to the Commissioner, Division; dated Lucknow, 16 April 1862.

Sir,

I HAVE the honour, by desire of the Officiating Chief Commissioner, to forward for your information and guidance the following instructions regarding the constitution, jurisdiction and procedure of the Revenue Courts in the disposal of suits of a civil nature. The circulars marginally noted * having been embodied in these instructions, may be considered cancelled. Revenue.

2. On the annexation of the province, his Excellency the Governor General in Council, in laying down rules for its administration, directed that the principle found so beneficial in the Punjab, of entirely excluding from the jurisdiction of the Civil Courts all claims to proprietary and accessary rights in land, and of withdrawing that power of revision which in the regulation provinces, and in the first instance in the Punjab also had been reserved to those courts, should be unquestionably and from the first adopted in Oudh. Thus the duty of investigating and judicially deciding all such claims, was held to appertain to the revenue authorities exclusively, that is to say, to the settlement officer (his decision being open to appeal to his superiors in the Revenue Department) wherever the case might admit of delay, or be of so peculiar and intricate a character as to admit of being satisfactorily dealt with by that officer only, and to the Deputy Commissioner as a revenue officer, in those cases in which a final order could be clearly given, without prejudice to the general interests of the village, and in which hardship and injustice to individual claimants would evidently be entailed by delay.

3. The

* 119-2917 of 13 August 1860.
120-2918 of 13 August 1860.
166-3410 of 1 October 1860.
197-4268 of 17 December 1860.
3-90 of 7 January 1861.
18-591 of 21 February 1861.
25-764 of 5 March 1861.
29-952 of 18 March 1861.
55-2359 of 16 July 1861.
63-2564 of 5 August 1861.
57-2395 of 19 July 1861.
17-3000 of 13 September 1861.
Paragraph 7, Circular No. 47-2096 of 24 June 1861.

3. The above orders have, by a late Act of Parliament, been declared to have the force of an act of the Governor General of India in Council. All claims to proprietary and accessary rights in land are then the suits of which (*see* Section 1, Act VIII. of 1859) the Civil Courts in Oudh are barred from taking cognizance by an act of the Governor General in Council, and no decisions passed by the Revenue Courts on such claims can be revised or called in question in the Civil Courts.

4. The suits which, under the above rules, are cognizable by the Revenue Courts exclusively, may be classified as follows:—

(I).—Claims to a proprietary right in land.
(II).—Claims to a sub-proprietary right in land.
(III).—Claims for redemption of mortgage of landed property.
(IV).—Claims to succession in landed property by inheritance.
(V).—Claims for participation in the profits of estates.
(VI).—Claims for possession of groves, or right to the produce of groves between two persons of equal interests.
(VII).—Claims for recovery of rents of former years.

5. When the regular settlement is in progress in a district, all claims of classes I., II. and III. must be referred to the settlement officer. The ordinary Revenue Courts are interdicted from taking them up.

6. In a district in which the regular settlement has not commenced, these suits may be heard by the Revenue Courts, provided that the party suing has been dispossessed of the rights to which he lays claim, subsequent to the summary settlement of 1858–59.

7. But even in this case a discretion is left to the Deputy Commissioner and Commissioner to decide whether the claim is one that calls for immediate trial, or can be allowed to lie over till the regular settlement.

8. It is to be understood as the leading principle that all cases which are of a peculiar or intricate character, or in which a final order cannot be passed without probable injury to the rights of others, or generally in which no hardship or injustice will be entailed by delay, shall be left to the settlement officer to dispose of. A copy of the order referring the petitioners to the regular settlement should always be given to them, and the period of limitation will be computed back from the date of the petition.

9. The settlement with the talookdars being final so far as their right to engage for the estates settled with them is concerned, has swept away a multitude of claims; but still many are preferred for fractional interests in zemindary mehals, maafee or malgoozaree, or for redemption of mortgage, which it is believed do not call for immediate decision.

It is necessary to give more detailed instructions regarding each class of case.

(I).—Claims to a proprietary right in land.

10. These may be sub-divided as follows:—

(A).—Claims to possession of a village or fractional portion of a village, khalsa or maafee.
(B).—Claims to specific lands.

11. Wherever settlement operations have commenced, suits of the above nature are cognizable by the settlement officer only, and are exempt from stamp duty under the provisions of the general exemptions of Schedule B. of Act X. of 1862. If preferred in a district in which settlement operations have not commenced, the petitions must be written on stamp paper, of the value prescribed for petitions of plaint in Clause 11, Schedule B. of the said Act. Should it be decided that the claim is not one that calls for immediate decision, and the petitioner is referred to the regular settlement, the Deputy Commissioner may, with the sanction of the Commissioner, refund the value of the stamp duty paid on the plaint, provided no appeal has been preferred to a superior Court against the original decision.

12. As regards claims to possession of a village, or fractional portion of a village, preferred in districts in which settlement operations have not commenced, it must be borne in mind that such claims can only be preferred by persons recorded in the khewut; and that if a man was in possession of his share when the khewut was drawn up and has since been deprived of it, he will be entitled to demand that his possession be maintained according to that record. But if he was not in possession when the khewut was drawn up, his claim cannot be heard now, because in that case the khewut, which professes to be merely a record of possession was incorrect, and is of no validity. The maintenance of possession till the regular settlement, in accordance with khewuts prepared at the summary settlement, will not bar the settlement officer from judicially determining the right of opposing claimants, as against that of the parties whose possession has been temporarily maintained.

12 *a*. As regards rent-free tenures the Chief Commissioner is of opinion, that as the grant of a jagheer in Oudh generally carries with it a proprietary right in the soil when a holding

a holding is released in favour of one or more maafeedars, the Government simply consents to waive its claim to the payment of land revenue on the holding in perpetuity, or for the life or lives of one or more persons specified. This act on the part of Government can in no way affect the proprietary rights in the soil existing at the time of agreement, and those rights must be maintained in their integrity. When then a holding is released for the joint lives of two or more persons, the heirs of each will succeed to all the rights enjoyed by their ancestor, and will be exempt from the payment of land revenue until the decease of the surviving maafeedar, in whose favour the grant was originally made. All claims to a participation in rent-free holdings must be heard as regular suits, revenue side, and judicially decided. Should it be ascertained in the course of such investigations that the grant in dispute has been released in favour of certain persons, under a misapprehension of the true facts of the case, it will be open to Government to reconsider the question of the validity of the grant, and to determine whether it shall be released at all or not.

13. Claims to specific lands in co-parcenary villages should not be taken up in any shape during the present settlement, because, if the claim is decreed, it is impossible to execute it without trenching on the rights of others. Khewuts have been prepared for co-parcenary villages, as far as they can be prepared prior to a khusrah survey, and must be accepted; no claims to be recorded as proprietors in villages, the khewuts of which already exist should be heard. Persons preferring such claims should be referred to the regular settlement.

14. There are, however, claims to specific lands which require to be carefully dealt with, viz. lands declared or claimed as nuzzool. In districts in which settlement operations have commenced, the proprietary right in all patches of land, commonly considered Government property, should be investigated and judicially decided by the Settlement Officer, and a list of all such patches of land as may finally be declared to be Government property, should be prepared and retained in the Deputy Commissioner's office.

15. In districts in which settlement operations have not yet commenced, a list of all nuzzool property should be prepared and claims preferred by individuals, should be heard as "regular suits, revenue side," and should, after due investigation, be judicially decided. Such claims should not be summarily dismissed, on the ground that the property claimed has been declared nuzzool, because, in the great majority of cases, such declaration has been made, may be, by the Chief Commissioner on insufficient data, without full investigation.

(II).—Claims to a sub-proprietary in land.

16. Such claims are not generally directly preferred except before a Settlement Officer. When they are directly preferred prior to the commencement of the regular settlement in a district, they must be written on stamp paper, of the value prescribed for petitions of plaint in Clause 11, Schedule B. of Act X. of 1862. They must be heard by Deputy Commissioners only, and must be decided in accordance with the instructions issued for the guidance of settlement officers, such decisions being final, subject only to appeal in due course.

17. It is in summary suits, and suits for the adjustment of rent-rates, that the issue of a sub-proprietary right is generally raised in a district in which settlement operations are not in progress. In disposing of such claims, however indirectly raised, district officers must be guided by the instructions issued to settlement officers. It will be borne in mind, however, that such decisions in miscellaneous cases are to hold good only for the term of the summary settlement, and will not be binding on the settlement officer.

(III).—Claims to redemption of mortgages of landed property.

18. These are of two kinds:—

(A).—Claims by mortgagers who never gained possession of the land mortgaged to recover the money advanced on the mortgaged land.
(B).—Claims by mortgagees to recover possession.

19. It has been determined to be a just and sound principle, to treat as money debts claims by mortgagees who never gained possession of the land mortgaged to recover the money advanced on the mortgaged bond. These are, therefore, common Civil suits, and cognizable as such by the Civil Courts. Circular, No. 120, dated 13 August 1860.

20. Claims by mortgagers to recover possession may be preferred on plain paper if presented to a settlement officer, pending the formation of a settlement; in all other cases stamp paper of the value prescribed for petitions of plaint must be used.

21. Such claims against talookdars are barred by the Governor General's order confirming the settlement made with them.

22. The following Rules have been issued regarding the period of limitation to the hearing of such suits:

23. When no term has been fixed in the deed for the duration of the mortgage the period of limitation will be that laid down in Clause 12, Section 1 of Act XIV. of 1859,

for suits for the recovery of immovable property, viz. 12 years, reckoning from the date of delivery of possession to the mortgagee. But if a term has been fixed in the deed within which the mortgagee can redeem, that will be the period of limitation. Thus, if the term was only six years, and it has expired, no suit for redemption will lie. But if the term was 30 years, the suit can be brought at any time within that period. In most mortgages in Oudh, however, no term is specified, and to suits for redemption of them the 12 years' limitation Rule will apply.

24. Should it be a condition of the mortgage deed that the mortgager re-enter on the expiration of a certain period, and the mortgagee has nevertheless kept possession, then the cause of action will arise from the date of the expiration of that period, and the 12 years' limitation Rule will reckon from thence.

25. It is by no means imperatively necessary to take up every claim to redemption of mortgage during the currency of the summary settlement. The instructions contained in paragraph 8 of this circular are to be applied to such claims. It will, of course, be understood that should a mortgager and mortgagee appear in court and express a desire to revert to former possession, the Deputy Commissioner will give effect to their wishes.

(IV).—Claims of succession to landed property by inheritance.

26. District officers will not interfere, on the death of a talookdar or other landed proprietor as to the succession, except when such interference is unavoidable, in order to prevent fights or almost certain injury to the property, real or personal. There will almost always be some generally acknowledged heir who will quietly succeed. When this is not the case, the Deputy Commissioner will take such steps as he may deem best adapted for the temporary security of the property, either upholding the party in possession, or determining summarily the right to possession, and delivering possession accordingly, or appointing a curator to collect the rents, and placing the personalities in charge of any unobjectionable member or members of the family or other respectable persons. Immediately on proceeding to take these measures, the Deputy Commissioner must report his intentions to the Commissioner with his reasons, and must again inform that officer when his arrangements are completed. The Commissioner will, of course, confirm, modify, or set aside the Deputy Commissioner's order, as he may deem proper.

27. When succession has been quietly effected, or when a temporary arrangement, as above explained, has been made, all claims must be preferred to the Deputy Commissioner on stamp paper of the value prescribed for petitions of plaint in Clause 11, Schedule B., Act X. of 1862. The decision of such claims should be deferred till the Bill lately introduced into the Legislative Council, and bearing on this subject, has been passed and become law.

28. In paragraph 16 of this Circular it has been ruled that claims to a sub-proprietary right in land directly preferred in a district in which settlement operations have not commenced are to be heard by Deputy Commissioners only. Similarly all claims to succession in talookas, *i. e.*, estates the proprietors of which have received a sunnud, must be heard by Deputy Commissioners only. All other suits of the four classes heretofore detailed may be heard by Deputy Commissioners or Assisstants with full powers. In suits involving claims to succession in talookas, a copy of the decision will be forwarded at once to the Chief Commissioner through the Commissioner. This latter officer may, in the event of no appeal being preferred, and it seeming necessary to do so, make any further inquiry personally or through the district officer, and in forwarding the papers to the Chief Commissioner will enter fully into all matters which the Deputy Commissioner may not have thoroughly explained, or on which he may disagree with him, and will distinctly record his own opinion.

(V).—Claims for participation in the profits of the estates.

29. In the older provinces the action of the revenue courts is confined to the enforcement of a rendition of accounts; but in this province, where judicial and fiscal functions are united in one and the same officer, there is no reason why an order for the rendition of accounts should not be accompanied by a decree adjudging the amount due according to the accounts so rendered. Claims for participation in the profits of estates and claims for rendition of accounts will be held synonymous. They will be cognizable only when preferred by persons recorded in the khewut, and if brought to recover dues of the preceding year, will be heard as summary suits; but if of former years, as regular suits, revenue side. In the latter case the petitions must be written on stamp paper of the value prescribed for petitions of plaint, and may be heard by any officer vested with full or special powers. Claims against agents will be treated in the same manner as claims against a lumberdar.

(VI).—Claims to possession of groves or right to the produce of groves between two persons of equal interests.

30. These have been variously treated as regular suits for rights in land and as cases of ouster. Under the Native Government permission to plant groves was freely given by the landlord to Brahmins, Bunyahs, and other persons possessed of no proprietory interest in

in the soil. The claims now preferred arise either from the possession of the grove, or the right to the produce being contested between two persons of equal interests, or from the attempt of the zemindar, who is owner of soil on which the trees stand, to take rent from or eject the occupant of the grove.

31. If the claim is of the former character, it should be heard as a regular suit, revenue side; stamp paper of the value prescribed for petitions of plaint must be used; such cases may be heard by any officer vested with special powers.

32. If the suit arises from an attempt of the zemindar to take rent from or eject the occupant of the grove, it must be treated as a summary suit between landlord and tenant. The zemindar has an undoubted right to demand rent for the land, for the trees are generally a source of income, and if not, the land might be made so; but if the owner of the grove is willing to agree to a fair rent, he should not be ejected from possession.

33. In either case the Deputy Commissioner can, if he thinks necessary, put one party in possession pending the settlement of the claim.

(VII.)—Claims for recovery of rents of former years.

34. Such claims require no specific instructions. They must be preferred on stamp paper of the value prescribed for petitions of plaint, and may be heard by tehsildars within the limits of their jurisdiction in purely civil suits, viz. 100 rupees.

35. The practice of referring suits of any of the classes mentioned in this circular to tehsildars for inquiry, and deciding the case chiefly on their report, is irregular and strictly interdicted.

36. The Rules of Procedure prescribed by Act VIII. of 1859 for civil courts will be followed in the trial of regular suits, revenue side. The evidence in such suits as well as the decision will be recorded in English whenever the investigation is conducted by an European officer. The same rate of fee for the issue of processes as has been prescribed by the Judicial Commissioner for civil suits will be exacted. The deciding officer will, in writing his decision after giving the names of the parties and the subject of the suit, state the value of the suit and of the stamp on which the suit was admitted, and briefly note the mode in which the value was calculated.*

* *Vide* Notes, Clause 11, Schedule B., Act X. of 1862.

37. Copies of decrees and judgments in regular suits, revenue side, are exempt from stamp duty wherever the value of the suit is less than 50 rupees under the exemption in Clause 5, Schedule B., Act X. of 1862.

38. Regular suits, revenue side, cannot be admitted for the purpose of setting aside summary decrees. Persons dissatisfied with the decision of any officer in the summary suit Court, can appeal as a right up to the Commissioner, whose decision will be final, the Chief Commissioner retaining to himself the power of admitting an appeal from the Commissioner's decision on a point of law, but not of facts.

39. Cases of the several classes enumerated in this circular will, when heard by the district courts, be included in the business statement under heading 48 A., regular suits, revenue side. A memorandum should be added at the foot of the statement showing the number of each class of case disposed of during the period for which the statement is prepared.

(signed) *C. Currie,*
Secretary to Chief Commissioner of Oudh.

(No. 103.)

From Lieutenant Colonel *L. Barrow,* C. B., Officiating Inspector General of Police in Oudh, to *C. Currie,* Esq., Secretary to Chief Commissioner of Oudh, dated Lucknow, 10 April 1862.

Sir,

I HAVE the honour to submit, for the Chief Commissioner's perusal, the annual reports of the district superintendents of police, and to offer some observations on the police administration of the past year. The Returns † that accompany this Report will show the working of the police, and some improvement as compared with the previous year.

† A. B. C. D. of Appendix.

2. From cognizable and non-cognizable crimes having been mixed up under the heading "Other Miscellaneous Crimes" for 1860, those offences have been omitted in the Comparative Return A; but exclusive of these, during the present year, there have been reported to the police 16,986 offences to 12,604 in the previous year; and deducting those

Cases reported and dealt with in 1860-61.

CHAP. XV. Oudh.

in which plaintiffs did not desire to prosecute, 8,450 cases were dealt with in 1861 to 6,114 in 1860; the general results for the two years are as follows: *—

* *Vide* Appendix A.

	Number of Cases in which Complaint was made.	Persons Apprehended.	Acquitted.	Convicted.	Per-centage of Acquittals to Apprehensions.	Per-centage of Convictions.	Transferred, Escaped, or Died, or Remaining.
1860 -	6,144	9,157	3,540	5,331	38·65	58·21	3·11
1861 -	8,450	9,329	3,254	5,702	34·68	61·12	3·80

The acquittals, it must be observed, include not only those tried and acquitted, but those arrested and released without trial.

Value of Property stolen and recovered.

3. The value of property stolen is entered according to reports made at police stations, and is no doubt considerably exaggerated. The amount recovered is, therefore, not a fair proportion to what is actually stolen, but it is impossible to say what per-centage this bears to the reported amount. The reported value is 3,88,853; this to 3,66,244 last year; 52,246 rupees worth being recovered in one year, and 50,020 rupees in the other.

Increase and decrease of crimes in 1860-61.

4. "Thefts by housebreaking or house-trespass" is the crime that shows the largest increase during the year. "Cattle thefts" are rather more, and "ordinary thefts" slightly less; but the change in nomenclature of crime has something to do with these variations. In heinous crimes there are 134 murders and attempts—this to 130 last year, and 59 culpable homicide to 43. In "grievous hurt" and "rioting" there is a great decrease of crime, and it is matter of congratulation that an offence which was so common in this province, ordinarily caused by violent land disputes, has so much diminished. "Robbery" and "dacoity" are also both on the decrease, the proportions for the two years being 29 so 24 of "dacoity," 76 to 44 of "robbery with hurt," and 184 to 87 of "ordinary robbery." Rapes have increased from 36 to 60, whilst then some heinous offences show a decrease. On the whole there has been an increase of crime reported, and it has been more successfully dealt with.

Enquiry by police in theft cases. *Vide* Appendix A.

5. It will be noted that there are a large proportion of thefts in both years, which were not taken up in consequence of plaintiff not appearing; and in 1861 the number of burglaries and thefts not taken up on this account increased by more than 2,000, being 8,529 for that year to 6,447 in 1860; this arises from the rule having been more strictly enforced, that the police shall not interfere in such cases when unattended with personal violence, unless on application from the party who suffers. I would here observe that Clause 2, Section 2, Regulation 2 of 1832, inhibits inquiry by the police, in cases in which no written application is received; but this law is one of those about to be repealed by a Bill now before the Legislative Council. The rule then for police not to interfere when plaintiffs do not seek inquiry will become a special one, for there is nothing in Act XXV. that prohibits such investigation being made by the police after a theft is once reported. I merely desire to note that the law is not quite clear on this point, for by Section 135 the enquiry is compulsory, and the provisions of Section 136 scarcely relieves the police from taking up a case if reported; but if any other interpretation than the present one was placed on these sections by judicial officers, officers in charge of police stations would never be at rest nor the people either, and a further consequence would be a most extensive concealment of crime.

Working of the police.

6. The four first returns in the Appendix will show more particularly the working of the police for the past year. The Table B. gives the per-centage of cases and persons convicted in the nine most heinous classes of offences. Out of 575 cases reported, in 474 of them apprehensions followed, and 443 were tried, in 321 of which there were convictions; the apprehensions were more numerous than they will be again I hope; for 1,269 persons were arrested, of whom 770 only were convicted, or 60·67 per cent. to the number tried. Dacoity and highway robbery have not been successfully prosecuted; there are always a large number of arrests in these cases; the average of persons convicted is consequently bad. The police are prohibited from taking up charges of rape, except on complaint of relations of nearest degree; but the charge still appears to be frequently made on slight grounds; for of 59 persons tried for this crime, 31 were convicted and 28 acquitted. In other crimes the return shows a fair average of success.

Annual Abstract of Crimes. Appendix C.

7. The Annual Abstract of Crime exhibits the whole of the cognizable cases (17,647) reported to, or taken up, by the police during the year. Non-cognizable crimes are not now included in the Return as complainants are referred to the magistrate; the police, however, perform the work of process-servers in such cases, but only act under the magistrate's order. There is a most distinct ruling as to the crimes police can deal with on their own motion, and the Criminal Procedure Code, Act XXV. of 1861, has been strictly acted up to during the past year under the provisions of the preliminary Act XIII.

8. In

8. In cases taken up by the police, the four quarters of the year exhibit a gradual improvement in the per-centage of cases brought to trial as follows:— Per-centage of cases brought to trial.

		Per cent.
Quarter ending 31st March	1861	55
„ 30th June	„	55·43
„ 30th September	„	61·98
„ 31st December	„	62·74

9. The per-centage of cases and persons convicted for the four quarters is— Per-centage of cases and persons convicted.

		Cases.	Persons.
Quarter ending 31st March	1861	65·36	57·26
„ 30th June	„	77·47	68·06
„ 30th September	„	78·61	63·52
„ 31st December	„	77·58	66·01
Total for year	„	74·83	63·88
For 1860, it was		0	58·21

10. The Return D. will show the average work of each district, but I would not condemn those showing indifferent per-centages. Average work of each district.

The duration* of cases before the police I believe to be satisfactory, and that work is really very expeditiously disposed of; if it were not so I think complaints would have reached me from the Judicial Department; but from the reports there would appear to be no fault found on this score; and as regards the detention of prisoners only for 24 hours by the police, the rule is rigidly enforced, and no inconvenience whatever has arisen from the old period of detention being shortened. The per-centage of convictions on evidence, first adduced by the police is in many districts very satisfactory, and it is a point in which the police will improve; eventually very few cases, it is hoped, will go up with insufficient evidence. The European officers have been enjoined to check any tendency there may be on the part of the police to keep back evidence in favour of defendants, and the instances are, I trust, of the rarest in which prosecutions are not *bonâ fide*; had there been a contrary tendency, I think such a delinquency should have been brought especially to notice, but during the whole year no such report has reached; and as the District Superintendent chullans every case in English, the evil can hardly exist in reality.

* *Vide* Appendix D.

11. In the report of convictions and acquittals, I am dependent on returns that reach me from police officers, which necessarily differ in many respects from the magistrate's returns; for until the last quarter of the year, when orders were issued in Chief Commissioner's letter, No. 1,421, many cognizable cases were taken up by magistrates without any intervention of the police of which we know nothing. The result of committed cases also are not reported to us, so that these returns will bear no comparison with any judicial ones without a chapter of explanations. It would appear advisable for the future that the police returns should end with the report of crimes and apprehensions made by them, and that the magistrates should begin with the convictions and acquittals, the results being reported to this department by Deputy Commissioners. Convictions and acquittals.

12. An examination of the Returns shows a preponderance of crime in no particular district, according to what is reported,† excepting perhaps Fyzabad, which is, however, a large district. Roy Bareilly and Luckhimpore have always been light in crime, the latter so much so as to have called for investigation, but there appears no reason to believe that it was concealed there, more than elsewhere; the land disputes which are generally those under the headings "Aggravated Assault" and "Rioting" have much decreased, particularly in Fyzaban and Sultanpore, the two districts in which these offences were very prevalent Crime in districts.

prevalent the previous year.* The returns give a large increase in the reports of different kinds of theft; but beyond this no district has a speciality for any particular crime except Oonao, which still shows a large number of murders † than any other, whilst it is pretty free from other heinous crimes. In previous years and up to May 1861 these murders were effected by strangulation in a particular portion of the district. A force of extra police was therefore located on the spot; and since June last this crime has taken a new form—that of poisoning or drugging for the sake of robbery, and has been committed in different parts of the district; only one of the poisoned men died in these cases. It would appear, therefore, that death is not the object of these robbers.

Strangulation and poisoning cases.

‡ Appendix E.

13. These strangulation and poisoning cases are both described in an Appendix ‡ of this Report, and in special reports to the Chief Commissioner. The measures taken to put them down are also given in the Appendix; our best police officers have been in turn employed on the spot; and during the year the Thuggee Department, with their superintendant, investigated some cases without success; the Commissioner also, with a separate agency, attempted without avail to unravel the mystery; and the civil officers of the district paid much attention to the subject, giving the police all the aid in their power. The perpetrators, who no doubt came from the other side of the Ganges, invariably attack travellers, and the dead bodies of those killed by strangulation have not been recognized. This renders discovery extremely difficult.

14. One murder by strangulation, which was committed by our own agents with a view to secure reward by fixing the crime on certain budmashes of the district, was cleverly discovered by the police, and one constable and two informers were hanged for the offence.

15. Oonao is the great thoroughfare into Oudh; and although murders by poison have been more frequent in the North Western Provinces and Punjab than even here, they have not extended to our other districts, except Lucknow, where a few cases of robbery by poison have occurred. In the former province a special officer is, I believe, investigating these cases, and in the latter one man appears lately to have confessed to no less than 19 murders by poison. Murder by strangulation has, I trust, ceased for good, and the poison cases have latterly been mostly unsuccessful attempts, or more probably merely cases of drugs being administered for the sake of robbery, and not with the intention of producing death. I trust, therefore, under the arrangements now made, there will be an end to them also. The map that accompanies the Appendix will show how the murders were first confined to a particular spot.

Extinction of rebels.

16. The year under report has seen the extinction of the last remnant of the rebel sepoys who took refuge in the jungles in this province. On the Gonda and Goruckpore boundaries there is an extensive belt of jungle in which, as far back as 1859, several rebel sepoys took refuge; the police have more than once been in conflict with them, and five posts were kept up in order to watch the jungles, but have now been discontinued, the two last of the rebels having, one been shot, and the other transported; the civil authorities had, however, to put great pressure on the landowners before this desirable result was attained; such a dread had these sepoys established that the people were afraid to act in concert with the police against them.

Forgery cases of Gonda.

17. In Gonda also a very extensive forgery was discovered and ably prosecuted; as many as 48 forged seals were found, both of our own and the old Goverment kutcherries; this case was reported in letter No. 389, dated 26 November last.

Heavy crimes.

18. It would be recapitulation to detail the various heavy crimes in which the police have acted, as they appear in the judicial reports; and, excepting the more frequent murders in the Oonao district, there has indeed been no organized crime in the province to deal with; such crimes as have been committed neither in number nor atrocity are in any way in excess of the ordinary state of things.

Lucknow city.

19. During the year the city police has been unavoidably subject to many changes of superintendents; but the organization has, I am sure, been improved, although there has been a reduction of annual expenditure from 92,244 rupees to 77,844 rupees.

20. The mounted constables have been entirely done away with. The system of "patrols," which had been under trial, was discontinued, and "beats" again established. The police posts have been, in the latter part of the year, much more scattered; and I think Mr. Blenman's remarks on the present system and working of the Lucknow police deserves attention. Dacoity, or *what is called such*, in the city is well described in the superintendent's report. In the 10 cases which occurred during the year none of that violence designated the crime that the title would import; it became dacoity from the number engaged and from arms being carried, but no marked violence ensued. The police failed in putting a stop to these dacoities until the last months of the year, when a clue was discovered to the gang; and since their prosecution, though no conviction ensued, the crime has ceased, and indeed for some months heavy burglaries have so also.

21. The

21. The Returns for the four quarters show a gradual decrease of crime—

Of the above—

852 cases were tried and 658 cases were convicted,
1,263 persons tried and 840 persons convicted.

These returns, if indifferent, are not so remarkably so as to call for much comment or stricture.

22. There is a good deal of miscellaneous work required from the Lucknow city police, which would appear to be more properly a tehseeldar's work.

The superintendent details 395 cases of this kind, which have occupied much of his time. Police interference in many of them was undesirable, but the city magistrate would appear to be hampered for means otherwise to dispose of such cases.

23. The following are the heavy crimes in the city during the past year, the result of which is shown in the city annual report:—

Murders	10
Dacoity	10
Robbery with hurt	2
Robbery	2
Coining	5

24. The mode of making and uttering false coin is described in the Report. Since the close of the year some offenders have been successfully prosecuted for this crime. Altogether the city during the year has been very well conducted, there has been but a single case of "riot," and but very few of "aggravated assaults," which speaks well for a large city not accustomed in past years to much law or restraint.

Accidents.

25. The Return which accompanies Appendix F. shows 3,361 persons killed by various accidental causes, and 316 injured; the deaths by falling into wells, &c. (1,660), attract notice. The police under the magistrate's orders see that wells are covered in, and punchayets are assembled on occasions of death, but no suspicion appears to have attached to this class of cases, nor have the police investigations been commented on. I have therefore abstained from directing further interference; but the number of accidental deaths calls, I think, for the magistrate's attention.

Arms.

26. The arms taken during the year are few in number, comparatively speaking (3,588 of sorts); under the new law no officer can search except under the warrant. In cases of dacoity and in searching houses for other stolen property, arms are constantly found concealed; this is the only indication we have that the search in 1858-59-60 did not quite clear the country of weapons.

Strength of Oudh police. *Vide* Appendix G.

27. The Oudh police on the 31st December 1860, and on the same date in 1861, shows a considerable reduction in number and cost:—

	Number of Men.	Cost.
		Rs.
December 1860	9,218	15,99,200
December 1861	8,253	13,29,324
Decrease - - - *Rs.*		2,69,876

This reduction was in a measure effected by putting a stop to recruiting, and partly by gratuities; the efficiency of the force has suffered in no way by the reduced numbers. Magistrates object to the mofussil police being decreased; but to effect further reduction Deputy Commissioners must yet give up some stations. I am convinced that the work may be equally well done with fewer posts and fewer men, particularly when the jurisdiction of the different stations is properly rectified, and this work has been put in hand.

Police expenditure.

28. Under the present budget system, the expenditure shown under the head police for next year is 11,72,898 rupees, the remainder being chargeable to revenue, judicial and gaol, as per Return H. This might be reduced to 10½ lacs; but it will require some care and

CHAP. XV. Oudh.

and consideration to effect, as it will be observed by the district officers' reports that the constant large reductions in the force has, in their opinion, caused much discontent and distrust. This feeling is, however, I am of opinion, only temporary, and everything tends to show that police service is still extremely popular with all grades. I should wish, however, that a limit was at once fixed to our police expenditure; and having reduced it to that, there would be an end of the matter. For a population of eight millions and 28,000 square miles, 11½ lacs of rupees does not appear excessive. By a studied economy, however, the force might perhaps be reduced to 10½ lacs, and for the present, with this view, recruiting has been again stopped.

Reductions and changes.

29. Besides reductions some effective changes have been made in the constitution of the force; there have been some modifications in the grades of European officers, with a slight decrease in the amount expended on that agency, as shown in the Return G.; the native commandants, soobadars and jemadars, a portion of the former military system, have been done away with, and inspectors and chief constables have superseded those denominations; this change has lessened the military element in the police, which was desirable; and on this point I would observe that little is done beyond keeping up sufficient drill to make the men smart, march together, and teaching them how to use their arms. The baton has superseded the musket on most duties, except over gaols and treasuries. Each man does not get on an average more than six weeks' drill and instruction during the year, which is sufficient.

Inspectors.

30. As regards the inspectors, they are the most useful body of officers in the force; all district superintendents speak of the advantages derived from having this well paid respectable class; they are made altogether responsible for their circles, and an active supervision is thus established over all the lower grades. One great effect of the system is the improved relations of the police with the people of the country, and during the past year the one great improvement I believe to have been the superior tone given to the force.

Office establishments.

31. During the year, amongst the changes (beneficial it is hoped), regular office establishments and moonshees have been done away with altogether, and both English and vernacular work is now entirely done by members of the regular force; at the same time the writing work was very considerably reduced at station-houses and in the district superintendents' offices. Arrears are not allowed, and at the end of the year there were no unanswered references. The evil of making work by clever moonshees was fast gaining ground when they were swept away, and the advantages of the present system are now fully admitted. Educated men will be provided from existing material, and an impetus has been given to education in the police which deserves notice.

Schools.

32. Schools had previously existed in name only, but during the last six months of the year the average daily attendance has doubled what is shown in the Return I. as the average for the whole year. Several native officers (and Sikhs amongst them) have, from profound ignorance, become scholars enough to write their own roznamchas; the force will never again have to go into the umlah ranks for station writers, and an attempt is now about to be made to impart some judicial instruction to the superior officers of police; it has been found that to a certain point in criminal cases many police officers do well enough and show great acumen, but they fail in the end in adducing proof; they do not know at all what amount of evidence is required to convict. I now propose to turn out officers in the police with some idea at least of the "law of evidence."

Recruit boys.

33. As another means of providing also a class for the police in future years from our own resources, a boy establishment (as before reported and sanctioned as an experiment) has been added to the force at no extra expense to Government; the testimony is universally in favour of this system, and the boys in several of the schools are well enough advanced to send to the higher district schools of which we avail ourselves; some of them are readers, and are made use of to give *vivâ voce* instruction to the men in the force (who cannot read) in the Acts and regulations appertaining to police, and hereafter no one will have the excuse that he acts in ignorance of regulations. The boys, besides drill and instruction, take duty as orderlies in our Court; they will be feeders to the force, and of great advantage to it hereafter.

Education movement in the police.

34. The education movement in the police has exemplified in a small way how readily natives will take to instruction if offered to them. As one instance, in the Seetapore district, besides those in the police school, no less than 19 men attend the American Mission School, viz., one deputy inspector, four head constables, and 14 constables; of these 18 learn English. One constable is so far advanced in English as to be learning arithmetic and history. The Rev. Mr. Grasey states that the men who are learning are most persevering. The attendance of these men at the school is quite voluntary on their parts; in fact, they had commenced attendance before the district superintendent was aware that they had done so. The men who attend this school are of the castes named in the margin. About 550 of all ranks are now receiving a really practical education, and the whole force in turn have *vivâ voce* instruction in all police procedure. Recruits are besides compelled to attend the school as a portion of their education as policemen. These arrangements for instructions are made without any expense whatever to Government; but when, as it is hoped soon will be the case, something is done for education in India, small grants-in-aid may be proposed.

Musselmen	3
Brahmin	1
Kaiths	2
Shepherds	2
Rajpoot	1
Seikhs	4
Kahar	1
Sweepers	2
Jaut	1
Bhaut	1

35. The

35. The proportions of castes in the police have been attended to, and the enlistments have been chiefly amongst the higher classes, of which there is even yet a deficiency; the number* as they exist, and as they are ordered, are— Castes.

Vide Appendix J.

	Ordered Proportions of Castes.	Existing Proportions.
1. Mahomedans - - - -	1,000	1,033
2. Brahmins and Rajpoots - -	2,000	1,198
3. Hindoos of lower caste - - -	3,500	3,727
4. Seikhs and Punjabees - - -	2,000	2,414

These lower caste men are generally inferior as policemen, and they are wanting in education and intelligence; the ordered proportion of inferior castes is too large, and I would reduce them by 500. Passees, as a rule, do not like the regular service, or work well, out of their own immediate circle. The Seikhs and Punjabees appear to take to the country, and the higher grades amongst them have turned out many very good officers. There is a good deal to be said, perhaps, in regard to the advantages of the police being more a local body; but I should regret to lose the Punjab element.

Rural Police.

36. In 34,487 villages there are 28,642 chowkeedars on our returns; they have worked well, and as rural police have been of great assistance to the regular force, who are in a great measure dependent on them and zemindars for the report of crime. There are, of course, many instances in which they could have detected it, and have failed. They are often themselves the criminals. I have, I regret to say, no reliable returns which show from what classes during the year the largest number of criminals have sprung. The gaol returns will, no doubt, afford the best information on this point; but as far as police reports go the passees are not responsible for the greatest amount of crime. It will be needless now to touch on the dissatisfaction expressed during the year in regard to the remuneration of chowkeedars; their transition state from receiving a regular monthly allowance from Government, and again reverting to the system of payments in land or grain, caused the discontent; but the Chief Commissioner's recent orders will correct this. Chowkeedars have not now a hard time of it; they have to report if a crime occurs; but otherwise once a fortnight or once a month, according to distance, is all that is required of them. The amount of crime reported thus is in excess of the previous year; apparently, therefore, they do their duty. *Vide* Appendix K.

Rewards to chowkeedars.

37. The Return (I.) shows that there has been no very liberal distribution of the Chowkeedary Fund, and it would be of great advantage if this money was in the hands of district officers to be distributed under proper checks. In the Khyrabad division, from being better remunerated, they are more disposed to aid the police than elsewhere. The chowkeedars are the natural police of the country, and I think a system has yet to be worked out by which what is called regular police will be reduced, and some organized system devised to deal with crime more through the village police; and this subject may hereafter be brought more prominently to notice.

Rewards to regular police.

38. The same Return (I.) shows the rewards given by magistrates in the regular force. A few district officers pay their police well for good service. New rules have now been introduced by which the police officers can reward.

Punishments.

39. I am still inclined to think that so much of the military regulation should have been retained as would have admitted of police officers flogging their own men up to 20 or 30 stripes under the confirmation of the inspector or deputy inspector general for particular classes of crime, such as "disgraceful conduct," "violence" to the people of the country or prisoners, and any marked disobedience not quite amounting to mutiny. Many good men are lost to the service, because dismissal is all that officers have to fall back on. Police officers object to fine, and rightly so; it impoverishes men, and increases the chance of their resorting to corrupt practices. Confinement also, which involves forfeiture of pay, is for the same reason unpopular; frequent dismissal is the consequence, and we thus lose trained men when a dozen lashes would have afforded a wholesome example to others, and would save a man being thrown out of employ to join malcontents. The service would be more popular if dismissal was less frequently resorted to. I strongly advocate, therefore, the punishment of flogging to the extent of 30 lashes, guarded by such restrictions as would prevent its being much resorted to; this more particularly, as district superintendents have no magisterial powers, and cannot punish their own men under Section XXIX. of Act V., and the inspector general's powers as a magistrate over his own men are also limited in this respect; as it has been ruled that he cannot punish without a regular trial before himself, it is obvious he cannot try on the spot, and it would be equally inconvenient frequently to drag witnesses to head quarters for investigation. It appears to me that such cases of our own men as require severer punishment than can be given under Section VII. of the Act, should be tried by district superintendents, and the sentence be confirmed by the inspector general on the record. Three months' imprisonment is all we are permitted to give our own men, and there seems to me no sufficient reason for placing a restriction which virtually negatives this power.

Town police. *Vide* Appendix L.

40. Lucknow and Fyzabad are the only cities requiring anything like a special police, though several towns, as shown in the Appendix, have a small separate force; in these latter the men are local, but are under the orders of the police officers, and subject to the same rules as other police when the number is less than eight.

Pound fund.

41. The Pound Fund receipts, disbursements, and balance are shown in the Appendix (M.): a net balance remained at the close of the year at the disposal of Government, after paying all expenses, of 11,736 rupees.

Superannuation fund.

42. During the year the superannuation fund has been established under the provisions of the Police Act. Subscriptions of constables have been fixed at half anna per rupee, and all above that grade at one anna; the rules have already been submitted and approved of. It will be an admirable provision in future years, and save much expense to Government; but it should fall on the State, I think, in the first instance, to undertake a portion of the pension of men of the late army who have done good service, but had only served from 10 to 15 years before transfer to the police. The ruling has been as yet that the fund shall pension all who had not served 20 years in the army, and that Government should pension all above that period. The services of men sent by the Rajah of Puttialah and other independent chiefs should reckon towards pension in the same way as service in our own army. The men of this police entered the service on the full understanding that their previous service would reckon for pension as if they had remained in the army; but the Government letter No. 13, dated 7th January 1862, forwarded with the Chief Commissioner's No. 139, dated 16th January 1862, upsets this understanding.

General police fund.

43. The sum of *Rs.* 15,484. 13. 6. has been saved by guards furnished to the military and to private parties by the service of processes (which is only 1,344 rupees) and savings from establishment, which latter item is in addition to the saving of 2,67,876 rupees, effected by reductions in the force (elsewhere noted). In Appendix (N.) a detail of these items is given, which is only for the last few months of the year, when the Act was declared in force in Oudh. The sum of 15,484 rupees, a saving from the Budget Estimate of 1861-62, might be kept in deposit, and appropriated to the repairs of stations during the next year.

Police stations.

44. The police have been very indifferently located as yet, but in consequence of the reductions (previously exhibited) 32 station houses are now being built from the savings effected during the year, and they will be completed before next rains. I trust the remaining stations may be built by other savings.

Court duties.

45. During the past year the police have taken up in the magistrates' courts the Nazir's work, they serve all processes, bring all cases complete before the magistrate, and are responsible to him for these duties. A marked improvement has taken place in the way charge sheets are forwarded. Every case now sent to a European magistrate is submitted in English by the district superintendent, or in his absence is prepared by his assistant (if he has one), or by the head quarter inspector. There is no running after magistrates with chullans; if he takes his court into the district, his court officers accompany him, and summon all parties required by him direct from camp. The charge sheets contain a good history of the case, and should be of much aid to the magistrate; the object enjoined on police officers is to assist the judicial department in every stage of a case to the utmost. The work in courts has, I am assured, been satisfactorily done, and every criminal court of the province, except the honorary assistant magistrates', is now provided with properly qualified officers for the duty. With the facilities afforded us by the Judicial Commissioner in rules lately laid down for the conduct of business, and by the assistance of the magistrates, there is ample room for hoping that in the next year criminal cases will be brought before the courts in a more satisfactory and expeditious way than has ever yet been known. The police have the means at their disposal, and for the future should be held very strictly responsible for any delays caused by them, either in cases taken up of their own motion, or cases in which the magistrate calls on them to act.

District dâk.

46. The district dâk arrangements are indifferent in some instances, and cause delays in the transmission of orders; it has for some time past been understood that the district postal service would be undertaken by the General Post Department, but nothing has as yet been done to relieve the police from the delivery of letters; but I am not at all sure that the business of our Courts would not be expedited if the district dâk arrangements were altogether in our hands, and I believe it could be done as economically, if not more so, by paid hurkaras attached to the police, who would then, of course, do the general public service of delivery of letters as well as the Government service.

Honorary assistant magistrates' courts.

47. Although the officers are only now being attached to the honorary assistant magistrates' courts, the police have performed such work as serving processes, or summoning witnesses; they chullan and prosecute cases before the honorary magistrates when necessary; and it is most satisfactory to note that there have been no complaints against the police; or, to be particular, I may add, one talookdar magistrate, in one instance, mentioned the delay of the police in replying to his requisitions. I last year reported on the valuable aid received from talookdar magistrates, and this year I can fully confirm previous conviction that they are most admirably adapted for the position they hold; that the ability they show, and the cordial co-operation they give to the police, is an immense addition of strength to that body, and supports their authority in the country; it is to their influence and to their working of the passees (village police) that detective success must generally be attributed.

Talookdar's relatives in police employ.

48. Some of our native police officers are selected from the families of the talookdars. Maharajah Man Sing, Rajah Hurdui Buksh, and others, have near relatives in the police. And here I would with deference note the working of the rule that officers should not serve in districts in which they hold land; it appears to me that it is in such positions that their services are of more value; for instance, Man Sing's son-in-law has worked out in his estate some very good cases, but removed to another district he will not be nearly so efficient an officer. Our honorary magistrates act as judges in their own estates, yet when

when a man enters the regular service of our Government, it is ruled that he cannot serve, whether as magistrate or police officer, near his own land; yet it would seem reasonable to suppose where a man's best interests be, there he will exert himself to the best of his ability; in fact he would be less likely to disgrace himself in the immediate neighbourhood of his home than anywhere else. We ignore the value altogether of local knowledge and experience, and make it a rule for every Government servant to serve where he is least known and liked. I venture to express an opinion that superior officers, whether European or Native, will do the best work in the locality in which they have some personal and vested interest. I am aware there are many arguments against such a system, but they hardly outweigh the advantages.

Advantages of criticism to police.

49. Under the present system the police will, of course, be subject to criticism from the authorities trying cases brought up by our agency; but the most beneficial effects have already, I venture to say, been derived from this; so long as the departments were one, the police were subject to no strictures, however unlicensed and unbridled their course; little was heard of it, until complaints had become so loud of the tyranny and oppression of the system that inquiry could no longer be put off. During the past year the new system has been fully worked, and the rules for guidance by the preliminary Act XIII., which were entirely in accordance with the code introduced on the 1st of the present year, have been acted up to, subject then, as it now wisely is, to checks in regard to confessions and detention of offenders, and subject to an almost inquisitive supervision by the judicial officers, who can review every act as it comes before them in every case; the police are compelled to refrain from acts that formerly brought them into such public ill-repute.

50. For the future they will get no more credit than they actually deserve; and whether or no judicial officers are right that under the existing system police are not so successful in the detection of crime as they were of old, or whether police officers are correct in asserting that even in the now raw state of the system they are quite equal as detectives, it matters little, in comparison to the fact, that police must, of necessity, now be more respectable; their actions are under some check. Bribery, corruption, violence to prisoners, oppression of the public at large, will all be exposed so long as the departments are separate and distinct; and here I would report that a rule has been adopted in this province that no relatives of the judicial or civil native establishments shall be admitted into the police. By inquiries instituted last year, it appeared that large numbers had crept in, and many valuable men have now been relieved from police employ in consequence of the rule. This may give rise to some unpleasant feeling, but it should be borne in mind that it is no disrespect to the highly educated classes filling our courts that this is done; it is simply with a view to prevent anything like an amalgamation between the two departments, for an unity of interests in the lower native grades often defeats the best efforts of our officers to check irregularities.

Detection under new and old system.

51. Whilst advocating, however, the advantages to the police arising from the scrutiny maintained by the judicial department over their proceedings, I would beg to make a slight notice of such comparisons as have been drawn from time to time in regard to the detective ability of the police under the present and former system. Attention being directed to this point, it will be found that there is the same want of success as of old in theft, burglaries, and robberies; but on the whole there is no remarkable deterioration, for taking the Punjab in the last year of its police under the old system and Madras, Oudh in the past year bears comparison as shown in the following two returns:—

No. 1.—COMPARATIVE STATEMENT showing the Number of Cases (cognisable by the Police) Reported; the Number of Cases in which Apprehensions were made; and the Per-Centage of "Cases Apprehended to Cases Reported" in Oudh, the Punjab, and Madras.

Name of Province, and Year.	Number of cognisable Cases Reported.	Number of Cases in which Apprehensions were made.	Per-Centage of Cases Apprehended to Cases Reported.	REMARKS.
Oudh, 1861 - - - - - - -	9,110	5,357	58·81	
Punjab, 1859 - - - - - - -	23,093	12,905	54·46	
Madras, 1859 - - - - - - -	17,434	9,565	54·29	Apprehensions include cases pending at close of former years.

No. 2.—COMPARATIVE STATEMENT showing the Number of Persons brought to Trial for Offences cognisable by the Police; Number of Persons Convicted and Acquitted; and Per-Centages of Convictions and Acquittals in Oudh, the Punjab, and Madras.

Name of Province, and Year.	Number of Persons brought to Trial.	Number of Persons Convicted.	Number of Persons Acquitted.	Per-Centage of Persons Convicted, to Persons Tried.	Per Centage of Persons Acquitted or Released, to Persons Tried.	REMARKS.
Oudh, 1861 - - -	10,305	6,415	3,890	62·25	37·74	
Punjab, 1859 - -	22,318	14,439	7,879	64·65	35·26	
Madras, 1859 - -	24,313	4,011	20,302	16·49	83·50	

CHAP. XV. Oudh.

By the above it would appear, then, that Oudh is best in apprehensions to cases reported, whilst the number of persons acquitted are very considerably below the Madras average, and scarcely above the Punjab, to which it runs close also in convictions; but avowedly it has not been the object as yet to press the police hard to secure convictions, or to make apprehensions. I have kept in view that amongst natives high pressure put on to gain any particular end only leads to oppressive acts. Unlimited apprehension has indeed been checked as much as possible; the records will show that "violence to prisoners" to secure confession, "bribery," and tyranny to the public, have been most unrelentingly dealt with during the year. In curing these evils, for cured things will be, something is perhaps sacrificed to public justice; and the police may suffer in their character as detectives; but the principle, right or wrong, is strongly inculcated that justice must not be secured on the above terms. Whatever may be said, however, of the police as detectives, officers of all departments, talookdar magistrates, and the large land-holders, all bear testimony to the much improved character of the police.

Oudh Association.

52. The "Oudh Association" as a body have promised me their valuable aid in putting down bribery and corruption in the force, and the example of the members of that Association alone will have a marked effect, and I venture to express a warm opinion that this will be but one of many advantages that will accrue to the administration at large if this body are worked to the useful ends they themselves propose.

Police freedom of action required.

53. There are points, too, under the new system that may eventually call for attention; for however desirable it may be to place checks on the police, and such judiciously used, are no doubt of great public advantage, yet the question must some day arise in regard to interference in the action of the police. In a large city like Lucknow, for instance, it cannot always be desirable to disclose the names of those giving information; it is not at all intended by this remark to advocate the employment of paid informers; and in Circular 325 of 1861 I pointed out "the wide distinction between professional thief-takers and the police availing themselves of information voluntarily offered, or gained by the police from the general public, and that we were not bound, in my opinion, to bring into a public court all parties from whom information is gained; but whilst officers used their influence to prevent the employment of the infamous class of informers, I deemed them quite at liberty in particular cases to avoid disclosing publicly their sources of information." This reticence on the part of the police is deprecated, and I am inclined to think that the stress laid on the conduct of the police in some cases in the City of Lucknow has caused embarrassment; therefore I observe, that the balance between the checks it is so wise to place over them, and any injudicious cavilling at their proceedings requires to be nicely preserved, for any undue weight of censure thrown into the scale may prevent the police from acting boldly; they will always be on the look out for stringent remarks, and especially in such a place as Lucknow, where the conduct of the police can be so easily discussed, their freedom of action should not be too much interfered with. On another point, too, the police are, perhaps, too much surrounded with checks and suspicion. The law has wisely determined that confession before the police is no evidence, but it has provided that any magistrate can make preliminary investigations on the spot, and a confession before him is evidence. It has, however, been ruled here, that no magistrate should take down a confession until some advanced stage of the proceedings, which has not been very clearly defined as yet; for instance, in a case of murder in which three defendants were taken, there was good evidence to prove that they were the last persons seen with deceased, and there was a specific charge of murder made against them; one of the parties volunteered confession; the police officer did not take it himself, but went before the magistrate on the spot. It was ruled, however, that this magistrate should not take it down, or interfere, till the case was more advanced; these checks are likely to detract from the chances of a successful prosecution by the police, they are not provided for by law, but the contrary; and public justice might be defeated by the omission on the part of a magistrate to record a confession at any stage of the proceedings. This instance is merely given to exemplify my assertion that some day the police must be relieved from over-strained interpretations on particular points; but whilst noting in a general way the very exceptional instance in which the action of the police may be considered to be cramped, it will be noticeable throughout the reports the cordial testimony given by district superintendents to the assistance they have received from magistrates. The harmonious working of the two departments may indeed be recorded without an exceptional instance; and I have also to notice the very valuable aid I have myself received from the Judicial Commissioner on many occasions in which it has been necessary to consult him in regard to orders issued to police relative to their court and other duties, in which we come into contact with the judicial authorities; and if this part of their work has been satisfactorily done by the police, as I believe it has, much is due to Mr. Campbell's assistance.

54. During the year the police has taken its standing as a separate department; the officers are, I venture to say, better satisfied with their position; their relations with the magistracy are defined, and my best acknowledgments are due to Commissioners and Deputy Commissioners without exception for the interest taken in the police.

Character of officers.

55. It remains now to speak of the officers of the force, European and native; and in the first instance I would remark that much of the success of the new system depends on the selection of district superintendents. The frequent but unavoidable changes, and the consequent necessity of placing too young officers in charge has been a disadvantage.

I have

I have the pleasure of reporting that the district superintendents of this force are, as a body, extremely zealous in the performance of their duty; and what is a great element for future success, they take much interest in their work. During the year more *esprit de corps* has been established, and it is most desirable that the feeling of emulation now existing should be kept up amongst the district superintendents. Captain Barrow is a very steady good officer, and no police in the province are perhaps in better order than that of Seetapore. Captain Hill is an energetic and capital police officer, and has been of much assistance in compiling a very useful work for the native grades. Captain O. L. Smith, absent on leave during the greater part of the year, and Captain Ryall, are both very good officers; the latter is very highly spoken of, and deservedly so, by his Deputy Commissioner. Captain Sharpe is a most diligent officer, who devotes his whole time to his work; he has some mistaken principles, which he will, I trust, correct; but it is due to him to say that there is no more zealous and intelligent officer in the province. Lieutenant Danvers requires to be earnest in his attention to his duties to place him on a par with the above-mentioned officers; he has all the desire to do well, and his future success depends on himself. There are not two more promising officers in the force than Lieutenants Woodcock and Tweedie; they have been most attentive to their duties, and if they continue in the same course will deserve well. Captain Ouseley's qualifications as a police officer can be best judged of by the fact of his being recently selected to perform the duties of city magistrate. Captain Clarke, appointed a district superintendent during the past year, is fast making a good police officer; he is of some standing in the service, and will be an acquisition. Lieutenants Maynard and Stainforth, the two junior district superintendents, in the absence of older officers, succeeded too young perhaps to independent charges; but they have both done remarkably well, and are fast becoming fitted for their position. Of the assistants, Lieutenant de Montmorency, Mr. Hamilton, Lieutenant Woodcock, and Mr. Blenman are promising officers; the latter has, I think, a speciality for police work, and has shown himself a good assistant in the city of Lucknow, which has been in his charge for some time. We have some very good European inspectors, amongst whom I may mention Mr. Connors and Bonnor; the former knows his work well, and the latter is fast learning it. Messrs. Ewart and Masters also promise well; during the year we turned out one European inspector (Mr. Berrill), who is doing very well as an assistant district superintendent, I am informed, in the Central Provinces, to which he was promoted from Oudh. Mr. Prince in the city police is also a rising officer. The limits of this report will not admit of my naming so many of the native officers of the police as I could desire; it is to them we have to look in a great measure for the successful working of the new system; the improvement in knowledge of their duties during the year is most marked. The officers named in the margin,* I feel confident, are most trustworthy, and fitted for their places; the greater number are officers of the late army; some are better than others, but all I have named are most valuable servants of Government, and well deserve notice. I would here beg to advocate that the grade of assistant be opened to native inspectors; they are some of them worthy to work in concert with any of the grades of European officers, and I hope to see native assistant district superintendents in the Oudh police.

56. I have been much indebted during the year to Captain Aitken, deputy inspector general, for his assistance in working the force. The chief commissioner will have been able to judge from his notes on the inspection of districts that he carries out determinedly the views and principles approved of by the chief commissioner for the better organization of the police; he has the good of the service and success of the system much at heart, and works earnestly for it.

57. An interchange of circular orders has taken place between this province, the Punjab and North West, and I cannot close this report without bringing to the chief commissioner's notice the valuable assistance received from Mr. Court and Major Hutchinson; to the former officer I am also indebted for aid on several points referred to him.

I have, &c.
(signed) *L. Barrow*, Lieut.-Col.,
Offg. Inspector General of Police in Oudh.

† The difference of 10 persons between this and the number shown last year as "under trial," is owing to the omission in Captain Chamberlain's statement for that year of persons concerned in Thuggee and poisoning cases.

Favourable notice of the Extra Assistants	160
Commendation of Major Anderson	161
Dr. Fleming's deep interest in his duties	162
Captain Tyrrel a most zealous officer	163
Favourable notice of Captain Francis and Lieut. Haldane	164, 165
Excellent and approved services of the officers who have left the Commission	166

CHAPTER XVI.

HYDERABAD ASSIGNED DISTRICTS.

ANNUAL REPORT of the HYDERABAD ASSIGNED DISTRICTS for the Year 1861-62.

(No. 26 of 1862.—Civil Department.—General.)

From Colonel *Cuthbert Davidson*, C.B., Resident at Hyderabad, to Colonel *H. M. Durand*, C.B., Secretary to the Government of India, Foreign Department, Fort William; dated Hyderabad, 27 June 1862.

Sir,

THE following Administration Report of the Hyderabad Assigned Districts, for the year 1861-62, is enclosed for submission to the Right Honourable the Viceroy and Governor General of India in Council.

Scope of the present Report.

2. The judicial portion of the Report has reference, in accordance with the orders of Government, to the calendar year 1861, and the remaining sections comprise the transactions of the official year, commencing on the 1st May 1861, and ending on the 30th April 1862.

Preliminary Remarks.

3. The territorial limits of the districts in Berar, belonging to his Highness the Nizam, comprising the Hyderabad Assigned Territory, will be most readily understood by a reference to the Sketch Map* which accompanies this Report.

* Appendix No. 1.

Transfer of Districts completed.

4. The transfer of the districts required to complete the stipulated amount of assigned revenue, namely, 32 lacs of rupees per annum, was completed on the 23d October 1861.

Boundary of the Districts.

5. The Wurdah, it will be perceived, is the boundary on the east; the Paeen Gunga, for about two-thirds of the distance, is the boundary on the south; but, unfortunately, the remaining portion of the southern boundary, and on the west, north-west and north, except where it is coincident with the Taptee, is open, and without any natural demarcation.

SECTION I.—JUDICIAL.

PART I.—CIVIL JUSTICE.

Constitution of the Civil Courts.

6. On the restoration, in the early part of 1861, to his Highness the Nizam, of the Raichore and Dharaseo districts, and the acquisition of supplemental territory in Berar, an assistant commissioner was added to West, a tehsildar to East Berar, and another tehsildar was transferred from the former to the latter district. With these exceptions, no alterations have been made in the constitution of the Civil Courts.

Number of Civil Courts.

7. The sanctioned number of Superior and Small Cause Courts is 30, namely, one revenue and judicial commissioner's, two deputy commissioners', five European assistants', two European extra assistants', two native extra assistants', and 18 Small Cause Courts.

Paucity of Officers.

8. These courts are numerically sufficient to carry out the administration of civil justice efficiently and promptly; but at no one time during the year have all the officers who should have presided over them been present at their posts. At the close of the year no less than four European officers were absent through illness, and in so small a commission this must inevitably involve a serious obstruction of judicial business.

CHAP. XVI. Hyderabad Assigned Districts.

Increase of litigation.

9. There was also during the year an increase in the amount of litigation, resulting from the introduction into the assigned districts of Act XIV. of 1859, which provides for the further limitation of suits. The courts were crowded with creditors, naturally anxious to obtain the decision of their claims before the change of law should render them obsolete.

Act for simplifying the Procedure of Courts of Civil Judicature.

10. In June 1861 the Government sanctioned the application to the Berar districts of Act XXIII. of 1861, for simplifying the procedure of the courts of civil judicature not established by Royal Charter, and accordingly this Act, with the Oude modifications, came into operation on the 1st January 1862, in East and West Berar.

Cases pending and filed.

11. At the close of the year 1860, 247* original suits were pending, and during the past year 5,583 were filed, making a total of 5,830. In the previous year 2,273 only were filed.

Cases decided.

12. In 1861, 2,219 cases were decided on their merits, of which 2,040 were decreed in favour of the plaintiff, and 179 in favour of the defendant.

Cases pending.

13. Seven hundred and forty-four cases were amicably adjusted, 12 were withdrawn, and 135 were dismissed for default. Thus altogether 3,110 cases have been disposed of, leaving 2,720 cases on the files at the close of the year.

Cause of large number pending.

14. The number of cases disposed of in 1860, was 2,264, so that 846 cases have been disposed of in the year under report more than in the previous year, and the larger number of cases pending at the close of 1861, simply represents the increase of suits which the introduction of the New Limitation Act brought upon the files. Special instructions have, however, been issued, impressing upon the district officers the necessity of clearing off these arrears with all possible energy.

Value of property litigated, and cost of litigation.

15. The value of property litigated was *Rs.* 5,66,729. 2. 10., and the cost of litigation *Rs.* 19,554. 11. 6., or *Rs.* 3. 7. 2. per cent. The average value of each suit was *Rs.* 182. 3. 8., and the average cost was *Rs.* 6. 4. 7.

Duration of suits.

16. The average duration of suits was 38½ days. In 1860 it was 44½ days, and in 1859, 83 days.

Courts of Appeal.

17. Appeals both in civil and criminal cases from the decisions of assistants and extra assistant commissioners of all grades lie, in the first instance, to the deputy commissioner of the district.

Commissioner's Court of Appeal.

18. On the Commissioner's file there have been 60 cases, 47 of these suits remaining from 1861. The Deputy Commissioners' decisions have been reversed in 10, confirmed in 38, and modified in two cases. Of the rest three were remanded for re-investigation, and one decided by Razeenamah (deed of compromise), leaving six pending at the close of the year.

Value of property litigated.

19. The value of property under litigation in decided cases was *Rs.* 1,60,517. 5. 7., and the costs *Rs.* 4,681. 1., or *Rs.* 2. 14. 8. per cent.

Average value and cost of suits.

20. The average value of each suit was *Rs.* 2,972. 8. 8., and the average cost *Rs.* 86. 11.

Duration of cases.

21. The average duration of each case was 280 days. In 1860 it was 101 days. The Officiating Commissioner explains that the cause of delay is to be attributed to the large number (47) of cases left on the file at the close of 1860, and to there having been no Commissioner during the first two months of 1861.

District Appeal Courts.

22. In the District Appeal Courts 44† cases were pending trial at the close of 1860, and 151 were instituted during the year under report, making a total of 195.

23. Of these 125 were decided on their merits; the orders of the lower courts having been confirmed in 96, and reversed in 29 cases. Of the remainder one was amicably adjusted, 14 were remanded for re-investigation, and two dismissed for default, leaving at the close of the year an arrear of 53 cases, slightly exceeding that of the previous year (44).

Value of property litigated.

24. The value of property litigated was *Rs.* 20,581. 14. 4., and the costs were *Rs.* 1,523. 5. 6., or *Rs.* 7. 6. 5. per cent.

Average value and cost of litigation.

25. The average value of each suit was *Rs.* 147 0. 2., and the average cost *Rs.* 10. 14. 1.

Duration of each suit.

26. The average duration of each suit was 96½ days; in the previous year it was 121 days.

Detention of witnesses.

27. Of 1,732 witnesses summoned, only 214 are shown to have been detained for more than one day; and of these 14 only for seven, four for eight days, and one for a month.

28. One

* Disagrees with last year's Statement, because, it is stated, the Revenue suits are excluded.

† A discrepancy is here also noticed between this and last year's Statement; probably owing to the before specified reason, the exclusion here of Revenue suits.

28. One hundred and eleven persons were imprisoned for debt during the year, at the close of which five remained in confinement. Civil debtors and Revenue defaulters.

29. In addition to the suits decided in the Civil Courts, 84 original and 29 appeal suits were disposed of in the Revenue Courts, and 53 original and 16 appeal suits remained on the file at the close of the year. District Revenue suits.

30. On the Commissioner's Revenue file there have been 26 cases, 15 of them suits remaining from 1860. The Deputy Commissioner's decisions have been reversed in four, and confirmed in nine cases; of the rest one was remanded for re-investigation, leaving 12 pending at the close of the year. Commissioner's Revenue Appeals.

31. The value of property litigated in these suits was *Rs.* 8,772. 0. 11., and the costs *Rs.* 393. 4. 6., or *Rs.* 4. 7. 9. per cent. Value of property litigated.

32. The average value of each suit was *Rs.* 626. 9. 2., and the average cost *Rs.* 28. 1. 6. Average value and cost of suits.

33. The average duration of each case was 347 days. Duration of cases.

PART II.—CRIMINAL JUSTICE.

34. Under the authority of the Government of India the provisions of the New Penal Code have been extended to the Hyderabad Assigned Districts, and it accordingly came into operation on the 1st January 1862. Had there been sufficient time to test the practical working of the Code, any detailed mention of it would not properly find a place in this report; but there is reason to believe that it will be found an easily intelligible and comprehensive system of criminal law. The New Penal Code.

35. There has been, on the aggregate, an increase of detected crime: but it is very satisfactory that there is a marked decrease in organized crime of the most serious description. Increase of crime.

36. In 1859 there were 47 dacoitees (gang robberies); in 1860, 22, and 15 in 1861. Dacoitees decreased.

37. Highway robberies have considerably increased. They are for the most part perpetrated in the jungly and sparsely populated southern portion of East Berar, to which the recent treaty has added an extensive tract of country. These highway robberies have not generally been attended with any degree of ferocity. The principal sufferers have been villagers, returning from the neighbouring market town with their weekly purchases and pittance of coin, of which they have been robbed, but without the further cruelty of wanton violence. A bad harvest, high prices, and consequent distress among the poorer classes are among the causes to which the increase in this species of crime is to be attributed, while its commission is rendered easy, and apprehension of offenders difficult by the jungly nature of the district in which it has been most frequent. Increase of highway robberies.

38. The following Table contrasts the crimes committed in 1860 and 1861:— Comparative state of crime.

	In 1860.	In 1861.
Crimes of the 1st Class of Atrocity.		
Murder	19	28
Dacoity with murder	1	3
Robbery with murder	1	3
Culpable homicide	1	1
Manslaughter	6	—
Attempt to murder	4	10
Total	32	45
Crimes of the 2d Class of Atrocity.		
Dacoity with wounding	1	2
Highway robbery with wounding	3	6
Robbery with ditto	2	3
Grievous hurt	3	1
Assault with wounding	9	3
Rape	4	—
Causing hurt with a shart instrument	3	3
Wounding	1	5
Unnatural offence	—	1
Administering opium	3	3
Wounding in attempt to commit robbery	1	—
Previous abetment of suicide	—	1
Total	30	28

CHAP. XVI. Hyderabad Assigned Districts.

Crimes of the 3d Class of Atrocity.	In 1860.	In 1861.
Dacoity	20	10
Highway robbery	53	90
Robbery	3	8
Burglary	283	432
Theft	410	264
Arson	8	2
Cattle stealing	137	157
„ killing	—	1
„ lifting	—	1
Causing hurt	6	5
Lurking, house trespass and theft	4	16
Kidnapping	1	1
Total	925	987
Crimes of the 4th Class of Atrocity	1,194	1,549
GRAND TOTAL	2,181	2,609

Value of property stolen and proportion recovered.

39. The value of property stolen is estimated at *Rs.* 60,514. 2. 1.; that of the portion recovered at *Rs.* 10,092. 14. The average amount stolen in each case was *Rs.* 23. 9. 3., and the proportion per cent. recovered was *Rs.* 16. 6. 6., being a somewhat more favourable result than was obtained last year, namely, *Rs.* 15. 8. 11.

Crimes not traced.

40. Of 2,609 reported cases of crime the police have failed to trace 870, or 33 per cent.

Result of trials.

41. Of 1,862* cases committed for trial during the year, 306 resulted in total acquittal, in 1,506, convictions were obtained, and 50 remained for trial.

Number of cases disposed of in the several Courts.

42. The following statement shows the number of cases disposed of in the several Courts:—

1	Commissioner's Court	88 Cases.
2	Deputy Commissioners' Courts	125 „
5	Assistant Commissioners' Courts	310 „
3	Extra Assistant Commissioners' Courts	13 „
18	Tehsildars' Courts	1,276 „
	TOTAL	1,812 „

Average duration of trials.

43. The average duration of Trials is shown below:—

1	Commissioner's Court	59 Days.
2	Deputy Commissioners' Courts	20 „
5	Assistant Commissioners' Courts	21 „
3	Extra Assistant Commissioners' Courts	27½ „
18	Tehsildars' Courts	13 „

Sentences passed.

44. The following is an abstract of the sentences passed:—

	Confirmed by the Resident.	By the Commissioner.	By the Magistracy.

„ 9 „	22	27
„ 10 „	24	55
„ 1 month	191	275
TOTAL	3,346	4,547

PART III.—POLICE.

46. A new system of police, upon the constabulary principle, lately inaugurated at Madras, has been submitted to and sanctioned by the Government of India, at an annual cost of about 10,000 rupees more than that at present existing. This provides for more ample supervision by European officers; while these officers will be at leisure to devote themselves entirely to their police duties, instead of being embarrassed, as at present, with interruption from their civil occupations. It was hardly possible, under the old system, and with the intermixture of jurisdiction in the districts, as at first transferred by the Nizam's Government to British management, that any system of police could be efficient. It will be observed from a glance at the Sketch Map* which accompanies this Report, that the portions marked yellow and green, Surf-i-khas (Crown lands) and Jagheers (private estates), completely interlaced the portions of the territory under British jurisdiction, and there was always conflicting authority at work, which prevented the prompt and combined action of the police, and rendered their exertions futile. The districts so coloured have now, however, come also under the immediate control of the British administration, and there ought to be no further difficulty in establishing and organizing the efficient body of police which has been sanctioned. The new Constabulary Police.

* Appendix No. I.

PART IV.—GAOLS.

47. In 1861 there was no change in the gaol buildings; but sites for the new penitentiaries at the head quarters of each district were selected and sanctioned, and their construction will be commenced during 1862-63. Gaol accommodation.

48. An attempted outbreak took place among the prisoners at Sooltangherry, which resulted in six of them being killed, and several wounded; none succeeded in effecting their escape. Attempted outbreak.

49. The average number of prisoners during the year was 672, and the average cost of each prisoner was *Rs.* 44. 9. 11. Average number of prisoners.

50. In-door labour has not been introduced to any extent worth noticing, as the imperfect nature of the present gaol accommodation does not admit of it. In-door labour.

51. During the monsoon, scurvy made its appearance among the prisoners in the Sooltangherry Gaol. Immediate instructions were issued to ensure efficient medical attendance, a thorough ventilation and white-washing of the buildings, a judicious variation of diet, personal cleanliness among the prisoners, the removal of noxious vegetation in the vicinity, and every sanatory precaution. Of 198 prisoners confined in the gaol 11 died. Scurvy in the Sooltangherry.

52. The average mortality among the prisoners throughout Berar was 24, or 3½ per cent. Average mortality in both Districts.

CHAP. XVI. Hyderabad Assigned Districts.

SECTION II.—REVENUE.

PART I.—LAND TAX.

Revenues of the new Districts.

53. The revenues of the districts in Berar, transferred to British management by the Treaty of December 1860, were collected by the Nizam's officers for the year 1860–61, and did not form part of the actual income of the Assigned Districts until the year 1861–62.

Revenue demand compared with previous year.

54. For the purpose of comparison, however, the revenue demand of each year is noted in the margin, irrespectively of its appropriation or of the agency through which it was realised.

For the year 1860–61	36,37,058 rupees.
For the year 1861–62	39,13,433 „
Increase of Revenue demand in 1861–62	2,76,375 rupees.

Land Revenue proper.

55. In 1860–61 the demand on account of Land Revenue proper was 29,83,415 rupees; in 1861–62 it amounted to 32,24,718 rupees, showing an increase of 2,41,303 rupees.

Taxes relinquished in the new Districts.

56. A much larger immediate increase of Land Revenue might have been shown, had it not been found necessary to relinquish, in the newly-acquired Talooks, many taxes imposed by the Native Government, which our system of administration does not recognise, and to introduce in those Talooks generally a more equitable Government demand. In the Surf-i-khas estates (Crown lands) especially the exactions were excessive, and rent was charged for land that had been uncultivated for years. The natural consequence was, that people threw up their holdings in despair; but we may reasonably trust to a more liberal system for a rapid extent of cultivation and prosperity.

Fall of rain.

57. The last agricultural season has not been by any means favourable. Not that there has been a deficiency of rain in the aggregate, but it fell unseasonably: at one time the country was deluged, and at another completely parched up.

State of the crops.

58. The cotton crop was a light one, as was also the jowarry crop, upon which the greater portion of the inhabitants depend for food, and the scarcity in Berar itself, as well as in the adjacent districts, resulted in almost famine prices; jowarry, for instance, ordinarily sold at 45, falling to 20 seers for the rupee. Those of the cultivators who had good crops, which were not in the grasp of the money-lenders, must have derived large profits; but there has been some distress among the poorer classes. The general prosperity of the country is, however, proved by the facility with which the revenue has been realised even in a bad season.

PART II.—SAYER.

Sources of Sayer Revenue.

59. The principal items included in Sayer are the Grazing Tax, and the produce of fruit trees. The demand in 1860–61 was 1,02,989 rupees; in 1861–62, 1,06,412 rupees; exhibiting an increase under this head of 3,423 rupees.

PART III.—ABKARREE.

Increase of Abkarree Revenue.

60. The increase arising from the sale of the Abkarree contracts amounted to 48,671 rupees. The demand in 1860–61 was 3,03,517 rupees, and in 1861–62, 3,52,188 rupees.

Realisations from Opium Contracts.

61. The sale of the opium contracts has realised 36,436 rupees, being 8,659 rupees in excess of the previous year; 3,402 rupees were uncollected at the end of the year, but no portion of this sum is irrecoverable.

PART IV.—STAMPS AND MISCELLANEOUS.

Increase of Stamp Revenue.

62. In consequence of the introduction of the new Act, the Stamp Revenue has been very nearly doubled. In 1860–61 it amounted to 37,471 rupees; in 1861–62, to 70,377 rupees.

Miscellaneous Land Revenue.

63. The demand on account of Miscellaneous Land Revenue for 1860–61 was 75,342 rupees, and for 1861–62, 48,045 rupees. The decrease of 27,297 rupees has been caused by village expenses, held in deposit, having been credited to Miscellaneous Land Revenue in 1860–61.

Salt Revenue.

64. The Salt Revenue, which is derived almost exclusively from the wells near the Poornah River, amounts to 36,160 rupees, being 6,552 rupees in excess of the income from

from the same source in 1860-61. 9,513 rupees of the demand remained uncollected at the close of the year, but the whole of the balance is held to be recoverable.

65. The receipts under the head "Law and Justice" amounted to 13,623 rupees, being 1,481 rupees above those of the previous year. Receipts under "Law and Justice."

66. The realisations under "Police" were 8,494 rupees, or 7,921 rupees more than in 1860-61. Receipts under "Police."

67. A sum of *Rs.* 217. 9. has been credited to "Public Works" in East Berar, on account of the sale of some Government buildings. Receipts from Public Buildings.

68. The Miscellaneous revenue, derived from the sale proceeds of intestate property and various other sources, amounts to 16,761 rupees. There is a decrease in this item of 47,462 rupees, which arises from about half a lakh of accumulated village expenses in East Berar, which had reverted to Government, being credited to this head in 1860-61. Sale proceeds of intestate property, &c.

PART V.—GENERAL RESULTS, INCOME TAX, LOCAL FUNDS, &c.

69. The total demand on account of Land Revenue, as fixed at the annual settlement for 1861-62, amounts to 37,31,364 rupees, being 2,66,102 rupees in excess of the previous year, and the whole demand has been realised with the exception of 1,15,407 rupees. This balance is chiefly owing to Land Revenue payable by Purgunnah officers, which will be settled on receipt of their Roossooms, and by the last instalment on account of Abkarree contracts falling due after the close of the year; 14,649 rupees are considered irrecoverable. Land Revenue demand and collections.

70. In the year under review the whole Revenue demand on account of the assigned districts, omitting Income Tax, amounted to 39,13,433 rupees. The demand from the same territory in 1860-61, when part of it was under the management of the Nizam's officers, was 36,37,058 rupees, showing an increase in the year 1861-62 of 2,76,375 rupees. Total Revenue demand and collections.

71. The uncollected balances amount to 1,28,322 rupees, of which 14,649 rupees on account of Land Revenue is, as above stated, supposed to be irrecoverable. Uncollected balances.

72. In addition to the foregoing sources of income is to be noticed the income tax, amounting to 8,294 rupees for the year 1861-62, which is credited to Imperial revenue. This tax is levied only from servants of Government. Income Tax.

73. Besides the Government revenue, there is a considerable sum derived from local funds, available for the internal improvement of the districts. These funds consist of the road fund, levied from cultivators at the rate of one per cent. on the land revenue; the municipal fund, which formerly was collected on different systems, but which has now been distributed over the trading classes, as nearly in proportion to their profits as possible; the pound fund, accruing from the sale of unclaimed cattle, which has only recently been included among the local funds and the ferry funds. During the year some subscriptions previously collected for educational purposes, but unemployed, have been credited to a school fund. Local Funds.

74. The demand on account of the various funds is as follows:— Demand under this head.

Road fund	34,179	rupees.
Municipal fund	68,402	„
Pound „	4,477	„
Ferry „	285	„
School „	866	„
TOTAL	1,08,209	„

75. The demand from the same sources in 1860-61 amounted to 72,296 rupees, so that there has been an increase in the income of the local funds of 35,913 rupees. Increase under this head.

76. The uncollected balances at the end of the year on account of local funds was 20,185 rupees, of which 4,306 rupees are supposed to be irrecoverable. Uncollected balances under this head.

77. The arrangements consequent on the recent treaty involved the abolition of the Enam Department, and the paucity of officers in the districts has rendered any satisfactory progress in Enam investigations a simple impossibility, demonstrating the urgent necessity of the commission being at all times kept up to its established strength, and of arrangements being made for at once efficiently supplying the place of temporary absentees. Enam Department.

78. The village expenses, which are not included in the demand, amounted in the year 1861-62 to 5,16,011 rupees. Village expenses.

SECTION III.—EDUCATION.

Proposed project of Education.

79. A project for the establishment of certain schools in Berar, to be supported from the local funds, was submitted to Government on the 13th December 1861, it not being considered desirable at present to burden the finances with any large outlay for a comprehensive scheme of education. Our immediate want is that of elementary schools both in English and vernacular.

Interdiction of Expenditure.

80. The interdiction of all expenditure from the public revenues on this account, contained in the Government Despatch No. 6883, of the 23d December 1859, has necessarily retarded the introduction of an efficient system of education in Berar, even upon the limited scale to which it is proposed to confine ourselves; but the more pressing requirements of the districts have received careful consideration, as have also the obstacles which present themselves to the diffusion of useful instruction among a semi-barbarous and suspicious people.

Difficulty to be overcome.

81. One great difficulty has been experienced and remains yet to be overcome, namely, the reluctance common to all indigent agricultural classes with which children are permitted to attend school, when by light labour in the fields, or on the extensive public works in progress, their labour can be turned to profitable account by their parents. A child six or seven years of age can in this way earn from two to three rupees a month, amply sufficient to feed and clothe it; while the same child, if at school, must be maintained by its parents, who are accustomed to prefer a present gain, comparatively small, to future advantage, however permanent or considerable.

Indifference to European Education.

82. Nor is it alone the agricultural classes in Berar (generally Mahomedans and Mahrattas) who are backward in sending their children to our schools. Those engaged in mercantile pursuits (for the most part Marwarries) evince much indifference to the general education of their children. Skill in the Native system of accounts and in the conduct of their commercial transactions, which the parents themselves, or those around them, are eminently qualified to impart, is all of which they as yet recognise the importance. The prospect of employment under our Government will, no doubt, suggest the necessity of more extended qualifications, and the following experimental scheme, recommended by the officiating commissioner, may serve our present purposes, while it may be gradually extended to keep pace with the wants of growing intelligence:—

Present scheme of Education.

83. One English school to be established at each of the two sudder stations, and 12 Mahratta schools in each of the two divisions of Berar, thus allowing one vernacular school for each tehsildaree, and three for location in other large towns; every vernacular school to be divided into two classes, superintended by separate masters. In the lower class the rudiments of the language to be taught, while more advanced pupils are educated in the higher. The fees from each pupil in the English schools to be one rupee, in the higher Mahratta classes four annas, and in the lower two annas monthly. The proposed scale of remuneration to instructors and the cost of the whole scheme are as follows:—

	Per Mensem.	Per Annum.
	Rs.	*Rs.*
2 English schoolmasters	200	
24 Mahratta schoolmasters, at 50 rupees each	1,200	
24 Ditto assistant schoolmasters, at 20 rupees each	480	
TOTAL	1,880	22,560
Books, rent of schools, and other incidental expenses		1,440
TOTAL *Rs.*		24,000

Distinction to be kept in view.

84. When we have provided the means of a practical business-like education, we shall have perhaps done all that it is expedient for us in our present relation towards the inhabitants of these districts to attempt. It may be well to keep in view the distinction between education and instruction. "So long as we are precluded by the peculiarity of our position from directing or materially influencing the social and moral training of those whom we would educate, it may be questioned whether we should not be sowing the seeds of mischief and disquiet by imparting any high degree of merely scholastic and technical instruction."

Schools at Hyderabad.

85. At Chudderghaut there is the Residency Medical School, supported entirely by the Nizam's government. In the city of Hyderabad a madrissa (college) in which there are 24 teachers of purely Oriental languages and sciences, with an English class conducted by Mr. Carey.

86. At

86. At Chudderghaut there are also the Bishop's School, supported and conducted by the Roman Catholic clergy, and a Protestant school, maintained by private subscription. The Bishop's School at Chudderghaut.

87. In the adjacent cantonment of Secunderabad is an orphanage for boys and girls, with which the cantonment school is incorporated, and these with a cantonment school at Bolarum are in addition to the regimental schools always found in the corps of the British army. Schools at Secunderabad and Bolarum.

88. In the medical school above mentioned the natives of the city of Hyderabad are taught up to a certain standard, then furnished with a diploma and employed by the minister in the different districts of the Hyderabad territory. A dispensary is placed under their supervision, and European medicines and surgical instruments are supplied to them at the cost of the Native government. They are at liberty, if they prefer it, to take up private practice in the city of Hyderabad. Medical School at the Residency.

89. This institution has been a great success, and is duly appreciated by the minister, the people at large, and the different graduates who have matriculated there. Its sphere of usefulness has the prospect of being still further increased, as Her Majesty's Secretary of State for India, in his Despatch No. 36 of the 23d March 1861, has highly approved the system upon which it has been conducted, and the exertions of its able superintendents, Doctors Maclean and Smith. Her Majesty's Government is also prepared, it is intimated, to extend to the institution the same measure of support which it received from the Court of Directors of the East India Company. A considerable supply of books, instruments, and other desiderata for the use of the school have been consequently applied for by the Government of India to the Secretary of State for India. Success of this School.

90. As suggested by the Governor General in Council, the proposals of Dr. Fleming, the present superintendent of the medical school, for the establishment of a clinical hospital and dispensary inside the town of Hyderabad, have been recommended to His Highness the Nizam, who has thoroughly entered into Dr. Fleming's views and promised them every support. The only delay at present is in discovering a suitable building which will contain not only the clinical ward, but a pauper dispensary and a lunatic asylum, both of which latter institutions the Minister, Salar Jung, is desirous of establishing at the same time and under the same roof. Proposed Clinical Hospital and Dispensary in the City.

91. At the Bishop's School, the Chudderghaut School, the Orphanage, and the Bolarum Cantonment School, an education equal to that of a good grammar school can be obtained. Examinations are held annually, superintended by competent officers, with whom are associated the different clergymen officiating in the cantonment. Standard of Education in the different Schools.

92. To this enumeration of educational establishments may be objected the obvious want of a regular and organised system of education among them, but the impracticability of its introduction is the result of the schools being maintained from so many different sources, and from their being principally supported by the government of a foreign prince. General defect of the Schools.

SECTION IV.—PUBLIC WORKS.

93. Labour has been in great request at Secunderabad throughout the year. The extensive public works in progress furnish full employment for all the labouring classes, even in a place where they are in general so largely redundant as in Hyderabad. Demand for labour at Secunderabad.

94. But, in addition to local requirements, labourers were sought out here for the works on the Godavery and for the hydraulic works of the Irrigation Company, and the means resorted to eventually by the private agents to procure them amounted to something like the nefarious practice of crimping. On complaints reaching the minister, he directed that all engagements for the exportation of labourers beyond the Hyderabad Territory should pass through his own office; and this, it is believed, has occasioned considerable disappointment to those officers who expected to derive a large supply of labour from Hyderabad by means of private agencies. Exportation of labourers for the Godavery, &c. works.

PART I.—ROADS.

1.—*Nagpore Dâk Line.*

95. The total length of this road is 245 miles, of which 165 miles are in the assigned districts, and 80 miles in His Highness the Nizam's dominions, under charge of the executive engineer, Jaulnah Division. The amount authorised for repairs and improvements in the budget of 1861-62 is 57,100 rupees, besides a sum of 1,000 rupees for improving the Sawergaom Ghaut. 21,472 rupees had been expended to the end of January 1862, and the work is in progress. The ghaut has been much improved by a company of the Bombay Sappers and Miners. Length of the Nagpor Dâk line.

CHAP. XVI.
Hyderabad Assigned Districts.

2.—Feeders of the General Indian Peninsular Railway running through Berar to Nagpore.

Line selected as feeders to the railway.

96. The following lines of road were selected by a committee convened by the Resident at Hyderabad:—

(I.)—Aukolah railway station to Akote, West Berar, about 29 miles.

(II.)—Budneira railway station to Moresee, East Berar, about 39 miles.

(III.)—Sheogaum railway station to Bowenbeer, West Berar, about 24 miles.

(IV.)—Chandpore railway station to Julgaom, West Berar, about 16 miles.

(V.)—Moortoozapore railway station through Duncapore to Unjungaum, East Berar, about 29 miles.

(VI.)—Sheogaum railway station through Kamgaom to Maikur, West Berar, about 48 miles.

(VII.)—Akolah railway station through Pathoor and Bassim to Hingolee, West Berar, about 71 miles.

(VIII.)—Chandoor railway station, east of Budneira, to Koora, East Berar, about 10 miles.

(IX.)—Woon to the Wirdah towards Hingunghaut in the Nagpore Territory, East Berar, about 15 miles.

(X.)—Budneira railway station to Ellichpore Cantonment, East Berar, about 35 miles.

(XI.)—Moortoozapore railway station through Karinjah to Poosud, East Berar about 57 miles.

(XII.)—Chandoor railway station through Tullagum to Woon, East Berar, about 94 miles.

(XIII.)—Budneira railway station through Nair to Paingunga, East Berar, about 76 miles.

(XIV.)—Sheogaum railway station to Ballapore, West Berar, about 8 miles.

Total, 551 miles.

Measures adopted to carry out the lines.

97. The two first were immediately undertaken by order of Government. Surveys, plans, and estimates are being prepared by the executive engineer, Berar Division. In the meantime the lines are being marked and opened out, for which purpose a sum of 26,000 rupees was sanctioned by Government on the 23d of November last, the additional one lac from the one per cent. income tax has also been allotted to these roads.

Contribution from local funds for this purpose.

98. It has been suggested to Government in the budget of 1862-63 that a sum of one lac of rupees be further expended in the ensuing year, from the local funds of the assigned districts, upon marking out and rendering practicable for traffic as many feeders to the railway as possible.

Proposed road from Hingolee to Jaulnah.

99. A road from Hingolee to Jaulnah, distance about 100 miles, within the Nizam's dominions, has also been proposed to be undertaken at the expense of His Highness the Nizam, but nothing definite has yet been arranged.

Road from Hingolee to Woon.

100. The road from Hingolee by Poosud to Woon, on the banks of the Wirdah, is being marked and opened out from the local funds of the assigned districts; this will run into the heart of the south-east part of the assigned districts, and will be of much benefit in opening up the country.

Line from Aurungabad to Nandgaum Railway Station.

101. A most important line from Aurungabad *viâ* Dowlutabad and Manickpoory to Nandgaum railway station, a distance of 56 miles, has been surveyed and marked out by Lieutenant Foord, executive engineer, Jaulnah Division. A sum of 30,000 rupees has been entered in the budget of 1862-63 for rendering this road practicable as soon as possible.

3.—First Class Metalled Road from Toka to Aurungabad, in the Nizam's Dominions, 26 Miles, under Lieutenant Foord, Executive Engineer, Jaulnah Division.

This road in rapid progress.

102. The estimate amounting to 1,12,800 rupees was sanctioned by Government, with an allotment of 50,000 rupees for the year 1861-62. The work was undertaken on contract by Messrs. Hill and Cutts, and is in rapid progress. The road will be completed during 1862-63.

4.—Road from Secunderabad to Nagpore.

Rest houses on this road.

103. The construction of six travellers' bungalows has been proposed on this line between Oodgheer and Keenee, and nine tiled sheds or rest-houses for travellers, at stages 25 miles apart, between Secunderabad and Hingunghaut *viâ* Nirmul, on the Nagpore Road.

5.—Trunk

5.—Trunk Road from Secunderabad to Tanderwaddy, on the Hyderabad and Sholapore Road.

104. This road was commenced about the beginning of 1858, and completed in May 1860. The first section of the line, 62 miles, was executed at an expense of 1,43,602 rupees, on contract, under the supervision of the Hyderabad Public Works Department, but paid by His Highness the Nizam's Government. The second section, 65 miles, was also constructed at the expense of the same Government, by Mr. Marrett, the superintendent of roads. The third section, from Thoorooree to Tandulwaddy, 39½ miles, running through the late Dharaseo Division of the assigned districts, was constructed by the Hyderabad Department Public Works, at an expense of 1,55,000 rupees, which was sanctioned by the Government of India and paid from the revenues of those districts. This road completed in May 1860.

105. There is a mail cart and a bullock transit for travellers running on this line, and bungalows at easy stages. Extensive repairs are going on throughout the whole length, especially in the third section, where the whole road is being macadamized at a sanctioned outlay of 1,49,000 rupees. Mail cart and bullock transit on this line.

6.—Road from Hyderabad to Bellary, viâ Kurnool.

106. This road was commenced in 1856. The total distance from Hyderabad to the Toongabuddra is 122 miles. It was formerly a cart track, running through several miles of thick jungle and rough and rocky ground. A few miles of it only was cleared and lined out in 1856, when, for want of funds the work was suspended. In June 1861 it was ordered to be recommenced, and the entire line was marked out, cleared, and made available for cart traffic as a fair-weather road before the commencement of the present year. It is now being improved, all muddy portions being covered with gravel. The original estimate for this road was *Rs.* 62,084. 2. 9, and 42,000 rupees has been expended up to this date. The estimate, however, did not provide for bridging rivers and nullahs. Condition of this road.

107. There are three bungalows available for travellers on the first 54 miles of this road, and four others are in progress. Bungalows on this road.

7.—Sholapore and Bellary Road.

108. In March 1861 the Postmaster General of Bombay proposed that a portion of this road from Moodanoor to Comply, on the opposite side of the Toongabuddra, and lying within His Highness the Nizam's country to the extent of 41 miles, should be lined and cleared out. Accordingly it was commenced and completed in June following, at a cost of *Rs.* 4,908. 8. The road being the only direct one between Bellary and Sholapore, promises to become one of great importance, and is even now much used by carts in the dry season. During the rains it must be impracticable, as the greater portion of it is over black soil. The portion lying in the Nizam's country cleared out.

8.—Trunk Road from Hyderabad to Masulipatam.

109. The portion within the Hyderabad Territory of this important line is 91 miles. It is practicable for cart traffic at all seasons, and a comfortable bungalow has been erected at every stage. Practicable for cart traffic.

110. Two commodious rest-houses, one at Goordrampilly, 35 miles from Hyderabad, and the other at Sooriapett, 44 miles beyond that, have been provided for soldiers, at a cost of 2,207½ rupees each. The expenditure was met from the Secunderabad Abkarree Fund. Rest-houses for soldiers on this road.

111. At the 67th mile this road branches to Madras. From this point to Warrenpilly, on the left bank of the Kistna, the distance is 45 miles, and the whole length is in good repair. Branch to Madras.

112. These roads are maintained at the small annual cost of 36 rupees per mile. Average cost of maintenance per mile.

113. As it would take up too much space of the limits allowed for this report, and in order that the Government may judge fully of the work done, it seems desirable that the progress reports of the executive engineers of the Berar Division, for 1861-62, should be submitted without curtailment to the Foreign Office, and this has been accordingly ordered. Progress reports of the Berar Division submitted.

PART II.—RAILROADS.

114. The railway through the valley of Berar, with its attendant telegraph, will be opened out, it is expected, in all 1863. In the meantime, as the foregoing details will show, an extensive system of feeders has been laid down, with a view to uninterrupted communication between the railway and the principal marts in Berar, which are at any distance from the line. Railway and telegraph through Berar.

PART III.—MISCELLANEOUS.

115. The Deputy Commissioner's cutcherry at Akolah was finished during the year, and is now occupied by the district establishment. Cutcherry at Akolah.

116. The sites of the large gaol at Akolah and of the smaller one at Oomrawuttee have been finally selected, and the former building will be commenced at once. Sites of gaols.

117. A regular establishment has been entertained for the conservancy of the town of Oomrawuttee, and the same system will be adopted in other large towns as the increase in the municipal fund renders the introduction of the measure possible. Conservancy.

SECTION V.—POST OFFICES.

No change under this head.

118. No changes in the district Post Offices have been reported during the past year.

SECTION VI.—FINANCE.

Military and other establishments in the Nizam's territory.

119. From a memorandum received from the Financial Department in 1861, it appeared that the cost of the military and other establishments in the Nizam's territory, imposed a charge on the British Government of, according to one computation, 47 lacs, and to another 26½ lacs of rupees.

Finance Commission assembled at Hyderabad.

120. To test these computations, and to ascertain the financial position and actual requirements of the Province, a commission was ordered by the Government of India to assemble at Hyderabad, in the month of August last, composed of the Resident, Mr. Temple, and Brigadier Browne.

Result of financial investigation.

121. The following statement exhibits the result of the financial investigation:—

	Rs.	*Rs.*
Net revenue of the ceded districts of Bellary, Cuddapah, Kurnool, &c.	- - -	33,75,000
Present cost of the subsidiary force - - - - - -	50,00,000	—
Proposed reductions, according to military requirements of the Province, as recommended by the Commission.	25,00,000	
Political charges - - - - - - - - -	1,10,407	26,10,407
Surplus in excess of expenditure - - - - - - - -		7,64,593
Revenues of East and West Berar - - - - - - - - -		36,32,686
Civil charges and military charges of contingent - - - - - -		34,67,640
Surplus - - - *Rs.*		1,65,046

Nizam's contribution for all charges in his dominions.

122. In short, a thorough examination of all the sources from which revenue was derived from the Hyderabad State for Imperial purpose proved that the Nizam's subsidy to the British revenue from the ceded districts and assigned territory may be computed, in round numbers, at nearly a million sterling annually of gross revenue; and that His Highness's Government in reality, when the requirements of the Hyderabad territory are alone considered, pays for all establishments, Military, Civil and Political, within his dominions.

Views of the commission.

123. The views of the commission were submitted to the Government on the 13th August 1861, and, with some minor reservations, were generally accepted.

Revenues of the assigned districts.

124. In the Hyderabad assigned districts, during the past year, the Government revenue (excluding Income Tax) collected during the year was as follows:—

	Rs. *a.* *p.*	*Rs.* *a.* *p.*
Land Revenue - - - - - - - - - -	- - -	31,79,296 5 5
Sayer - - - - - - - - - -	- - -	96,401 3 2
Abkarry - - - - - - - - - -	- - -	3,23,584 6 8
Miscellaneous - - - - - - - - - -	- - -	48,045 6 —
TOTAL Land Revenue - - *Rs.*	- - -	36,47,327 5 3
Salt - - - - - - - - - - -	31,429 12 6	
Opium - - - - - - - - - -	33,466 10 4	
Stamps - - - - - - - - - -	70,377 5 6	
Law and justice - - - - - - - - -	13,622 9 9	
Police - - - - - - - - - -	8,494 - 1	
Miscellaneous - - - - - - - - -	16,761 1 7	
Public works - - - - - - - - -	217 9 —	
		1,74,368 15 9
TOTAL Collections - - *Rs.*		38,21,696 5 —

125. The

125. The revenue last year was *Rs.* 29,61,722. 3. 9., and the newly-acquired talooks were valued at *Rs.* 7,72,397. 10., giving a total revenue of *Rs.* 37,34,119. 13. 9. There has been, therefore, an increase in 1861-62 of *Rs.* 87,576. 7. 3., and this in the face of taxes relinquished in the new talooks to the extent of *Rs.* 46,895. 14. 7., and of the necessity of introducing a liberal settlement in them, of which the full benefits can only gradually be developed.

Revenue compared with last year.

126. The disbursements on account of the Civil Administration have been, during the year, as follows:—

Civil charges.

	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*
Salaries of officers	-	-	-	84,748	4	4
Salaries of Establishments including police	-	-	-	3,32,610	15	2
Contingencies	-	-	-	64,037	13	9
				4,81,397	1	3
Revenue survey	60,000	-	-			
Yeomeahdurs	12,739	4	3			
				72,739	4	3
			Rs.	5,54,136	5	6

127. A surplus thus remains of *Rs.* 32,67,559. 15. 6. for the pay of the contingent, public works, and the other purposes for which the country was assigned to British management. The departmental accounts, exhibiting the actual disbursements under these heads have not all to this date reached the Resident's office; but according to the budget estimate for the year 1861-62, corrected by the actual disbursements hitherto ascertained, these charges will amount to 34,38,665 rupees. leaving, as the surplus of receipts over expenditure for the year under review, 3,83,031 rupees.*

Surplus revenue.

128. With this rapidly increasing revenue the debt against His Highness the Nizam, which on the 30th of April 1860 amounted, according to the Accountant General's statement, dated the 30th of November 1861, to *Rs.* 5,35,937. 1. 8., must be soon extinguished.

Debt against the Nizam.

129. The accounts for the year 1860-61 have not yet been received from the Accountant General at Calcutta; but according to the financial statement appended to the administration report of the Hyderabad Assigned Districts for that year, the actual receipts in 1860-61 were 42,18,257 rupees, the actual disbursements 41,83,369 rupees, leaving a balance for that year in favour of receipts of 34,888 rupees.

Financial result of 1860-61.

130. This sum deducted from the balance of the previous year against His Highness the Nizam, together with the excess of receipts over expenditure for the present year, will diminish the debt against the Nizam's Government on the 30th of April 1862 to 2,92,048 rupees, as particularised in the margin.

Diminution of the debt against the Nizam.		*Rs.*
Balance against the Nizam on the 30th April 1860	-	5,35,937
Deduct excess of receipts over expenditure in 1860-61	34,886	
„ excess of receipts over expenditure in 1861-62	3,83,031	
		4,17,917
Balance	*Rs.*	1,18,020

131. The whole amount of taxes remitted in the Berar Districts, since their management was assumed by British officers, is *Rs.* 3,85,356. 13. 6., as shown in the accompanying Schedule, Appendix No. 2.

Taxes remitted in the Assigned Districts.		
Add interest on debt from 1st of May to 31st December 1860, not charged in disbursements exhibited above for 1860-61, pending the orders of Government	-	1,74,028
Balance against the Nizam on the 30th April 1862	*Rs.*	2,92,048

132. A great scarcity of copper coin has been experienced in Berar, notwithstanding that in the year under report 1,26,000 rupees' worth has been imported from Madras, and 75,000

Scarcity of copper coin.

		Rs.
* Disbursements according to Budget Estimate for 1861-62		34,70,494
Deduct over-estimated in Budget for Hyderabad Contingent	*Rs.* 30,568	
„ „ for Yeomeahdars	1,261	
		31,829
		34,38,665
Deduct salaries, establishments, &c., as in preceding paragraph		5,54,136
		28,84,529
Surplus revenue above shown		32,67,560
Estimated surplus for the year of receipts over expenditure	*Rs.*	3,83,031

75,000 rupees worth on a former occasion. The scarcity still seems to remain, and all classes complain that they receive only from 14 to 15 annas in copper coin for the rupee. Steps, however, have been taken to remedy the evil so far as an abundant importation of copper coin is calculated to do so. Its exportation from the districts by the Sahoocars is the chief obstacle to be surmounted.

Total Administrative Charges.

	Rs.
Civil charges, as shown by the Commissioner	4,81,397
Salaries, &c., Residency Civil Office	31,631
TOTAL	Rs. 5,13,028

133. The total charges on account of civil administration and police throughout Berar are 5,13,028 rupees, being a per-centage upon the gross revenue, 38,21,696 rupees, of *Rs.*13. 6. 9.

SECTION VII.—MISCELLANEOUS.

PART I.—AGRICULTURE.

Cotton cultivation.

134. Experiments with the view of introducing exotic cotton have been continued, but still without success. These experiments will be persevered in, while efforts will be made to improve the native staple by more careful cultivation.

Essentials for obtaining cotton for home market.

135. But it has become evident that if cotton adapted for the home market, equal or nearly so to American produce, be expected from Berar, the cleaning and ginning must be conducted by different agency to the culture.

Object of the cultivators.

136. The cultivators' object is to obtain a quick return for his crop: it is, therefore, a matter of great indifference to him whether his cotton is clean or full of seed, leaves, and gravel, so long as it meets with a quick sale.

Cultivator unable to clean cotton.

137. It seems doubtful, even if he had the inclination, whether he has the time thoroughly to clean his cotton. Other agricultural avocations of vital importance to his land demand his attention and labour, and it is a common remark among the ryots that they have no spare time, and that the seasons already come round too fast. In short, the higher price he might obtain for cleaner cotton would not pay him for the extra labour and the neglect it would entail on other matters connected with his farm.

Remedy for this drawback.

138. The remedy is obvious. The exporting merchants must have on the spot, in the cotton districts, agencies, storehouses, gins, screws, and packing machinery, merely purchasing his crop from the cultivator. Of the remunerative result there can be little doubt, and another most beneficial effect will be that the cultivator will be no longer in the power of the grasping village money-lender and extortionate middlemen, as at present. It is believed that such an agency has already been established at the Railway Station of Budneira, and it is to be hoped that others will speedily follow.

PART II.—SURVEY.

Progress of the revenue survey.

139. The Revenue Survey has been pushed on as rapidly as the funds at the disposal of the Department would permit.

Extent of land measured.

140. During the year 601,933 acres have been measured.

Number of fields, classed.

141. Revenue survey fields, 10,756, comprising 186,450 acres, have been classed.

Settlement introduced.

142. The settlement has been introduced into 70 villages, containing 107,144 acres. The realised revenue of these 70 villages in 1860-61 was 74,367 rupees. In the present year, under the survey settlement, not less than 95,000 rupees will be realised, an increase in the revenue of 20,633 rupees, or 28 per cent.

Average cost of measurement and classification per acre.

143. The average cost of measurement on the operations of the year ending 31st of October 1861, with which date ends the survey year, was 1*a.* 9¾*p.* per acre, and the cost of classification 5½*p.* per acre, giving 2*a.* 3¼*p.* per acre for the whole operation, including settlement.

Hindrance to work from fever.

144. All the field establishments have, it is stated, suffered much from fever in Berar during the year, and considerable hindrance to the work has been experienced from this cause.

Tenure of waste lands

145. A proposal made by the Officiating Commissioner, Hyderabad Assigned Districts, has been sanctioned by the Governor General in Council, for waste lands in the Southern Talooks

Talooks of East Berar, being leased out for 10 years without any intermediate modification of terms. His Excellency also concurs with the Resident in thinking that it will be advisable to grant leases at low and fixed rents for 10 years certain to persons who are willing to take up waste lands or deserted villages, which are not likely to be reached by the Survey much before the expiry of that term.

Terms of the Leases.

146. The kowls (leases) will be drawn up so as to give a reasonable security to the tenants, that those who lay out capital on the lands will be permitted, at the end of the 10 years, to continue in occupation on payment of a fair rent.

PART II.—VACCINATION.

Vaccination re-established in restored Districts.

147. It is satisfactory to observe that vaccination has recently been re-established in the districts restored to his Highness the Nizam by the treaty of 1860.

Temporary cessation of Vaccination in restored Districts.

148. While these territories were under the administration of the British Government, vaccination was a regular operation in each district; but on their transfer to the Native Government, the vaccine establishment was discharged and the operation ceased.

Re-establishment of the prophylactic at the Minister's desire.

149. In the course of the first year the Minister expressed a wish to re-establish the system which has accordingly been done, so that the ground gained in this matter during British administration, instead of being lost, has been re-occupied and adopted as a basis for further prophylactic operations.

Vaccination in the Assigned Districts.

150. In the assigned districts of Berar four vaccinators have been employed—during the year 557 children were vaccinated, and 435 cases were successful. The accompanying tabular statement (Appendix No. 3) will show in detail the numbers vaccinated throughout the Hyderabad territory from 1st May 1861 to 30th April 1862.

CONCLUDING REMARKS.

Time required for perfecting the administration.

151. It has been somewhere remarked that the administration reports of the Indian Local Governments and administrations must necessarily be eulogistic. It may with more truth be said of those who minutely criticise them in a hostile and carping spirit, that nothing is easier than to find fault. The oldest and most perfect Governments are not brought to perfection in a day, but after a long series of trials and experiments, and during many years of anxious practical investigation. Why then should so much, and so immediately, be expected from Indian administrators amidst a population antagonistic in their social and religious relations to European customs?

Present Government appreciated by the people.

152. It cannot but be a matter of congratulation and of credit to the members of the Hyderabad Commission, that the anarchy and oppression existing in the Nizam's Berar districts eight years ago have now, under the unwearied exertions of British officers, almost entirely ceased; and that a Government, however imperfect, but still of material and progressive improvement, has been established, which is pointed to by the people as equitable, beneficent, and providing for the security of person and property, while it is acceptable to all classes, because it has the welfare and happiness of all as its primary object.

Services rendered by the several Officers.

153. Whatever may be the hereafter of the Nizam's assigned districts of Berar, or under whatever Government they may be placed, it must be a matter of no little satisfaction and honest pride to the officers who have conducted the administration thus far, that the rough edge of anarchy was, in the first instance, removed by their zeal and energy, and that they were the primary agents who introduced order into the administration.

Their names prominently brought forward.

154. It is not probable that the writer of the present report may submit another on the same subject to the Government of India; and while fully impressed with many shortcomings of the administration, he feels that he would be forfeiting a pleasing privilege and neglecting an imperative public duty were he to omit this the last opportunity of placing prominently on record the names of those officers to whose instrumentality the successful conduct and results of the administration are eminently and entirely due.

RESIDENT'S OFFICE.

Commendation of Major Thornhill.

155. Major Thornhill, assistant resident, has, during the last six years, with only a short respite as secretary to the Commission, conducted all the various and multifarious duty connected with that office with the greatest tact and unvarying assiduity and ability.

Mr. George Boswell, a most valuable Officer.

156. Mr. George Boswell, extra assistant, as the head executive officer in the resident civil office, has had most onerous and responsible duties to perform, in which he has proved himself second in ability to no one, and is a most valuable officer of Government.

DISTRICT OFFICERS.

Captain Cadell deserving of the favourable consideration of Government.

157. Captain Cadell, Deputy Commissioner, West Berar, and Officiating Commissioner has brought all the practical ability of a naturally sagacious mind to bear on his duties in the Commission, and well deserves the favourable consideration of Government for the manner in which he has officiated as Commissioner.

Commendation of Captain Allardyce.

158. Captain Allardyce, Deputy Commissioner, East Berar. The duties of taking over the newly assigned districts, after the Treaty of 1860, devolved on this officer, and they were excellently performed with unrelaxing industry and complete success.

Favourable mention of other Officers.

159. Captain Stubbs, Assistant Commissioner, Officiating Deputy Commissioner, West Berar -
Lieutenant Bell, Assistant Commissioner, East Berar, on sick leave to Europe - - - -
Captain Bushby, Assistant Commissioner, Officiating Deputy Commissioner, East Berar - -
Mr. C. Hodern, Assistant Commissioner, West Berar - - - - - - - - -

Are all officers of zeal and ability, and deserving the commendation of Government.

Extra Assistants.

Favourable notice of the Extra Assistants, &c.

160. Mr. Bymanjee Jamasjee - - - -
Mr. C. Davies - - - - - -
Mr. Seeta Ram Row - - - - -

Are industrious, zealous and painstaking officers, ever desirous to do their duty properly.

Superintendent of Police.

Captain T. Davies - - - - - -

Commendation of Major Anderson.

161. The supervision of the survey has been entrusted to Major Anderson of the Bombay Revenue Survey, who has proved himself not only an excellent surveyor, but an officer of most varied attainments, and thoroughly acquainted with the wants of the people, and what is due to the interests of Government.

Dr. Fleming's deep interest in his duties.

162. Superintendent of Hyderabad Medical School.—Dr. J. B. Fleming became Superintendent of the Medical School on the resignation of Dr. George Smith, and has shown deep interest in his duties, and already attached the pupils to his person by his conciliatory manners resulting from a deeply cultivated mind.

PUBLIC WORKS DEPARTMENT.

Captain Tyrrell a most zealous officer.

163. Captain Tyrrell, Executive Engineer.—A most zealous and hard working executive engineer.

Notice of Captain Francis.

164. Captain Francis, Assistant Engineer.—A most earnest and laborious officer.

Notice of Lieutenant Haldane.

165. Lieutenant Haldane has proved himself an excellent and hard working officer, who does not fear exposure in a malarious district, having been employed in laying out the district roads between Hingolee along the banks of the Paeen Gunga to Woon.

Good service of Officers who have left the Commission.

166. The experienced and eminent abilities of Mr. F. N. Maltby, Mr. C. B. Saunders, Mr. T. H. Bullock, Captain Meadows Taylor, and Major Ivie Campbell (who died at his post), ought not to be forgotten in this record of excellent and approved services of the officers of the Hyderabad Commission, although they have all ceased to form a portion of it.

Cuthbert Davidson,
Resident.

Resident's Civil Office, Hyderabad Residency,
27 June 1862.

N°221. - 1 Ordered, by the House of Commons, to be printed, 15 May 1863.

APPENDICES to the REPORT on the HYDERABAD ASSIGNED DISTRICTS, for the Year 1861-62.

APPENDIX, No. II.

APPENDIX, No. V.

No. 10 of 1862.—Civil Department.—Revenue.

From Major *A. R. Thornhill*, First Assistant Resident, in charge Hyderabad Residency, to Colonel *H. M. Durand*, C.B., Secretary to the Government of India, Foreign Department, Fort William; dated Hyderabad, 4 August 1862.

Sir,

ADVERTING to Section VII., Part II., "Survey" of the Resident's Administration Report for 1861-62, I beg to submit the accompanying copy of a letter No. 219, dated the 26th July 1862, from Major Anderson, Superintendent of Revenue Survey, communicating the correct result of the introduction of the new settlement in the 70 villages as compared with the year 1860-61.

2. Major Anderson's letter has only this day reached me.

From Major *W. C. Anderson*, Superintendent of Revenue Survey, S.M.C., to the Assistant Resident, Hyderabad,—No. 219, dated Dharwar, the 26 July 1862.

BY letter No. 179, dated 10th ultimo, paragraph 5, I reported that the realized revenue of the 70 villages into which the survey settlement has been introduced "was in 1860-61, 74,367 rupees. In the present year not less than 95,000 rupees will be realized, an increase in the revenue of 20,640 rupees, or 28 per cent. There is in addition Government unoccupied waste bearing assessment 13,807 rupees, out of which some is being taken up daily. I have, therefore, above stated the current year's revenue to be not less than 95,000 rupees, it may possibly be a thousand or two more than that, for my last return was dated the 15th ultimo, (May), and then the taking up of waste land had by no means ceased. I have little doubt that, before another three years elapse, at least two-thirds of the present waste, assessed at 13,807 rupees, will have been taken up, and the revenue have increased to at least 1,05,000 rupees, or upwards of 41 per cent. on the realization of 1860-61.

2. I have now received returns up to the 5th instant, and find that I have, in the passage above quoted, very much over-estimated the time required for the bringing the unoccupied Government waste, amounting on the 20th May to land assessed at 13,807 rupees, into occupation. Out of this amount, since the 20th May and up to the 5th instant, land assessed at 11,715 rupees has been taken up, and only 3,101 acres, bearing assessment 2,092 rupees, remained on the latter date unoccupied waste.

3. The following Statement shows the result of the settlement in the 70 villages compared with the realizations of 1860-61:—

	Rs.
Realizations of 1860-61 - - - - - - -	74,367
Survey Assessment of Government land occupied up to the 5th instant, after deducting 2,056 rupees, to be remitted in the present year on account of unexpired Kowls granted before the settlement - - -	1,06,824
Increase of revenue in 1862-63 - - -	32,457 or 43 per cent.

4. Still some small amount of the waste remaining, 3,101 acres, bearing assessment 2,092 rupees, may be taken up in the current year. But at the late period of the season I cannot anticipate that any material extent of it will be taken up. The above figures, therefore, show pretty nearly the result of the settlement of the current year. In future years I doubt not that the small area of waste will be still further diminished, and the revenue will also benefit by the full assessment on lands at present held under Kowls, as they fall in year by year.

5. I will send in an exact Statement of the revenue result of the settlement when the accounts for 1862-63 are finally made up. I hasten, however, to communicate the above result, which has even exceeded my most sanguine anticipations, in the hope that it may be in time for embodiment in the administration report.

No. 1747.

FORWARDED to the Home Department in continuation of No. 1572, dated the 6th ultimo. (To be returned.)

By Order,
(signed) *J. T. Wheeler*,
Asst. Secy. to Government of India.

Foreign Department,
6 September 1862.

ANNUAL REPORT on the ADMINISTRATION of the STRAITS SETTLEMENT, for the Year 1861-62.

SECTION I.—JUDICIAL.

PART I.—CIVIL JUSTICE.

1. THE introduction of the system under which the members of the court establishment are now remunerated by suitable fixed salaries, all fees being duly accounted for and carried to the credit of the State, has had the anticipated effect of reducing to a considerable extent the labours of the Judges of the Supreme Court; both at Singapore and Malacca there has been a material diminution in the amount realized from suitors, whilst at Penang it has dwindled down to about one-half the sum received in 1860-61, and is insufficient to cover the disbursements from the Treasury on account of the pay of the Registrar and his clerks.

2. The number of cases decided in the different Courts of Requests is in excess to that of last year, whilst the amount received by fees is somewhat less, hence it would appear that the modification of the Rules under which fees were originally levied, has had the desired result of diminishing unnecessary and vexatious litigation, and barring the advancement of fraudulent claims, few cases being now filed, in which recourse to the court is not absolutely necessary to ensure the liquidation of a just demand.

3. The advantages of the District Courts are fully appreciated by the Chinese residing in the interior, and even amongst the Malays they are becoming popular, no less than 257 cases having been filed during the 12 months at the District Court of Aloor Gajah in Malacca.

PART II.—CRIMINAL JUSTICE.

1. There have been only two cases not included in the Police Report of sufficient moment to require any special remark.

One occurred at Singapore: Three junks, strongly suspected of having been concerned in some of the piracies reported to have taken place in the Gulf of Siam, were arrested by order of the Government, and the necessary proceedings taken against them in the Supreme Court under the provisions of Act XII. of 1857. The Court, however, was of opinion that there were no sufficient grounds to warrant their condemnation, and they were therefore released. Subsequently, however, there has been reason to believe that the opinion formed by the police as to their real character may have been correct, one of the number having been recognised as a junk that had been captured and carried away by pirates in the China Seas.

2. The

2. The other was that of a Malay who had been implicated in a gang robbery at Batu Kawan, in Province Wellesley, and having been closely pursued by the police, had sought refuge in the Perak territories; he had, however, barely crossed the Krean River when he was overtaken by one of his pursuers, whom he mortally stabbed. He was subsequently apprehended, but the murder having been committed beyond the frontier, it was necessary that he should be committed for trial under the provisions of Act I. of 1849. On the case, however, being laid before the Grand Jury, doubts were entertained as to the prisoners being amenable to the jurisdiction of the Court, owing to a supposed informality in the order directing his being brought to trial, and, after reference to the Honourable the Recorder, the Bill against him was thrown out; he was, however, tried on the minor charge, convicted, and sentenced to 15 years' transportation.

PART III.—POLICE.

1. Since the changes in the police at Singapore, alluded to in the last Administration Report, the conduct of the force appears to have been satisfactory.

2. Several of the new stations and barracks along the Old Straits have been erected almost entirely by the labours of the peons attached, and their construction reflects great credit upon all concerned. During the period of their being thus employed, as they would have experienced considerable difficulty in obtaining food, they were, as a temporary indulgence, permitted to be furnished with rations at the expense of the State.

3. The alterations and additions to the main station in the town having been completed, the Commissioner's and Magistrate's Offices have been removed from the building formerly occupied as a police office.

4. At Penang the conduct of the police force has been generally exemplary, there being, however, one serious exception, that of a subadar on duty at the main station, and employed in the collection of fines imposed by the magistrate, who absconded with the sum of 68 dollars, which had been entrusted to his charge; he was subsequently apprehended, brought to trial, convicted and sentenced to one year's imprisonment in the House of Correction.

5. Consequent on a representation made to the Rajah of Quedah as to the necessity of his adopting suitable measures to preserve the peace of the frontier, and prevent his territories from becoming the resort of the bands of plunderers, by whom Province Wellesley has been so long infested, the border jungles have ceased to afford a refuge to delinquents of this description, and there has not been a single case of gang robbery in the province throughout the year.

6. The tranquillity of Prince of Wales's Island has been disturbed on several occasions, owing to the disputes between rival Chinese Secret Societies. In August there was a serious disturbance between the Tuah Peh Kong and Chin Chin Societies, which lasted for 15 days, during which time a number of cowardly assaults and outrages were committed. In April a similar quarrel occurred between the Tuah Peh Kong Society on the one part, and the Ho Seng and Ghee Hin Societies on the other; it was not of so long duration as the former, the contending factions having made up their differences in the course of a week. On both occasions recourse was had, with great success, to the expedient of appointing the acknowledged heads of societies as special constables, and attaching them to police stations, so as to induce them to take a warm personal interest in the preservation of the peace. By a steady persistence in this course, it is hoped that these unseemly displays of resistance to the law on the part of the Chinese may be permanently suppressed.

7. The pretensions of the Kling Societies have also experienced a severe check, and their fraternities are consequently rapidly falling into disrepute and insignificance.

8. Owing to the construction placed by the Court on the wording of Section 4 of Act XIII. of 1856, under which it has been ruled that the Deputy Commissioner of Police is not competent, on his own authority, to receive a gambling information, and issue a warrant thereon, the exertions of the police to check the crime of gambling have been somewhat nullified, as the publicity given to the transaction by the informer's being obliged to attend upon the Commissioner, who is also the Resident Councillor of the Station, often deters him from giving information, whilst even when it is afforded it renders the prospect of apprehending the offenders less certain, more especially as the gaming-houses being all strongly barred and fortified, entrance can in many cases only be obtained through stratagem, the provisions of Act XXXVIII. of the 17 & 18 Vict. not being applicable to the Straits.

9. Great complaints have been made relative to the rapidly increasing number of lepers by whom the Station is infested, the poor-house apparently not affording sufficient space for their accommodation.

10. Owing to its numerical inefficiency, and to its being under-paid, the state of the police force at Malacca continues unsatisfactory. Out of the town police, num-

bering 112 of all ranks, there have been 44 dismissals and 42 resignations within the year.

11. The services of the Deputy Commissioner have been fully engaged in visiting the country and frontier stations. The European Inspector has, as usual, given great satisfaction; a small increase has been made to his salary. The native officers have generally behaved well.

12. Although as detectives the frontier police have not proved successful, as a preventative to crime the establishment of the force has been attended with great advantage, not a single case of buffalo stealing or kidnapping having occurred since the occupation of the frontier stations.

13. The returns (included amongst the Appendices) furnished by the Commissioner of Police show an increase of crime at all three stations. It appears, however, somewhat doubtful whether this result is to be attributed to an actual increase in the number of offences committed, or to the increased accuracy of the returns now supplied.

14. At Singapore the increase has taken place entirely under the heads of "Larceny" and "Police Cases." In serious crimes there is a very considerable decrease.

SINGAPORE.

Arson.

15. There have been two cases of arson; the one case was that of a Chinese Bangsal at Chan Chu Kung, which was reported to have been set on fire by a party of four Chinese, and property of considerable value destroyed; the alleged offenders were arrested, but the case was dismissed after a lengthy investigation; it is supposed that the complaint was preferred owing to a dispute regarding some land. The other case occurred in the district of Saletar, a quarrel having taken place between two Malays regarding a house, one of the disputants, rather than surrender the property, set fire to it; the case was brought before the magistrate and dismissed.

Assault.

16. Three hundred and twenty cases of assault have been reported, many of them, however, have been mere petty quarrels, whilst the statements made with regard to the less of property must be received with suspicion, complainants often adding an accusation of robbery to render the charge more serious.

Breaches of trust.

17. Of breaches of trust the cases have been of a trifling character, calling for no special remarks.

Bribery.

18. The four instances of bribery have been simple cases, in which a few cents have been offered by prisoners to police peons to secure their release.

Burglary.

19. Out of 20 cases of burglary brought before the magistrate 13 were dismissed, seven being sent for trial at the criminal sessions, of these three only require notice. The first occurred in the house of a Portuguese woman residing in Waterloo-street; her room was entered during the night by a discharged servant, and jewellery to the value of 50 dollars carried off; the burglar was, however, arrested the same morning by the police, and being committed before the Supreme Court, was sentenced to 18 months' imprisonment in the House of Correction. The second was perpetrated in the house of a dyer, in South Canal Road; the adjoining house being vacant, the burglar, a Chinese, obtained means of entrance by removing a portion of the brick partition, and carried away property worth about 140 dollars; he was, however, apprehended with the stolen property in his possession by one of the night watchmen in another part of the town, and the necessary conviction having been obtained, was awarded 14 years' transportation. Several persons were concerned in the third; a Portuguese woman residing in Bencoolen-street was awakened by hearing a noise in her room, and on giving the alarm observed one of the burglars jumping out of the window; on examination it was ascertained that ornaments valued at 49 dollars had been stolen; through the exertions of two detectives it was discovered that a gang of robbers were located behind the race course, and on the necessary search being made the whole of the missing property was regained; five Chinese were committed for trial, one only being convicted and sentenced to seven years' transportation; the others were, however, convicted on a charge of having fraudulent possession of some property belonging to the Court Interpreter, and a resident of Brass Bassa Road, and punished by six months' confinement with hard labour.

Child stealing.

20. There have been two cases of child stealing; in the one a little girl, the daughter of a Malay woman, was carried off by a Chinaman, and disposed of by him at Rhio; she was, however, through the aid of the Dutch authorities recovered, and the culprit was transported for seven years. In the other, a Hindoo child was taken away by one of the performers attached to a native theatre; he was, however, arrested when on his way to Malacca with the child in his possession, tried, and imprisoned for 18 months in the house of correction.

Conspiracy.

21. There has been only one case of conspiracy, in which a fraud was perpetrated on a Portuguese, by which he was deprived of a valuable piece of land; the plans of the conspirators were so well arranged that the suspicions of the victim were not aroused until

the

the fraud had been completed, and one of the parties concerned had absconded; three persons were implicated, one was admitted to bail by the magistrate, and secretly left the settlement, forfeiting his recognizances; the other two were convicted and sentenced to 18 months' confinement with hard labour.

Cutting and wounding.

22. Ten cases of cutting and wounding were sent up for trial at the criminal sessions, the first was the result of a quarrel regarding a woman, weapons were resorted to, and the complainant received three wounds, not however of a serious nature; the offender was imprisoned for six months in the house of correction, and called upon to give security for his good behaviour for three years. In the second, the alleged perpetrator was discharged. The third was that of a Government peon, who charged another Kling, of whom he was jealous, with having cut his throat; his statement, however, was not credited by the jury, who, from the medical testimony, considered that the wound had been inflicted by his own hand, and the prisoner was consequently released. The fourth offender was an old Kling, who, in a fit of jealousy, attacked a woman with whom he had cohabited, inflicting upon her several severe wounds; her life was at first despaired of, but she recovered, and her assailant was punished with four years' incarceration in the house of correction. The fifth arose out of a quarrel between two Chinese coolies employed under a road contractor, regarding their implements of labour, one struck the other with a parang (Malay knife); as he had, however, received great provocation, his punishment was limited to one month's imprisonment with hard labour. The sixth was of a serious nature; it had its origin in a bad feeling existing between two Chinese members of a Christian and a Ghee Hok Society; the Christian was wounded in the abdomen; after considerable difficulty, a large body of the police being for some days detached on the duty, the culprit was apprehended, and sentenced to transportation for 15 years; the Honourable the Recorder taking the opportunity of causing intimation to be given to the Chinese residents at Serangoon, in which district the crime had been committed, that such offenders would always meet with severe punishment. It is hoped that this warning will have a beneficial effect. The seventh occurred in the course of a series of petty disturbances between two Kling factions, the one being composed of the boatmen or red flag men, and the other of all the bad characters and prostitutes of Campong Glam, under the leading of a time-expired convict. In one of the numerous fights that took place wounds were inflicted, two of the rioters were captured and committed by the magistrate to the house of correction for three months. They were afterwards, on another charge of assaulting and wounding, brought to trial before the Supreme Court, but as it appeared that the second offence had been committed at one and the same time as the first, for which they had been punished, they were discharged, being bound down on their own personal security for one year. The remaining cases were connected with a Hoey difference between the Seh Tan and Seh Lim tribes; the feud, however, having been amicably settled, when the cases was called on for trial the prosecutors failed to appear, and the prisoners were accordingly released.

Forgery.

23. Only one case of forgery has been reported, in which, on the matter being investigated by the magistrate, the evidence adduced in support of the charge was of so unsatisfactory a nature that a fine of 50 rupees was inflicted on the complainant as a punishment for the malicious prosecution of the defendant, to whom the amount was paid.

Gambling.

24. Although the police deserve credit for the numerous cases of gambling, more especially those in contravention of Act V. of 1844, they have brought to notice, there seems little doubt that the vice is still extremely prevalent; the offence is one upon which it is generally extremely difficult to secure a conviction, whilst the remuneration that may be granted to informers from the Police Fund being very small, they often find it more profitable to watch the police than to assist them.

Housebreaking.

25. The few charges under the head of housebreaking have been mere cases of larceny, and have been all summarily dealt with by the magistrate.

Larceny.

26. Of the 2,778 cases of larceny recorded, the majority have been committed by house servants. The Hylam Chinese are generally employed as servants; they are perhaps more addicted to theft than any of the other Asiatics in the Straits, and enjoy greater opportunities of obtaining access to valuable property. The provisions of Section 4 of Act XLVIII. of 1860 have been found to work beneficially in preventing the escape of offenders, when the property stolen from temporary residents has exceeded 50 rupees in value. Sixteen persons, charged with larceny, were committed for trial at the criminal sessions, ten were discharged, the remaining six being convicted and sentenced, one to transportation, and five to imprisonment for various periods in the house of correction.

Manslaughter.

27. Three cases of manslaughter have been noted; two occurred from furious driving; in the third instance the charge was brought against the architect and contractor of a range of new buildings, which, in the midst of a violent squall, fell to the ground, burying one of the workmen under the ruins. The Bill was thrown out by the Grand Jury.

Murder.

28. There have been six cases of murder, being the same number as recorded last year. The first was that of a Chinese sawyer working in the country, who was supposed to have been murdered by his master, though no cause for the crime has hitherto been discovered. Intimation of the deed did not reach the police until three days after its occurrence, when the body was exhumed; three men were arrested on suspicion, but discharged, consequent

on the want of sufficient evidence against them. The second was that of a burglar, who met his death at the hands of three Kling men, who were attempting to arrest him; the circumstances of the case did not, however, warrant a conviction on the charge. In the third the victim was a woodcutter, who, whilst employed with two other Chinese in cutting wood near Pulo Samboo, was attacked by some Malays, with the view of plundering his boat; the deceased, having offered resistance, was speared in the abdomen, and died before reaching Singapore; two Malays were arrested, but the evidence was not considered sufficient to substantiate the charge against them, and they were discharged. The fourth case was one of a peculiarly painful nature: a Malay fishing boat having approached a merchant vessel lying in the roadstead, the commander, under the impression that she was hovering about for the purpose of taking off some of his crew, fired two shots from a musket at the fishermen; one man was seen to fall into the sea, and another was wounded in the leg; the body of the first not having been recovered, the charge for wilful murder was not sustained; but as regards the second offence, shooting with intent to do grievous bodily harm, the prisoner was convicted and sentenced to penal servitude for six years. In the fifth instance the culprit was a Malay residing near Saletar; in a fit of passion he murdered his father-in-law and wounded three women; before the arrival of the police, he was placed under restraint by his relatives, who bound him so tightly that he subsequently died in hospital from the effects of the injuries he received. The last murder committed was on the person of a Chinese hawker, who was selling his wares on the Rochore River, behind Tanjong Rhoo; his death was caused by a severe blow on the head; no clue to the murderer has as yet been obtained.

Perjury.

29. Under the head of perjury there are only two cases deserving of notice; in one, two Klings, members of a secret society, committed wilful perjury before the police magistrate; they were committed for trial at the sessions, and sentenced to twelve months' imprisonment in the house of correction. In the other a Kling contractor, who had brought a false charge of assault against the commissariat conductor, was accused of subornation of perjury; a true bill was found by the grand jury, but owing to the magistrate having neglected to have the depositions in the original case duly signed, no further proceedings were taken.

Piracy.

30. Only four cases of piracy appear on the returns, and this crime, as regards the immediate neighbourhood of Singapore, appears to have been in a great measure suppressed. This result may be attributed to the energetic conduct of the police authorities, who, aided by his Highness the Tumongong, have strenuously exerted themselves to clear the adjacent seas and straits from the marauders, by whom they were formerly infested. Two of these pirates, who had long been the terror of peaceable traders, Pah Ranti and Si Abboo, were so harassed by the continued pursuit of the police, on two occasions their boats being captured, that they eventually surrendered to a petty native chief subordinate to the Government of Netherlands India.

Rape.

31. One case of rape occurred; it was perpetrated on a Chinese girl of eight years of age; the offender was tried and punished by 18 months' imprisonment, with hard labour.

PENANG.

Arson.

32. At Penang eight cases of arson have been reported; only one, however, is deserving of remark. A Chinaman attempted to set fire to the house of a police Kling informer, by lighting a large kind of squib immediately under it; this, however, exploded, and the Chinaman was so burnt, that he died the next day from the effects of the injuries received.

Assault.

33. In comparison with the returns of last year, there has been a slight decrease in the number of assaults; a large proportion of the cases noted have arisen out of the quarrels between the members of the different secret societies, and many are of the most trivial nature.

Breaches of trust.

34. There have been 19 cases of breaches of trust, and property to the value of 3,435 dollars is alleged to have been made away with; two cases, however, involving a sum of 2,636 dollars were brought before the magistrate, and dismissed as frivolous complaints.

Bribery.

35. Of bribery there have been five cases, but only two of any importance: in the first a Chinaman was accused of offering a dollar to a police jemadar to grant his release; the bill was thrown out by the grand jury; and in the second a Chinese nakodah offered the Deputy Commissioner 40 dollars to restore some arms that had been seized by the police; the offender was sentenced to six months' imprisonment in Her Majesty's gaol, and to pay a fine of 40 dollars.

Burglary.

36. Although 173 cases of burglary have been recorded, only five have been of any magnitude. The first case requiring mention occurred in Penang-street; the thieves got over the back wall of the court-yard attached to the house, and broke into a store-room containing opium, by cutting away the two wooden bars of the window; they removed the contents of an entire box, valued at 1,250 dollars, without disturbing any of the inmates of the house. This was evidently a skilfully planned robbery, and the opium must have been at once shipped on board some native vessel; several men have been arrested on suspicion, but discharged for want of proof against them. In the second, the thieves clambered for a considerable distance along the roofs of the adjoining houses, and then lowered

lowered themselves into a court-yard by sliding down two strong poles which were tied together, and which they must have brought with them; they carried off property to the amount of 60 dollars, and made their exit by the front door without being perceived; no clue has been obtained to the perpetrators of this robbery. The third house plundered was a jeweller's shop in Penang-road: the thieves entered by making a hole in the brick wall, close to the back door, and then forcing in the door-post, they ransacked a glass case containing watches and jewellery worth about 731 dollars; the police are still engaged in tracing out the offenders. The other two cases occurred in the country district. In the first instance an attack was made by a party of Malays on the opium shop at Batu Oban; the shop is close to the beach, and about a mile distant from the nearest police station; no resistance was offered by any of the inhabitants of the village, and after plundering the shop the robbers returned to their boat, and had got clear away before any report of the occurrence was made to the police. The second was of a similar nature: two Chinese shops in a large village, also on the sea-shore, and not far from Batu Oban, having been plundered by a large gang of Malays, who deterred the neighbours from rendering assistance by firing off muskets, and threatening to kill any one who dared to leave his house; the value of the property carried off has been estimated at 394 dollars. It has been ascertained that both these burglaries were committed by Malays from Qualla Mudah, in the Quedah territories; two of their number have been arrested by the police, and two more by the Rajah of Quedah; and there is every reason to hope that the whole of the party will eventually be brought to justice.

Counterfeit coin.

37. The police have been most successful in bringing to punishment a gang of coiners, who had long carried on operations in the vicinity of George Town without detection; they had arrived at a considerable degree of perfection in the art of making counterfeit dollars, and had engaged the co-operation of a native merchant of apparent respectability in giving them circulation; but of this gang, including their accomplice, nine have been convicted, and eight of the number sentenced to transportation.

Cutting and wounding.

38. Of cutting and wounding there have been 18 cases reported; with the exception of three, however, they were not of a serious nature, and were all treated by the magistrate as ordinary cases of assault. Of these three the first occurred in Queen-street: a Chinaman, a minor from Laroot, who had only been a few days at the station, accompanied a prostitute to her house; he had hardly been in her company about half an hour, when the neighbours were alarmed by hearing her cries, and, on rushing to her aid, seized the man with whom she was still struggling, although she had received a deep wound on her neck inflicted with a knife; the offender was convicted and transported for life. The second took place at Pulo Tikoos: a Chinaman, actuated by jealousy, laid in wait for his rival as he was walking home at night with the woman to whom he was attached; attacked him furiously with a large butcher's knife, and inflicted several severe wounds; he was sentenced to seven years' transportation. In the last the culprit was a Malay resident of Jellutong, addicted to opium smoking, who, in a fit of jealousy, attacked his wife with a parang, wounding her, as well as a man and another woman who came to her assistance, severely; he then fled across to the province, and has since escaped to the Quedah territories; but there is reason to believe that he will be apprehended and made over by the Quedah authorities.

Embezzlement.

39. There have been 10 cases of embezzlement, some of a very serious character. In the month of December, two cash-keepers in merchants' offices, and a bill collector in the mercantile bank, were convicted of this offence, and sentenced respectively to 18 and 12 months' imprisonment. In January there were two cases: the cashier of the mercantile bank was charged with embezzlement to the amount of 1,500 dollars; he was found guilty and sentenced to seven years' transportation; the other case was that of the police subadar, which has already been referred to.

Forgery.

40. Out of the four instances in which forgery has been committed, three convictions have been obtained.

Gambling.

41. One hundred and thirty-four cases of gambling have been reported, and 598 persons apprehended; but in spite of the best efforts of the police, many long established gaming-houses continue to exist, in the present state of the law it being extremely difficult to suppress them.

Housebreaking.

42. There have been only two cases of housebreaking deserving of any notice; one was committed by a time-expired Armenian convict, who, having been accustomed to visit the Armenian priest, took advantage one day of the latter's absence to break into the house, and steal the church plate valued at 605 dollars; of the stolen property 420 dollars' worth was recovered, and the convict sentenced to seven years' transportation; whilst awaiting deportation, he effected his escape from Her Majesty's gaol; after being some time at large he was recaptured, but again made his escape from the police escort in whose charge he had been placed. The other is supposed to have been perpetrated by a party of convicts; during the night the thieves entered the commissariat go-down by letting themselves down through the roof from which they had previously removed some tiles; an iron chest was opened, and property to the value of 200 dollars carried off; a clue to the perpetrators has been obtained.

Larceny.

43. Under the head of larceny there has apparently been a very great increase of crime; this

CHAP. XVII. Straits Settlement.

this is, however, in some measure accounted for by the increased accuracy in the preparation of the returns.

Murder.

44. Eleven murders have been committed; the first occurred at Ayer Etam. A gang of plunderers attacked a lone house and mortally wounded the owner, by whom they were resisted; three of the gang were arrested, and two found guilty and sentenced to death, the third turning Queen's evidence. The second was that of a Malay, who, whilst in his boat off Pulo Rhimow, was robbed by a party of Malays who followed him in another boat; he received a wound from the effects of which he died the next day; no clue to the guilty parties has as yet been discovered. The third took place at Ralow: a Chinese cooly was found savagely murdered by repeated blows of a lading, on a bridle path leading from Ralow to Bali Pulow; revenge must have been the motive for the crime; two persons were arrested on suspicion, but the evidence against them not being sufficient to support a prosecution, they were released on bail. The fourth was perpetrated at Choro Tokong in the southern division of Province Wellesley: some Malays, maddened at the loss of their money at a gaming-house, broke into it at night, killed two Chinese on the spot, and mortally wounded a third; they immediately crossed the frontier and took refuge in the neighbouring native state. In the fifth instance the murdered man was an old Chinaman living by himself in a hut about a mile from the police station at Pulo Betong: on the night of the murder, about nine o'clock, a neighbour heard the deceased calling for assistance, and on running towards his house, found him sitting on the ground frightfully cut about the face, and though still alive, unable to speak; the door of the house was open, but no marks of violence could be discovered; the police, however, found two parangs near the wounded man, evidently flung away by his assailants, which have since been identified as belonging to two Malays who have absconded. The sixth victim was a Kling, who, in a street fight, received a blow on the head, from the effects of which he died unexpectedly in the hospital, without having made any dying declaration. The seventh murder happened at Mount Erskine: a cooly, in the course of an altercation with his master, killed him with a blow from his axe; the murderer was apprehended, but committed suicide whilst in confinement. The eighth occurred at the Hindoo burial ground, near the sepoy lines; two convicts were stationed in a hut in charge of some Government stores required for the repairs of the neighbouring weir; one of them, while under the influence of liquor, murdered his companion for the sake apparently of a few dollars; he was tried and convicted. The ninth arose out of a quarrel: two Malays, uncle and nephew, had a dispute about some land, the former struck the latter several times with a stick, upon which he ran into the house, seized a kriss, and on being again struck, stabbed his assailant, he then fled across the frontier; an application has been made for his surrender. In the tenth instance a prostitute, residing in Queen-street, George Town, was discovered by the police lying on her bed in an upper room with her throat cut, none of her property had been taken away, and it is evident that the murderer must have been actuated by a spirit of jealousy or revenge. The last case was that of a Chinaman found dead under suspicious circumstances at Bagan Ajam, his death was attributed to a severe beating, of which the body bore the marks; two persons were arrested on this account, but the grand jury threw out the Bill against one, and the petty jury acquitted the other.

jury.

45. There were seven cases of perjury brought forward by the police; two of these were dismissed by the magistrate, of the remaining five three convictions were obtained.

acy.

46. There have been only three cases of piracy reported, all of a trifling nature.

ape.

47. Out of the four cases reported three were sent up for trial; two were for abusing children under the age of five years; in both the criminals, who were Chinese, were convicted; in the third case the prisoner, a Malay, was acquitted.

MALACCA.

reaches of Trust.

48. The cases of breach of trust have generally occurred owing to persons entrusting others with jewellery to dispose of for them without taking any receipt or requiring the presence of witnesses, thus giving great encouragement to commit this crime.

arceny.

49. A great number of the larceny cases reported have been trumped-up charges, and the accused parties have been discharged. The following may be considered a specimen of this class:—Two brothers-in-law, residing in adjoining houses, having had a dispute, and one having been absent from home at Pulo Besar, on his return accused the other of having entered his house, destroyed papers, deeds or bonds, and stolen property to the value of 1,000 dollars; although search was immediately made no traces of the missing property could be discovered, and a second search subsequently made proved equally unsuccessful. About eight or nine days after the defendant was arrested on a warrant issued on the complaint of the accuser, and the house was again searched, and property of trifling value found on the roofs of both houses; still later, articles worth about 300 dollars were discovered, scattered about on the ground in their rear, and on the neighbouring plantain trees. The bill against the accused was ignored by the grand jury. There is only one other case deserving of remark,—a British subject, whilst in the Moar territory, stole a boat and timber belonging to a resident of that country, and having brought the stolen property to Malacca, disposed of them at Poongore, and then absconded. The owner of the property having

having lodged his complaint, the delinquent was traced and delivered up on the usual requisition by his Highness the Tumongong, in whose territories he had taken refuge; he was tried under the provisions of Act I. of 1849, convicted, and sentenced to 10 years' transportation.

Manslaughter.

50. There have been two cases of manslaughter, and one in which a verdict was found of justifiable homicide. Of the former, the first occurred at Sebattoo. Two Chinamen were suspected of stealing fowls, and accused by the owner of the theft, upon which they were annoyed and struck him. A few days after he died from rupture of the spleen caused by the blows received. One of the offenders was arrested and sentenced to 18 months' imprisonment in the house of correction. A warrant has been issued against the other, but he has hitherto eluded capture. The second was that of a Chinaman who had long been ill, and was placed by three of his tribe in the midst of a jungle to die, they not wishing his death to occur in their house; they have been arrested and are now awaiting trial. The latter took place under the following circumstances:—A police duffadar and peon, while on their night rounds, attempted to arrest two invalid convicts, suspected of stealing fowls; a struggle ensued, in the course of which one of the convicts stabbed the duffadar in two places with a knife; in return he struck him a severe blow with a stick, fracturing his skull, and thereby causing his death; both the duffadar and the peon, who were also injured in the affray, were taken to hospital; they have since recovered, and returned to their duty; the other convict escaped, and has not yet been identified.

Murder.

51. The murder cases, which have been numerous, may be generally divided into two classes, those committed on Malays, owing to a spirit of revenge or jealousy, the assassin flying immediately after the discharge of the fatal shot; and those in which Chinese hawkers are the victims, the incentive being the love of plunder. The first murder was perpetrated in the forest of Eana; a Malay returning with several others from Rambow, never reached his house; his companions could give no satisfactory account of him, and on search being made his skeleton was found in the forest. One man was arrested and brought to trial, but acquitted; warrants have been issued against three others, who have hitherto evaded the search of the police; no reason can be assigned for the murder. In the second instance a party of Chinese, who had been to trade across the frontier, were attacked by a gang of robbers a little beyond the boundary, and two of their number, one only being a British subject, brutally murdered; the corpse of the latter was brought in by his companions, who expressed themselves, however, unable to recognise the murderers. The third case occurred at Brissoe; a Malay whilst sitting with his child in his house, was killed by a shot fired from below through the bamboo flooring; although every effort has been made to discover the assassin, hitherto no clue has been obtained. The fourth was that of two Chinamen belonging to the crew of a large boat proceeding up the Kassang river; they had preceded their companions in a smaller boat; and no traces of them having been found when the latter reached Chin Ching, search was made, and the body of one of the missing men was discovered by his comrades floating in the river near Chin Ching, and that of the other subsequently by the police at Teloh Dalam. No information has been gained as to the murderers, the desire to secure the contents of the boat doubtless led to the crime. The fifth took place at Chin; a Chinese cooly, working on a plantation there, having killed his companion by stabbing him with a cooking knife; he was convicted, and sentence of death passed; but subsequently commuted to transportation for life. In the sixth the victim was a Malay, who was murdered at Layray; four men were arrested on suspicion, two were dismissed by the magistrate, and the other two acquitted on their trial at the sessions. The seventh took place at Malacca Pinda: a Malay, whilst sitting in his verandah, being shot from below; no cause for the deed has ever been discovered, and the murderer remains unknown. The eighth was the case of a Chinese hawker proceeding to Ayer Krem to purchase chillies; he was murdered *en route*; his skeleton was found in the jungle near Bukit Linghy; two Malays who had been seen in his company were arrested on suspicion, but on being brought to trial, they were acquitted. The ninth person murdered was a Chinese hawker, who was stabbed at Chirana Pootay, about a mile and a half from the boundary. From the evidence adduced before the coroner it appeared that the murderers were subjects of Rambow. A letter was addressed to the rajah, requesting their surrender, but the answer was to the effect that they could not be found; the frontier police are, however, on the watch for them, and they are likely to be apprehended. The tenth was the Punghooloo of Ayer Panus; he was shot whilst sitting in his house talking to his wife, who was also wounded, but has recovered; the house is surrounded on three sides with jungle, and although the neighbours immediately made a search for the culprit, he escaped undetected. The eleventh was another Chinese hawker, who, whilst passing along the jungle path between Soongie Oodang and Koondore, was attacked and plundered by five Malays; the murder was, however, witnessed by another Chinaman, and on his information three of the alleged guilty parties have been apprehended and committed for trial; warrants have been issued for the apprehension of the other two, who have not since been seen within our territories. The last case was that of a convict peon, who was murdered at Cape Rachado by his fellow convicts, who escaped into the Salangore country, and have not as yet been re-captured. A report was received of the murder of a fourth Chinese hawker in the jungle of Kamooning; up to the present, however, the missing body has not been found, and some persons who were arrested on suspicion have consequently been released on bail.

CHAP. XVII. Straits Settlement.

Perjury.

52. Of the five cases of perjury one was against a policeman for giving false evidence in a burglary case under investigation; he has been committed for trial at the next sessions.

Piracy.

53. The case of piracy occured off the coast of Lookoot. A Chinese boat, belonging to British subjects, was attacked, and eight Chinese said to have been killed by a party of Malays; three of their number having proceeded to Malacca were recognised by one of the Chinamen who escaped, and the Tonze having been sent to Lookoot to make inquiries on the subject, three more were surrendered by the local authorities; owing, however, to the absence of the prosecutor and witnesses they have all been admitted to bail.

Slave-dealing.

54. The cases of slave-dealing have been four in number; the first was the disposal of a Jacoon girl who was enticed away from her house by one of her own tribe, and sold through the means of a Chinamen to another Chinaman for 14 dollars. About eight months afterwards she was discovered by her brothers, who brought the matter to the notice of the police; the parties concerned were committed for trial, the two men being sentenced to three years' imprisoment with hard labour, and the woman released, giving bail for good behaviour. The second and third were connected with the sale of a boy who was carried off from Tanjong. In the first instance two Malays were charged with having taken him to Delbie, where he was sold. This charge was dismissed, and subsequently another Malay was accused of having decoyed him from Delbie with intent to sell him elsewhere; he was, however, released, and eventually the lad was produced by the two men against whom the original complaint had been laid. The fourth is the case of a Malay boy, who was engaged as a sailor on board a prahu bound for Langat. The nakodah on his return reported that the prahu had been wrecked, and on being questioned by the boy's father denied that his son had accompanied him; whilst on being apprehended he stated that the boy had gone with him, but had run away at Langat; he has been duly committed for trial.

55. Although it is much to be regretted that at Malacca in so many serious cases the criminals have escaped detection, in the present state of the country, even were the police force much stronger than it is, such a result could hardly be prevented, it being almost impossible to obtain early information as to occurrences taking place along the different by-paths through the jungle, or to institute a pursuit with any great hope of success, even on occasions when timely notice of a crime may be afforded.

SECTION II.—REVENUE.

PART I.—LAND.

1. Under the Budget system recently introduced, many items of receipts, formerly entered under this head, have been transferred to other columns of accounts, and the entries in the following comparative Table of the land revenue collected at the different stations in the Straits Settlement consequently vary from those recorded in last year's Report:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	54,474	56,501	Increase, 2,027
Penang - - - - - -	58,171	32,521	Decrease, 25,650
Malacca - - - - - -	8,049	12,169	Increase, 4,120
TOTAL - - - *Rs.*	1,20,694	1,01,191	Decrease, 19,503

2. At Singapore the value of land has been materially depreciated, owing to the depressed state of commerce, and there have, therefore, been but few sales in the land department; the only town lands disposed of have been 201 lots on building leases along River Valley Road, realising the sum of 2,393 rupees, with an annual quit-rent of two dollars for each lot; whilst in the country 3,664 acres have been sold for 18,804 rupees. No desire is now manifested by the Chinese squatters to take out grants for the land in their possession, and coercive measures, under present circumstances, might only have the effect of driving them from the island.

3. The

3. The great falling off in the collections at Penang is attributable partly to the abandonment of many of the small estates in the interior of the island, consequent on the destruction by disease of the nutmeg plantations, and partly to the expiration of numerous leases dated in 1840 and 1841; the terms of the new agreement being yet under consideration. Although the arrears of quit-rent for former years have been somewhat reduced, they still amount to upwards of 15,000 rupees in Prince of Wales's Island, and 8,000 rupees in Province Wellesley.

4. At Malacca increased expense on account of the additional establishment has been more than covered by the increased revenue collected, there being a clear gain over last year's collection of 864 rupees, notwithstanding the falling off in the income from permits to open tin mines, and from cutting papers and registering fees.

5. The arrears, as shown by the Returns on the 1st May, amounted to 19,962 rupees; they are principally due from the residents in Nanning. Efforts have been made to recover as much as possible, but the poverty of the people is a great obstacle to their success. In many cases rents have not been collected for nearly 20 years, and the accumulations have consequently become too heavy to admit of their being cleared off rapidly; but by avoiding having recourse to harsh measures and practising due forbearance, there is reason to hope that a very large portion will eventually be realized. In some few instances where, owing to the deaths of the original grantees, and the land having been allowed to revert to jungle, there appeared little probability of the liquidation of the Government demand, the arrears have been remitted.

PART II.—MISCELLANEOUS (REVENUE).

1. Under this heading are included the sums collected on account of Pawnbrokers' fees, the tin and brick kiln farms, and the tenths on timber, granite, and coral. The following Table shows the realizations during the years 1860-61 and 1861-62:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore	18,956	18,839	Decrease. 117
Penang	3,751	4,460	Increase. 709
Malacca	20,913	15,475	Decrease. 5,438
TOTAL *Rs.*	43,620	38,774	4,846

2. At Singapore there has been but little variation; the slight excess at Penang is owing to the system recently introduced at that station of granting leases to cut timber within certain defined limits and under certain restrictions upon Government land; the decrease at Malacca is attributable solely to the reduction in the amount received for the farm of the Royalty on tin consequent on the departure of a large number of the miners from Kassang to the neighbouring state of Soongie Ujong. There can be little doubt that, to admit of the mines being profitably worked, operations should be conducted on a larger scale than at present, and with the aid of the appliances and machinery of Europe; hitherto the workings have been confined almost entirely to the surface, the Chinese miners not having the means of keeping their galleries clear from the water with which they are filled on their attaining any depth.

PART III.—EXCISE.

1. The receipts under this head are realized from the sale of the farms for the monopoly of retailing opium and spirituous liquors, and are exhibited in the subjoined comparative Table:—

	1860-61.	1861-62.	
	Rs.	*Rs.*	*Rs.*
Singapore	8,38,362	8,38,362	—
Penang	2,63,180	2,97,572	Increase. 34,392
Malacca	1,28,711	1,28,711	—
TOTAL *Rs.*	12,30,253	12,64,645	34,392

2. There

2. There has been no change as regards the amount received either at Singapore or Malacca, but at the former station the practice of selling the farms conjointly with those of the neighbouring native state of Johore has been abandoned.

3. At Penang there has been a considerable increase, owing principally to the advanced price paid for the Opium Farm.

PART IV.—TAXES.

1. The only assessed taxes are the sums levied under the operation of Act XXXII. of 1860 upon the interest payable upon Government Promissory Notes; they amounted as follows:—

	1860–61.	1861–62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	138	319	181
Penang	435	459	24
Malacca	146	332	186
TOTAL *Rs.*	719	1,110	391

PART V.—LAW AND JUSTICE.

1. This part embraces all sums paid as fees to the registrars of the Supreme Courts, Commissioners of the Courts of Requests, and sheriffs, as well as the proceeds of the sale of articles manufactured by the prisoners confined in the different houses of correction; they are noted in the Table below:—

	1860–61.	1861–62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	32,559	54,957	22,398
Penang	20,106	34,787	14,681
Malacca	5,447	9,775	4,328
TOTAL *Rs.*	58,112	99,519	41,407

2. The great increase at all these stations has arisen from the payment of the court establishment by fixed salaries in lieu of fees, so that in reality there has been no gain, the expenditure having increased in a proportionate degree.

PART VI.—MARINE.

1. This section includes all fees on port clearances and the registry of vessels, and sums debited to other Governments on account of coal supplied to their steamers. The receipts during the two past years were as follows:—

	1860–61.	1861–62.	
	Rs.	*Rs.*	*Rs.*
			Increase.
Singapore	2,437	3,096	659
Penang	8,819	21,947	13,128
			Decrease.
Malacca	23	- -	23
			Increase.
TOTAL *Rs.*	11,279	25,043	13,764

2. The increase at Penang is caused solely by a large quantity of coal having been supplied to Government steamers, a corresponding expense having been thereby incurred.

PART VII.—PUBLIC WORKS.

1. Under this heading are inserted light-dues, rent of markets, and Government bungalows. The total collections have been as follows:—

	1860-61.	1861-62.	Decrease.
	Rs.	*Rs.*	*Rs.*
Singapore	56,681	55,738	943
Penang	939	919	20
Malacca	172	138	34
TOTAL *Rs.*	57,792	56,795	997

2. The above sums do not include light-dues paid at Indian ports. From returns received from Bombay and Madras, it appears that in the year 1860-61 the receipts at those Presidencies amounted to 6,374 rupees; no return has as yet been furnished by the deputy auditor and accountant general, Bengal.

PART VIII.—MISCELLANEOUS (GENERAL).

1. This section embraces all realizations from marriage and naturalization fees, sales of stores and Government presents, freight and hire of Government steamers, &c., on which account the following sums have been received:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	9,430	16,289	6,859
Penang	178	9,467	9,289
Malacca	757	1,995	1,238
TOTAL *Rs.*	10,365	27,751	17,386

2. At Singapore the increase has been occasioned by the discontinuance of the custom under which the medical subordinates attached to the different hospitals also performed the duty of purveyor; the diet required by the sick is now furnished by the commissariat, payment being made out of the hospital charges, the whole of which are entered in the column of receipts. At Penang there have been large payments as re-funds of salaries and advances to which the increase is to be attributed.

3. The total collections made in the Straits on account of the local Government are as follows:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	10,13,040	10,44,104	31,064
Penang	3,55,582	4,02,135	46,553
Malacca	1,64,220	1,68,597	4,377
TOTAL *Rs.*	15,32,842	16,14,836	81,994

but to these sums are to be added the amount received on account of post office stamps and collections, and the sale of convict gaol manufactures and deceased convicts' estates, as shown below:—

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore	71,198	1,15,326	44,128
Penang	12,619	13,282	663
Malacca	495	2,173	1,678
TOTAL *Rs.*	84,312	1,30,781	46,469

Thus, as calculated in the statements of proper receipts and disbursements prepared, in accordance with the form now prescribed by the Resident Councillors at the different stations, it would appear that the undermentioned sums, showing an increase of 1,28,464 rupees over the receipts of the year 1860-61, may be considered as the revenue of the Straits Settlement during the twelve months constituting the official year 1861-62.

	1860-61.	1861-62.	Increase.
	Rs.	*Rs.*	*Rs.*
Singapore - - - - - -	10,84,238	11,59,431	75,193

Malacca - - - - - -	1,64,716	1,70,771	6,055
TOTAL - - - *Rs.*	16,17,156	17,45,620	1,28,464

SECTION III.—EDUCATION.

1. At Singapore the institution has continued to maintain its high character; the average daily attendance has been 194, or 22 in excess of the number during the previous year. The number of boarders on the foundation has increased from five to eight, and the progress of the pupils, as tested at the general examination, has been in every respect satisfactory—seven scholarships, varying in value from three dollars to seven dollars per mensem, were awarded. The building has been placed in a proper state of repair.

2. The girls at the school attached to the institution are reported to have made fair progress in their studies; the number on the rolls is 36, with a daily average attendance of 30 scholars.

3. The inmates of the Malay Mission School number 55, 42 boys and 13 girls, all boarders. In addition to acquiring a fair knowledge of English and Malay, the boys are instructed in some useful occupation, such as printing, book-binding, &c., and the girls in plain and fancy needlework, so that in after-life they may have no difficulty in procuring a livelihood.

4. The attendance at the Malay school in Campong Glam has been extremely irregular, and the average daily number of students is only 15. The school-house, a thatched building, was pulled down under the orders of the Municipal Commissioners, and for some time past the school has been held in the verandah of a house rented for the purpose; a new school-house will, however, be shortly erected in a more suitable locality than the old one.

5. The school at Teluk Blangah has been long in a declining state; under the patronage, however, of his Highness the present Tumongong, and his brother Inchi Wan Abdul Rahman, there is reason to hope that it will rapidly improve; the house is now being placed in good repair, a new master has been engaged, and already the names of 63 lads have been placed on the rolls.

6. Of the schools not connected with Government, one of the most deserving of notice is the school at Tanjong Paggar, established and maintained at the sole cost of Mr. Guthrie, the proprietor of the land in the neighbourhood of the village. The number of names enrolled is 57, viz.: 48 Malays and nine Chinese, and the average daily attendance is 45; 14 only learn English, and the remainder are taught the first simple rules of arthmetic, and to read and write in the vernacular. During the time of their attending school the boys make good progress, but being chiefly the children of poor parents, they are generally withdrawn at an early age to enable them to aid towards their own support.

7. The Free School at Penang has on its lists the names of 304 pupils, furnishing an average daily attendance of 212, a great improvement upon the preceding year; considering the early age at which they relinquish their studies, the lads obtain a fair general knowledge of the ordinary branches of education. The staff of instructors is numerically inefficient; the time of the head master, who is well qualified for his post and painstaking, being occupied in attending to classes, the charge of which should be entrusted to a competent assistant, so as to enable the elder boys to derive the full benefit of his able tuition.

8. At the Vernacular Branch School at Glugore the pupils number 50, with an average attendance of 28; the instruction is confined to imparting a knowledge of reading and writing in the vernacular, and of the simple rules of arithmetic.

9. The scholars, numbering 60, at the Protestant Mission School, are chiefly Eurasians or Chinese; they are all boarders, and only allowed to vist their homes once in the course of the year; they appear to have made fair progress in their studies.

10. The

10. The result of the examination of the students at the Christian Brothers' School was not quite so satisfactory as usual; this falling off may, however, be attributed to the departure of the former able head master and to the ill health of his successor.

11. Much credit is due to the Christian sisters for their charitable exertions in the cause of education; the profits derived from the tuition of the better class of their pupils are entirely devoted to the maintenance of the orphans, 93 in number, that have been placed under their charge.

12. At Malacca the Free School still labours under the disadvantage of having no head master, as, although there is a numerous attendance, the funds of the institution do not admit of a sufficient remuneration being offered to secure the services of a competent person.

13. Miss Williams' School has been removed to the new building, which is centrically situated, and apparently well adapted for the required purpose; as the scholars are almost all children of an early age, the teaching is at present merely elementary.

14. A girls' school has recently been established under the direction of the Sisters of the Order of the Holy Infant Jesus; the education is almost entirely gratuitous, though in cases where the pupil can afford to pay, a monthly fee of two dollars is charged. The establishment, which maintains a large number of orphans, is supported by the labour and industry of the sisters and orphans of the convent, aided by contributions from the sister institution at Singapore.

SECTION IV.—PUBLIC WORKS.

1. At Singapore, the alterations to the old police office having been completed, it has been rendered in every way suited for the purpose for which it is required; in addition to meeting the requirements of the Commissioner of Police, ample accommodation being afforded to the magistrate and the Commissioner of the Court of Requests, whose courts are located in the two wings of the main building. Three new substantial police stations have been erected on the coast of the Old Straits for the reception of the additional police paid by the opium farmer. The former police station, in the Rochore district of the town, which was destroyed by fire, has been replaced by a structure of less inflammable materials; material alterations and repairs have been executed to the China town and Ellenborough markets. The canal through Balastier estate forming the main line of drainage for a large district, has been cleared and enlarged. On the road to Changhie, bridges have been constructed to facilitate the drainage of the inner lands and admit of its passage to the sea; two timber platform bridges have been erected on the Kranjee road, and a new line of road has been almost opened between Serangoon and Shanghie; this last work has been much needed for police purposes. A few necessary alterations have been made to the Lunatic Asylum and Pauper Hospital, and, in connection with the latter institution, a small hospital has been built for the reception of lepers. In the convict lines, the buildings for the steam saw mill have been completed, and the machinery put up. Considerable improvements have been effected to the ventilation of the different magazines, they were urgently required, it having been found that, owing to their excessive dampness, the powder in store rapidly deteriorated. Pending the receipt of final orders, relative to the disposition of the buildings in Fort Canning, a portion of the large building, ordered to be used as a hospital, has been partitioned off so as to admit of its being converted as a temporary measure into a guard-room. The sea wall has progressed satisfactorily.

2. At Tanglin 10 permanent barracks, with out-offices, the hospital, main guard, canteen, officers' mess room, and subalterns' quarters are ready for occupation. The lighthouse at Cape Rachado is rapidly approaching completion.

3. At Penang the additional storey to the main range of buildings in Her Majesty's gaol has been nearly completed; verandahs have been added to both wings of the Court House; new police stations have been erected at Ayer Etam and Batu Kawan, and a third at Tanjong Tokong has been commenced. An upper storey has been added to the Court House at Bukit Tamboon, as well as to the Police Hospital at Butterworth. A wooden bridge has been thrown over the Tibing Tingee River, and the abutments for the new bridge over the Jooroo River have been built. These last works are both of considerable importance, being on the main line of road leading to the southern division of Province Wellesley. The new convict lines and overseer's quarters in the north division of the province have been nearly finished. A verandah and covered way, connecting the building with the out-offices, have been added to the Native Infantry Hospital, and the necessary works have been undertaken for supplying the garrison of Fort Cornwallis with pure drinking water; a large portion of the masonry of the dam thrown across the stream near Scotland estate for the purpose of directing a sufficient supply of water towards the tanks near the Sepoy barracks, having been carried away, the weir and wing walls have been reconstructed. Some progress has been made in the construction of the new line of road between Jawee and Nebong Tubal, and of the bridges on the road between Telloh Ayer Tawar and Permatang Bindhari, as well as in the improvement of the main road between the ferry at Bukit Tamboon and Jawee.

4. At Malacca several additions have been made to Her Majesty's gaol, which has now been rendered complete in every respect. The building formerly used as a gaol has been altered and improved, and is at present occupied as a house of correction. Two new stations have been built for the accommodation of the frontier police at Poolow and Batang, Malacca, and the old police station at Karbow has been renewed. The handsome iron bridge over the Malacca river, the liberal gift of Mr. Tan Kim Seng, has been duly opened. A bridge has been thrown across the Sree Malacca canal, and 13 platform bridges laid down on the road to Aloor Gadjah. A new line of road has been opened between Kassang and Batang, Malacca, so as to enable the police on the frontier to receive, if necessary, support from the former station, and also to afford access to an apparently rich district. The ground for the new cemetery at Bukit Sarinday has been cleared, and a suitable covered entrance constructed. The channel of the Duyong river has been nearly cleared. The New Harbour lantern has been placed in position, and displays to seaward a brilliant light, reported to be visible at a distance of 15 miles.

5. Consequent on the retirement of the late able chief engineer, Lieutenant-colonel Collyer, the Supervising Officer of Public Works in the Straits Settlement has been made a chief engineer of the 3d class, and appointed secretary in the Public Works Department.

SECTION V.—MARINE.

1. Consequent on the arrival from China of the small steamers "Tonze" and "Mohr," the three sailing gunboats, attached to the different stations in the Straits Settlement, have been thrown out of employment; two of them have been sold, and the third retained under the charge of the master attendant at Singapore, with the view to her being manned temporarily to meet any emergency that might occur owing to the absence of the steamer "Hooghly," or to her being in any way disabled (a not unfrequent occurrence, her boilers being nearly worn out), and consequently prevented from putting to sea.

2. The "Tonze" has been attached to the station of Malacca, and the "Mohr" to Penang; both steamers have performed good service during the year, and the diminution of petty piracy along the coast may, in a great measure, be attributed to their presence. In addition to ordinary political and police duties, the "Tonze" has been employed in conveying stores and provisions to the light-vessel on the North Sands and to the Cape Rachado Lighthouse, and has been found most useful. Although ill-fitted to face the monsoon in the China Sea, and from their want of accommodation not suited for the transport of troops, these vessels are well adapted for the work which they are called upon to perform within the Straits of Malacca, as, owing to their light draught of water, they can cross the bars that exist at the mouths of all the rivers of the Peninsula, and penetrate for miles into the interior; thus depriving the crews of native boats of all hope of eluding pursuit by seeking shelter, as formerly, in the nearest river whenever there was a prospect of their being apprehended for the commission of piratical acts.

3. The shipping offices at Singapore and Penang have continued to give satisfaction, and hitherto there has been no complaint against them either from the owners or agents of vessels, or from the seamen seeking employment. At Singapore, owing to the dulness of trade for some time, the business at the shipping office was extremely slack, the amount realised by fees not being sufficient to meet the payment of the full salaries authorised for the officials attached to the establishment; latterly, however, there has been a great improvement in this respect, and the annual account shows a balance to credit of $203.44, or *Rs.* 447. 9.

4. At Penang the collections at the shipping office have never yet covered the authorised amount of disbursements, and the shipping master has consequently been always underpaid; but at this port also a favourable change has taken place of late, and it is probable that the return for next year may exhibit a surplus.

Orders have been issued for the laying down of a buoy to mark the position of the "Charybdis Rock," and also for placing a sign-board on Balayer Point to give warning of the existence of the reef at the western entrance of New Harbour at Singapore.

SECTION VI.—FINANCIAL.

1. The subjoined comparative tables show the actual disbursements made from the local treasuries during the year 1861–62. They include, each under its proper head, every item of local and general expenditure defrayed from the funds at the command of the Resident Councillors at the three stations; but contain no account of disbursements made by the Bombay Government on account of Straits convicts transferred to that Presidency; by the Madras Government on account of military charges; by the Supreme Government on account of stationery and other articles supplied to public departments, or by the Home Government on account of pensions to retired officers and pay to officers on leave:—

Malacca	14,37
Labuan	8,39

2. The small sailing gun-boats having been disposed of as soon as practicable after the arrival of the steamers "Tonze" and "Mohr," each station is now debited only with the disbursements of the steamer actually attached; thus the annual cost of the "Hooghly," instead of being, as heretofore, evenly divided between the three stations, is entered solely in the Singapore accounts; one-third of the expenditure on account of the Governor and his establishment, of the surveyor-general, and of pensions granted to retired civil officers residing in the settlement, is charged against each station, whilst the amount of the salaries of the Honourable the Recorder of Singapore (with his establishment) and of the Registrar to the court is distributed in equal proportions between the two stations of which his division is composed.

3. The floating light-vessel "Torch" being attached to Malacca, the whole of her expenses (9,128 rupees) are debited against that station, although the receipts at the Treasury on account of Straits lights do not amount to more than 100 rupees.

4. The only items of local expenditure that materially vary from those of last year are those recorded under the heads of marine at Penang, and land revenue and police at Malacca, as already noted in Section II. The first-named charge has arisen from the purchase of coal for the use of steamers belonging to other governments, for which re-payments are duly made; the two latter have been occasioned by the increased rate of salaries granted to the surveyor and his department, and the establishment of the Frontier Police Force.

5. Consequent on the reduction in the strength of the regiments of Madras Native Infantry stationed in the Straits, the military charges debited to the general government of India have been considerably diminished.

6. The disbursements on account of the Imperial Government have been confined to the payment of expenditure required for the maintenance of the naval coal depôt, and of pensions to pensioners of the Ceylon Rifle Regiment, and merely the amount expended under these heads, excluding the heavy advances made on account of the China expedition in 1860–61, is consequently entered in the comparative table showing the sums disbursed during the two years.

SECTION VII.—POLITICAL.

1. Continual disturbances, detrimental to our commerce, having taken place along the Pahang Coast, owing to an attempt on the part of Inchi Wan Ahmud, a younger brother of the Bandaharah, to seize upon the Provinces of Quantan and Endow, which he alleged had been bequeathed to him by his father, and both parties having sought the countenance of the British Government, with the view of preserving the peace of the Peninsula, which might otherwise have been endangered, it was deemed advisable to adopt measures for ensuring a speedy settlement of the question at issue, and the Governor accordingly personally visited Pahang, and offered his mediation; the Bandaharah having signified his assent to the terms proposed, they were communicated to Inchi Wan Ahmud, who, however, declined to accept them; he was, therefore, informed that his pretensions to authority over the districts claimed could not be recognised, and that any interference with the interests of British trade would be promptly resented; the neighbouring chiefs were, at the same time, warned against rendering him any assistance or support; this warning had the desired effect; Inchi Wan Ahmud speedily retired from the positions he had occupied, and the sea-board of Pahang has been subsequently free from any attack on the part of his adherents.

2. The Sultan of Tringanu, whilst *en route* to his own country from Galle, whither he had proceeded with the intention of continuing his pilgrimage to Mecca, having, on the occasion of his interview with the Governor, requested that the influence of this Government might be exerted, in order to secure the return of some of the ladies of his family temporarily residing at Pahang, the necessary communication on the subject was duly made to the Bandaharah, and the wishes of the Sultan at once complied with.

3. The prime minister of Siam, together with some members of the Royal Family, visited the different stations in the Straits Settlement, and were received with due courtesy.

4. Several disputes having occurred between British subjects and those of Johore, owing to some misconception as to the extent of the Tumongong's jurisdiction, the attention of his Highness was called to the necessity for respecting the rights of the British Government; subsequently a piracy attended with murder having been committed on a British boat off Pahang, a village on the Johore Coast, and the criminals not having been given up, the Tumongong inflicted a heavy fine upon the residents of the village, which was duly paid to the surviving sufferers and the heirs of the deceased men, as compensation for the losses they had sustained. The Tumongong died on the 31st of January 1862, and was succeeded in the sovereignty of Johore by his eldest son his Highness Inchi Wan Abu Bakar.

5. Continued

5. Continued complaints having been received respecting the refuge afforded in Quedah to the armed bands, by which so many of the gang robberies in Province Wellesley had been committed, a letter was addressed to the Rajah on the subject, pointing out the obligation he was under of adopting measures to prevent the violation of British territory, and the evil to himself likely to ensue in the event of this obligation being lightly regarded. Since the receipt of this communication, the Quedah authorities have duly co-operated in maintaining the peace of the frontier, and gang robberies have ceased.

6. Several British subjects, Chinese, residing at the mines in Laroot, having been expelled with the loss of all their property, owing to an attack made upon them by a rival society supported by the chief in charge of the district, the Sultan of Perak was called upon to cause an investigation to be held into the charges preferred against his officer, and to afford redress to those persons who might be proved to have suffered from his misconduct; whilst fully acknowledging the justice of the demand, and promising that the desired inquiry should be instituted, the Sultan for months refrained from taking any steps in the matter; eventually, in April last, on the urgent remonstrance of the Government against any further delay, the Laximana was deputed to Laroot; this chief recognised the claims of the greater number of the complainants, and awarded equitable compensation. The Laroot authorities, however, refused to abide by his decision, and he was compelled to appeal for assistance in enforcing his decree to his colleague the British Commissioner. After due warning, the Laroot and Sepatang Rivers were blockaded by the three Straits Government steamers, the blockade was efficiently maintained, and shortly after the close of the official year was attended with perfect success.

SECTION VIII.—MILITARY.

1. Colonel Shubrick has assumed the command of the troops of the Straits, vacated by the removal of Brigadier Babington to a brigade command in the Madras Presidency.

2. Consequent on the late changes in the Madras army, several officers, many of high rank, have been appointed to do duty with the corps at Singapore and Penang; the strength of the European artillery has varied but little from that of last year; in that of the native troops a still further reduction has taken place, and they only muster 1,470 of all ranks.

3. The judicious arrangements with regard to cooking the men's dinners and supplying them with wholesome liquor made by Lieutenant Colonel Hervey, commanding 40th Regiment, Madras Native Infantry, have continued to produce a beneficial effect, and in this corps there has been but little sickness. In the 20th Regiment, Madras Native Infantry, also, although the admissions into hospital were at one time numerous, latterly the amount of disease has not been much in excess of that ordinarily existing in continental stations.

4. The barracks in Fort Canning having been completed, they have been occupied by the European artillery, formerly located in the buildings on Pearl's Hill, which are now undergoing alterations with a view to their conversion into an Arsenal and Commissariat storeroom.

5. During the drill season the attendance on parade of the Singapore Volunteers has been satisfactory; owing, however to the unsafe condition of the butt, there has been no annual practice. At Penang the volunteers have not attended drill with as much regularity as could be wished, but most of the members of the corps have devoted a good deal of time and attention to target practice, and the shooting generally has been very creditable.

SECTION IX.—MISCELLANEOUS.

PART I.—AGRICULTURE.

1. At Singapore, although the amount of the monthly subscriptions does not admit of operations on a large scale, the Agricultural and Horticultural Society is making fair progress; a large portion of the ground made over to the society for a public garden has been laid out with great taste, and two shows have been held for the exhibition of agricultural and horticultural produce. The display of flowers included some rare orchids; amongst the vegetables there were a few specimens of peas, cabbages, asparagus, and Jerusalem artichokes, but the show in this respect was not very encouraging; amongst other produce there were some fine cocoa pods, sugar cane, and a small quantity of cotton and arrowroot.

2. At all the convict detached posts, and at several of the police stations, nurseries of useful and ornamental trees and shrubs have been established, and considerable progress has been made in planting avenues of trees along the most frequented roads.

3. In the Island of Penang disease still continues its ravages amongst the nutmeg plantations, and hardly one has remained unscathed; they are consequently rapidly giving way to plantations of cocoanut and other fruit trees.

4. The rice crop for the past year, both in the island and Province Wellesley, has been abundant, and the out-turn of some of the sugar estates closely approximates to that of the plantations in the best West Indian islands; the yield of tapioca also has been very large; indeed the abundance with which this article has been poured into the home market has seriously affected the market rates, and it will be necessary, as far as possible, to reduce the cost of production to admit of the producer receiving a fair remuneration for his labours.

5. The cultivation of cotton has been commenced at two estates in the southern division of the province; at present the measure can merely be considered as experimental, but the report on the muster forwarded to England was very favourable.

6. Owing in a great measure to the want of space at the different police stations, and to the want of breadth in most of the old roads in the province, but little has been done in carrying out the order with respect to the propagation of trees and shrubs; a nursery has, however, been formed at the new convict lines at Bukit Meniah.

7. At Malacca the rice crop was very poor; this may be attributed partly to the destruction caused by locusts, and partly to the fact that owing to the dread of a repetition of the murrain and inundations of past years the proper season for planting was allowed to pass by before agricultural operations were commenced; fortunately the murrain has not re-appeared amongst the cattle, though the disease still exists in the neighbouring State of Rumbow.

8. The cultivation of cotton has been introduced with tolerable success in various parts of the country, and coffee has also been tried by several persons. Experience shows that in transplanting the seedlings or shoots of the coffee shrub the shelter of larger trees is necessary, whereas if a plant be removed with a stem about half an inch in diameter, all the branches and roots cut off, leaving only about six inches of stem from the taproot, and placed with about an inch of stem protruding in a hole one foot in diameter, and previously well manured, it will grow well and bear any amount of exposure.

9. Attempts have been made to rear Europe flowers and vegetables, but hitherto with but little success; the seeds are either destroyed by insects, or the plants prove weakly and rarely come to maturity.

10. Tapioca has been extensively planted; the average yield from 100 square yards being about nine piculs, producing one picul of pure tapioca, of which the market price is at present two dollars. A project is now being carried out for extracting oil from the seed; should it prove successful, the cultivation of the plant ought to prove more remunerative. Of late the attention of the villagers has been much given to the formation of cocoanut plantations; a small quantity of salt placed round the nut when planted, or round the root of the tree when it is of about two years' growth, is supposed to strengthen the plant and improve the flavour of the fruit.

11. At most of the police stations small nurseries and gardens have been formed, but hitherto, consequent on the numerous changes that have taken place amongst the police force, they have not flourished as well as could be wished.

12. The long expected Land Act having been passed, ere long possibly many of the present holders of land on commutation deeds will take advantage of the option now given of becoming freehold proprietors, and be thus induced to take a deeper interest than heretofore in the progress of agriculture.

PART II.—SURVEY.

1. The amount of work performed in this department, as detailed in the Return annexed, is, as usual, creditable.

2. At Singapore and Penang considerable exertions have been made to induce squatters to take out the necessary grants, and to recover purchase-money due by grantees. At Malacca, consequent on the introduction of the provision of Act XXVI. of 1861, the Survey establishment has been employed principally in preparing surveys of land occupied by squatters, whose applications for purchase have been duly registered.

3. With reference to Section VII. of Act XXVI. of 1861, the Surveyor General and the Government surveyor, Malacca, have been appointed Commissioners for the survey and measurement of land at Malacca.

4. The Native Assistant Surveyor in charge of Penang Hill having been detected in taking money from the Chinese squatters, upon whom he had been directed to serve notices

notices to appear at the Land Office, was dismissed from the service of Government. The assistant surveyor in Province Wellesley has been permitted to resign his appointment.

PART III.—MUNICIPAL.

1. At at all three stations in the Straits Settlement there has been a marked increase in the receipts of the municipalities, the amount of which is shown in the following comparative Table of receipts and disbursements:—

RECEIPTS.

	1860-61.	1861-62.	INCREASE.
	Dollars.	*Dollars.*	*Dollars.*
Singapore	99,146	113,038	13,892
Penang	55,622	57,983	2,361
Malacca	13,720*	14,648*	928
TOTAL DOLLARS	168,488	185,669	17,181
OR RUPEES	3,70,673	4,08,471	37,798

DISBURSEMENTS.

	1860-61.	1861-62.	INCREASE.
	Dollars.	*Dollars.*	*Dollars.*
Singapore	87,128	111,706	24,578
Penang	54,855	55,788	933
Malacca	13,970	14,346	376
TOTAL DOLLARS	155,953	181,840	25,887
OR RUPEES	3,43,096	4,00,048	56,951

SINGAPORE.

1. The undermentioned gentlemen have formed, with the two official members, the Municipal Board at this station.

William Henry Read, Esq.
Samuel James Gardner Jellicoe, Esq.
Charles Hercules Harrison, Esq.

2. The following disbursements were made by the Commissioners:—

Police.

	Dollars.
Expenditure in maintenance of police force, including magistrate's establishment	42,026
Contingent charges	1,070

Establishment.

Commissioner's official establishment	6,461
Contingent charges	1,627

Conservancy.

Fixed salaries	2,315
Contingent charges	725

New Works.

Roads and bridges, including special repairs to Campong Java road	10,437

Maintenance

* Including the annual payment of 9,000 rupees made by Government.

Maintenance of existing Works.

	Dollars.
Roads	22,792
Bridges	727
Landing places	426
Drainage	735

Miscellaneous.

Sweeping and cleansing the town	8,936
Lighting the town	2,478
Watering the town	938
Interest on loans	6,270
Ordinary contingent expenses	3,743
TOTAL	*Drs.* 111,706

3. The most satisfactory feature in the municipal accounts is the great increase that has taken place in the assessment on houses, the amount entered under that head being 8,936 dollars in excess of the sum received in 1860–61, showing that, although there has been of late a reduction in rents in some quarters, it has been more than counterbalanced by the general enhanced value of house property.

4. There has been a considerable decrease in the assessment on land owing to the abandonment of several pepper and gambier plantations in the interior of the island.

5. The new works completed during the year most deserving of notice are Kim Sing's road with its substantial bridge over the river, Chancery-lane, and D'Almeida's road, all useful lines of communication.

6. All the old roads have been put into a state of excellent repair, and lines of young trees planted along several so as to form cool and shady avenues. Final arrangements have been made for putting up the new iron bridge across the Singapore river, and the work is now in progress.

7. Towards the close of the year a civil engineer arrived from India to take charge of the municipal works; his attention has been directed to the preparation of plans and estimates for the proper drainage of the town.

PENANG.

1. The Board, in addition to the usual official members, was composed of the following gentlemen, the first of whom only was nominated by election, the two latter having been appointed on failure of acceptance of office by elected Commissioners:—

James Lamb, Esq.
John James Erskine Brown, Esq.
George Scott, Esq.

2. The disbursements during the year have been as follows:—

Police.

	Dollars.
Maintenance of police force, &c.	33,360
Pensions	81

Establishment.

Commissioner's official establishment	4,726
Commission and contingencies	974

Charges General.

Aqueduct department	2,105

Conservancy.

Fixed salaries	1,766

Road Department.

Fixed salaries	4,950
Boat establishment	2,222
Cart establishment	1,935
Contingencies	1,350

Province Wellesley.

	Dollars.
Salaries	406
Commission and contingencies	1,913
Total	*Drs.* 55,788

3. The excess in receipts in Prince of Wales's Island over those of last year amounted to 3,745 dollars, principally to be attributed to an increase in the police fines and fees, and to the rent of the new market.

4. In Province Wellesley the falling off, aggregating 1,384 dollars, arose in a great measure from the arrears caused by the resignation of one of the collectors, and the delay in the appointment of a successor.

5. The conservancy duties of the town have been performed by a hired establishment under the orders of an overseer, the Commissioners having declined to renew the former contract. The new arrangement appears to answer well.

6. The landing places have been generally improved, but the attention of the Commissioners has been chiefly devoted to the improvement of the water supply; several tanks have been added, and others altered, so as to adapt them more to the convenience of the public.

MALACCA.

1. Consequent on the failure of election, the undermentioned gentlemen were appointed members of the Municipal Board:—

John Henry Velge, Esq.
Thomas Neubronner, Esq.
A. A. De Wind, Esq.

2. The following detailed statement shows the disbursements made by the Commissioners:—

Police Department.

	Dollars.
Fixed salaries	11,184
Contingencies	109

Assessment Department.

Fixed salaries	1,206
Contingencies	375

Conservancy and Public Works.

Fixed salaries	386
Contingencies	1,086
Total	*Drs.* 14,346

3. In the assessment on houses there has been an increase of 357 dollars, and the tax on carriages and horses has also yielded a similar additional sum, a sign of the gradually increasing prosperity of the settlement.

4. The funds at the disposal of the Commissioners do not admit of their making extensive improvements; in the course of the year, however, the road at Tranquerah from the first to the second bridge, as well as a portion of the Mallim road, has been thoroughly re-made and macadamized, and the road from Cooboo to Gajah Berang re-opened; the bridge near the Cooboo police station being built by convict labour.

5. The appearance of the town is being gradually improved by the substitution of tiled for attap roofs under the operation of the Municipal Act (105 houses having been altered during the past 12 months), and the government having contributed towards the purchase of cemeteries beyond the limits of the town, intermural interments have been prohibited.

PART IV.—GAOLS AND HOSPITALS.

SINGAPORE.

1. The grounds attached to the general hospital and lunatic asylum have been tastefully laid out with shrubs, flower beds, and grass plots, which gives them a cheerful and pleasing appearance; measures have also been adopted for providing these institutions

with a due supply of pure drinking water from wells sunk in the neighbouring sandy ridge, though, owing to the percolation of the surface water through the conduit, the desired object has not hitherto been fully obtained, the defects in the masonry are now in course of being remedied. For the use of the shower and plunge baths erected during the year a sufficient supply of water is furnished from the wells sunk immediately in the rear of each of the main buildings.

2. The prevalent diseases in the general hospital have been fever, bowel complaints, and venereal affections; the total number of admissions 786, and of casualties 42, amongst the latter 23 Europeans. At the lunatic asylum the average number of patients has been 119; 43 have been discharged cured, and 17 have died; of these last 12 deaths were caused by cholera, which broke out in the asylum in a very malignant form about the end of March, no less than 41 of the inmates having been attacked.

Tan Tock Sing's hospital has been duly occupied by the Chinese pauper sick; the number of admissions during the year has been 1,018, and of deaths 289. With a view to preserving, as far as possible, the cleanliness of the wards of the main building, a small shed has been erected in its rear for the reception of incurable leprous cases; the average number of its inmates has been 20. In this hospital there were 10 cases of cholera, they were all in the last stage of the disease when brought in for treatment, and died soon after admission.

3. No sickness of any moment has occurred in Her Majesty's gaol. With the object of improving ventilation, as well as of enabling the warders to exercise a better supervision over their charges, iron gratings have been substituted for the panel doors leading from the different wards into the inner galleries.

4. Although the convicts have been a good deal exposed during the year working on the sea-wall, the number of admissions into hospital has been only 1,097, and of deaths 62, equal to a per-centage of nearly 2·93 to strength; this small amount of sickness and mortality is attributed by the senior surgeon to the improvement made in the lines during the past three years; to the more substantial diet now issued to the prisoners, and to the efficient sanatory regulations strictly enforced by the superintendent. The prevailing diseases have been as usual fever, diarrhœa, and rheumatic affections, consequent on the nature of the work on which the men have been employed; there have been several cases of ulcers, but not one of hospital gangrene; there were also some severe cases of disease of the eyes caused by injuries to the cornea from the effects of lime or small pieces of granite; all these, however, did well. There were 14 admissions and 7 deaths from cholera, these were all brought in from outside, not a single case having occurred within the lines, although the disease existed epidemically for upwards of a month in various parts of the town. A work-shed has been added to the hospital in which patients suffering from ulcers and trifling ailments are employed in picking oakum; the monotony of the work prevents malingering, whilst the proceeds are devoted to the purchase of hospital comforts for the more serious cases.

5. The House of Correction having been overcrowded of late, increased accommodation has been afforded by railing off a portion of the convict lines, rendered available by the decrease in the number of convicts, consequent on the Straits having ceased to be a penal settlement. The average number of local prisoners has been 276; there have been only 12 deaths amongst them; these were all old emaciated Chinese with their constitutions thoroughly broken down by dissipation before they entered the gaol.

6. The prisoners have been generally employed upon the different public works in progress, and in the manufacture of rattan chairs, baskets, &c.; the value of their labour being calculated at 8 annas per diem for artificers, and 4 annas for Coolies, may be estimated at 20,655 rupees, whilst the cost of their maintenance during the year has been 15,284 rupees.

PENANG.

1. The number of patients treated in the general hospital has been 256; there have been 29 deaths, the principal diseases have been fever, bowel complaints and ulcers; there were no less than 61 cases of wounds and injuries, of which five proved fatal. Shutters have been put up to some of the lower windows, and some trifling additions made to the stock of furniture. The wards are now most comfortable; the grounds attached to the building have been kept in good order.

2. The inmates of the lunatic asylum have numbered 71, out of whom four have died. Some improvements, much needed, have been effected to the male and female wards.

3. Extensive repairs having been required to the buildings composing Her Majesty's gaol, the opportunity was taken of adding, at comparatively small expense, an upper storey to the main range, not only thereby improving its appearance, but materially increasing the power of the warders to exercise a watchful supervision over the prisoners under their charge. The average number of persons in confinement during the 12 months has been 53, of whom only six have been on the sick list.

4. The

4. The average strength of the convicts has been 1,125, of admissions into hospital the number has been 813, and of deaths 30, giving a ratio of mortality equivalent to 2·66 per cent. Fevers, bowel complaints, and ulcers have been the diseases most prevalent; many admissions have been from trifling ailments caused by the employment of the men in the primitive jungle and swamps in Province Wellesley.

5. Increased accommodation having been much required at the hospital at Butterworth, an upper storey has been added, and the building is now well suited for the purpose to which it has been appropriated; out-offices, however, are still needed to render it complete.

6. The average number of prisoners in the House of Correction has been 106, there have been 115 admissions into hospital. The sick are chiefly the beggars of the place, men suffering from chronic diseases, and taken up by the police as vagrants. The solitary casualty was that of a prisoner belonging to this class, an emaciated Chinese opium smoker, who never performed a day's work during the whole period of his confinement.

7. The value of the labour of the local prisoners, at the rate of 3*a.* 6*p.* per man, has been calculated at 6,263 rupees; the expenditure on their account has been 5,966 rupees.

8. A slight increase has been sanctioned to the salary of the keeper of this prison.

MALACCA.

1. The number of admissions into the general hospital has been 161, and of deaths 29. The prevailing diseases have been fevers, dropsy, rheumatic affections, and ulcers; of wounds and injuries there have been 30 cases, two proving fatal. Consequent on the dampness of the lower floor, caused, it is supposed, by the walls having become impregnated with salt when the building was originally used as a salt godown, the Chinese patients have been removed into a vacant ward in the upper storey.

2. The prisoners in Her Majesty's gaol have been transferred to the new building at Bundar Ellier; it is spacious and well arranged; a suitable establisment of warders, &c., has been attached.

3. There have been 644 admissions and 10 deaths in the convict and House of Correction hospital; a very large proportion of the patients have been suffering from fever contracted in the interior; diseases of the lungs, bowel complaints, rheumatic affections, and ulcers have also prevailed, and there have been 66 cases of wounds and injuries. The average daily number of sick has been 26, and the ratio of mortality to strength 1,069.

4. Although there has not been a single case of beri-beri in any of the civil hospitals, there have been several admissions under this head from the small detachment of Sepoys located at the station; these last have consequently been attributed by the medical officer to attempts to malinger; there being no diagnostics of this disease until the patient has arrived almost at the last stage, it is one most easily feigned.

5. The inmates of the House of Correction have been removed to the buildings formerly used as Her Majesty's gaol, which have been altered and improved for their accommodation. The total number of prisoners in confinement during the year has been 428, estimated at the rate of 12 cents per diem for each man; the value of their labour may be taken at 3,523 rupees, whilst the cost of their maintenance has been 3,092 rupees.

PART V.—CONVICTS.

1. On the 30th April 1862 the convicts at this station numbered 2,055, viz., 1,935 males and 120 females; of the former 339 of the first class reside out of the lines on ticket-of-leave, many being employed as private servants; of this class not a single man has been brought before the police throughout the year.

2. During the past 12 months there have been 131 casualties; of these 101 were carried off by disease, two were murdered, 20 absconded, seven were released (the period of their sentence of imprisonment having expired), and one received a free pardon; the number of additional convicts admitted into the lines during the same period is shown in the following Table:—

Received from Ceylon - - - - - - -	10
Transferred from Malacca - - - - - -	2
Re-apprehended - - - - - - - -	1
Total - - -	13

3. The large number of casualties entered under the head of absconded proceeds from an emeute that occurred amongst the detached party employed on the works at Cape Rachado; 17 of the gang rose in the night upon their petty officers, murdering one and severely wounding three others, and then effected their escape through the Lookoot territories in the direction of Salangore; up to the close of the year they had succeeded in evading detection. Subsequently, however, information has been received of the re-

capture of nine of their number, and the supposed death of seven, leaving only one unaccounted for. On this occasion the petty officers, themselves convicts, appear generally to have behaved well.

4. The health of the convicts has, as usual, since the introduction of the new scale of diet, been remarkably good.

5. A garden has been established at the invalid barrack on Balestier estate; this gives occupation to weakly men, for whom it might be otherwise difficult to find suitable employment, whilst there is reason to hope that in time the arrangement will prove economical by obviating the necessity for the purchase of vegetables. Already, although it has only been introduced within the last three months, 850 lbs. of various descriptions of vegetables have been supplied for the use of the convicts in the lines.

6. The printing press has been found to answer; the Straits Government Gazette has been regularly printed, and all work connected with the different Government offices throughout the whole settlement duly executed at this establishment.

7. The total expenditure in the convict department, including a share of the salaries of the superintendent and assistant superintendent, has been 1,25,099 rupees, whilst the estimated value of manufactured articles and convict labour, at the ordinary rates of 8 annas per diem for skilled artisans, 4 annas for able-bodied, and 2 annas for weakly labourers, has been 1,76,475 rupees, leaving a balance of 51,376 rupees in favour of the State.

8. The Manufacture Account exhibits a balance to credit of 25,028 rupees, the disbursements having amounted to 41,988 rupees, whilst the articles manufactured are valued at 67,016 rupees. At present all materials supplied to the Public Works Department are duly charged for, though at rates far below those ruling in the market, and all expenses incurred debited to the Convict Department.

PENANG.

1. The number of convicts at this station on the 30th April was 1,089, of whom 89 were women and 146 prisoners of the first class.

2. The casualties during the year were 85,—57 from disease, 24 escaped, three released on the expiration of their term of imprisonment, and one transferred to the civil power.

3. The number of men that have absconded is unusually large; in almost every instance the desertions have taken place from the convict body employed in Province Wellesley. This may, in a great measure, be attributed to the temptation held out by the vicinity of the frontier, in the neighbourhood of which they must often necessarily be employed; but it cannot be denied that there must, in some instances, have been great neglect of duty on the part of the convict peons in charge of the gangs from which escapes have occurred.

4. The health of the prisoners has been generally good.

5. The total disbursements for the support of the Convict Establishment, including half the staff salary of the executive engineer, who is *ex-officio* superintendent, have amounted to 68,588 rupees, whilst the value of the convict labour has been estimated at 58,040 rupees, leaving a deficit of 10,547 rupees. This may be mainly attributable to a reduction having been made in the rates at which labour has hitherto been calculated, those now allowed being for artificers 7 annas, petty officers, orderlies attached to departments, and able-bodied coolies 3 annas 6 pie, and invalids 1 anna 9 pie per diem. These rates are less than those credited at Singapore, though possibly, in comparison with the difference in the rates paid for free labour at both stations, the calculation may be correct. Another cause that has led to this result is the diminution in the number of working convicts, whilst the expense of the establishment has remained almost unaltered, no corresponding reduction in its strength having been as yet feasible.

MALACCA.

1. The strength of the convict body at this station on the 30th April was 514, of whom 37 were of the first class.

2. During the year there have been 16 deaths, three transfers to other stations, and 10 discharges, whilst 41 convicts have been received from Ceylon.

3. The convicts generally have been well conducted, and no complaints have been received against any of the gangs working in the interior; several petty larcenies, however, having occurred in the town of Malacca, suspicion attached to a body of invalids permitted to reside outside the lines; the indulgence was withdrawn from several of their number, and the larcenies have subsequently ceased.

4. The health of the prisoners has been good, no case of cholera having occurred in the lines, although the disease prevailed in the town.

5. The outlay on account of the convicts has been 36,514 rupees, and the value of their labour, estimated at *Rs.* 12. 9. 4. per mensem for mechanics, *Rs.* 6. 13. 10. for orderlies and labourers, and *Rs.* 3. 6. 11. for feeble men, may be taken at 41,550 rupees, giving a surplus to the benefit of Government of 5,036 rupees.

6. At

6. At all three stations a suitable scale of labour has been established, and measures adopted for its enforcement, so that the State may receive the legitimate return for its present outlay on convict establishments.

PART VI.—COMMERCE.

1. From the annexed Tabular Statements of the Imports and Exports of the three stations in the Straits Settlement, it is shown that the value of the imports into Singapore during the past year amounted to 55,725,104 rupees, and of the exports to 49,615,529 rupees.

2. In comparison with the returns of 1860-61, there has been a falling-off in imports, chiefly from Great Britain, Europe generally, and North America, to the extent of 2,401,776 rupees; actually the decrease has been greater, as owing to the enforcement of Regulation 3 of 1833, the value of the imports by the Calcutta, China and Java steamers have latterly been duly registered, which was not the case in former years. Of exports there has been an increase to the value of 7,736,781 rupees, the total amount shown being 49,615,529 rupees; but this increase, for the reason stated above, is more apparent than real, except as regards exports to Cochin China; the establishment of the French settlement of Saigon having led to a considerable extension of our trade in that quarter.

3. The commerce of Singapore has doubtless suffered materially from the unsettled state of affairs in the United States of America, and from the rebellion in China; but its retrogression may be principally attributed to the opening of several new ports in China, and other places to the eastward, so that Singapore has ceased to be the great port of transhipment, either for native produce or Europe goods. Vessels from England now pass through without breaking bulk, whilst the native trade is naturally attracted to the nearest marts, by resorting to which it is saved from the expense and exposure of a long voyage.

4. The Malayan Peninsula and the West Coast of Borneo still, however, offer a fair field for commercial enterprise, and provided the tranquillity of the former is preserved, and the piracy by which the latter has been so long devastated fully suppressed, our trade in both directions may be confidently expected to rapidly expand.

5. The value of the imports at Penang is stated to have been 16,887,434 rupees, and of the exports 20,363,653 rupees; as regards the former, the falling off from last year is hardly perceptible, whilst as respects the latter it may be entirely attributed to the almost total cessation of trade with America; a temporary cause which, it is hoped, may ere long be removed.

6. When compared with the returns for 1859-60, the report of the trade of this station is certainly most favourable, and even in comparison with those of 1860-61, it can hardly be said that there has been any decline; for, at the expiration of the year, owing to the dearth of shipping in harbour, a large quantity of produce was in store awaiting the arrival of freight for transmission to England, whilst the decrease in the imports from Great Britain fully compensated by the increase in those from Madras, may be accounted for by the market having been previously overstocked with piece-goods, so that there was little demand for fresh importations.

7. There has been a marked improvement in the trade of Malacca, the value of the imports having amounted to 4,512,099 rupees, and of the exports to 3,535,745 rupees, showing an increase in the former of 355,698 rupees, and in the latter of 589,508 rupees over the returns of 1860-61.

8. There has been a considerable decrease in the quantity of tin shipped at this port; this has been occasioned by the diminution in the produce of the mines at Soongie Ujong, owing to the disturbances alluded to in the Administration Report for last year, and also by the depreciation in the value of the article, the price of tin having fallen from 30 dollars to 26 dollars per picul.

9. In opium there has been an increase, both as regards exports and imports; in the station itself the consumption of the drug is less than formerly, but a greater quantity is now needed for the supply of the inhabitants of the neighbouring native states.

10. Consequent on the failure of the crops, there was a large importation of rice during the year, whilst, as regards tiles, formerly largely exported to Singapore and Penang, at the remunerative rate of from 40 dollars to 45 dollars per lakhsa, there is now no demand even at 18 dollars and 20 dollars. There are no other points connected with the commerce of Malacca requiring special notice.

(signed) *Orfeur Cavenagh*, Colonel,
Governor of the Straits Settlement.

Singapore, 10 July 1862.

APPENDICES to the ANNUAL REPORT on the ADMINISTRATION of the STRAITS SETTLEMENT, for the Year 1861-62.

APPENDIX, No. I.

A RETURN of the Number of CIVIL and CRIMINAL CASES in the Court of Judicature of Prince of Wales's Island, Singapore and Malacca, and of the Fees received during the Official Years 1860-61 and 1861-62.

(i) Only to pay the fee of 1 dollar monthly. The grant from S. F. G. dates from January 1861.

(k) The school under the direction of the Sisters of the Holy Infant Jesus at Malacca is almost entirely gratuitous, or may be seen by the above returns. Only 6 dollars have been paid monthly to school fees up to the present time. The fee charged monthly, when the pupil can afford to pay, is 2 dollars. The school is open to all classes of children. All the other exercises come under from the Convent of the Holy Infant Jesus at Singapore, or from the labour and industry of the sisters and orphans of the convent at Malacca. There is no average of 40 orphans kept gratuitously in the establishment. The sisters of this charitable institution would be thankful to Government should they give them some help and assistance in carrying out their work of eminently christian civilization and regeneration.

E. Macpherson, Lieut.-Colonel,
Secretary to Govt., Straits Settlement.

CHAPTER XVIII.

COORG DISTRICTS.

ANNUAL REPORT on the ADMINISTRATION of the COORG DISTRICTS, during the Year 1861-62.

SECTION I.—CIVIL JUSTICE.

Description of civil courts.

1. THERE are four descriptions of civil courts in Coorg, viz., the Superintendent's Court, the Durryaft Cutcherry Court, and the Courts of Soubedars and Parputtigars; and one Cutwall having the power of a Parputtigar.

Superior courts. Small cause courts.

2. The Superintendent's and the Durryaft Cutcherry Court may be considered the superior courts, and the remainder, viz., eight Soubedars' Courts, and 28 Parputtigars' Courts, as small cause courts.

Jurisdiction of superior and small cause courts.

3. The Parputtigar has jurisdiction in real and personal property, debt, damages, and other civil wrongs up to 100 rupees. The Soubedar in the same manner up to 200 rupees. The Durryaft Cutcherry Court up to 3,000 rupees; and the Superintendent from 3,000 rupees up to any amount.

Appeal how lies.

4. In suits not affecting land, an appeal lies from the Parputtigar's Court to the Soubedar, and from the Soubedar a special appeal to the Durryaft Cutcherry, from whence there lies a species of irregular appeal to the Superintendent; but in the case of landed property, after the special appeal to the Durryaft Cutcherry, there is an extra special appeal to the Superintendent, and again an additional extra special appeal from his decision to the Judicial Commissioner of Mysore.

Decrease in civil business.

5. There is a considerable falling off in civil work this year as compared with last year, viz., a grand total of 674 original suits instituted in the year against 1,044 original suits filed the year previous, showing a total decrease of civil business in all the courts of 370 cases. This decrease is apparent in all the courts but the Superintendent's, where there is an increase by one case over the previous year; but is noticeable chiefly in the Small Cause Courts, and is, I believe, to be accounted for by the introduction, in the month of August last, of stamp rules, viz., Act No. XXXVI. of 1860.

The cause.

Previous to this, fees in lieu of stamps were levied in the Durryaft Cutcherry and Superintendent's Courts; but no fees or costs of any description were leviable in Parputtigars' and Soubedars' Courts. This imposition of fees in cases previously exempted, together with a difficulty experienced by comparatively uncivilized people in mastering the provisions of the Act, will, I think, sufficiently account for the decrease of business in the lower courts, and also account for the lesser number of cases filed in the Durryaft Cutcherry Court; for although fees were previously leviable in that court, yet they were only imposed after deciding the suit, a delay which rather encouraged improvident or litigious suitors, who are now compelled to pause and think before filing a suit, as the institution fee stamp has to be purchased before filing the suit. Again, some suitors hoped to, and perhaps did escape, by alleged or real poverty, absconding, or making away with their property, from paying the fee subsequently imposed upon them; the collecting of which also gave courts and soubedars extra and seemingly unnecessary labour, so that the introduction of stamp rules will, I think, operate most beneficially, and be a fair and litigation-discouraging tax on suitors of all classes in all the courts.

Cases pending at close of year.

6. Including suits instituted in the year, and those pending from the year previous, there were 61 cases pending at the close of this year against 102 cases remaining undecided at close of the year previous, which is nearly the same result as last year, considering the greater number of suits instituted in that year.

Cases how disposed of.

7. Out of the total number of 715 cases disposed of in the year (made up of suits pending in the previous and those instituted during the past year), 637 cases were decided in favour of plaintiff, and 78 cases in favour of defendant; the proportion of decisions in favour of plaintiff being 89·09 against 86·90 the previous year.

Appeal suits, filed, decided, and pending.

8. In addition to the above, 715 original suits were decided during the year, 163 appeal cases were filed against 274 appeal suits for the year previous, and 24 appeal cases remain

as pending this year against 21 appeals remaining undecided for the year previous, which is an unfavourable comparison; both original and appeal business having been less this year. And out of the 160 appeal cases settled in all during the year (made up of the appeals instituted during the year, and appeals remaining from last year)—

In 74 cases the decree of the lower court was confirmed.
In 37 cases it was modified.
In 44 cases it was reversed.
2 cases were sent back for re-investigation, and
3 cases were transferred to the revenue file.

Total - - 160

Centage of appeals on original decrees.

9. The number of appeals during the year bear a proportion of near 22¾ per cent. to the number of original suits decided during the same period, being an improvement over the preceding year, when the proportion of appeals was close upon 28 per cent.

Average duration of appeals, and amount litigated in appeal.

10. The average duration in each case of appeal was 18 days against 10 days for the previous year, and the total amount of value in litigation in the 163 appeal cases filed during the year was 12,379 rupees, giving nearly an average of 76 rupees in each appeal suit.

Average duration of original suits.

Amount litigated.

11. The average number of days occupied in the disposal of each original suit was 19 days, whilst the average last year was but 14 days. The total value of property litigated was *Rs.* 67,850. 8. 9. against *Rs.* 41,105. 14. 7. for the previous year. The average amount litigated in each suit was *Rs.* 57. 3. 11. against *Rs.* 41. 11. 8. for the year previous. Of the above amount in the 715 cases decided, *Rs.* 47,111. 15. 7. was decreed to be due, and *Rs.* 6,186. 9. 1., or about 11½ per cent. was disallowed. The proportion of suits to population is about one suit to 175 persons, and descending to further particulars, it gives about the sum of *Rs.* 1. 11. as litigated by each inhabitant.

Court cost or fees.

The sum imposed as fees on suitors in the Superintendent's and Durryaft Cutcherry Courts amounts to *Rs.* 746. 13. 11.; of this sum *Rs.* 690. 5. 9. was recovered, leaving a balance of *Rs.* 56. 8. 2. to be recovered.

Suit by what courts decided.

12. The Table below shows by what courts and in what proportions the civil work of the year has been carried on:—

CLASS OF COURTS.	Original Suits decided.	Appeal Suits decided.	Total Original and Appeal Suits decided.
Superintendent's Court	1	56	57
Durryaft Cutcherry Court	30	50	80
Soubedars' Courts	267	54	321
Parputtigars' Courts	417	-	417
TOTAL	715	160	875

Classification of original suits.

13. The 715 original suits disposed of during the year, and the 61 cases remaining in arrears at the end of the year, are classified as follows:—

NATURE OF SUITS.	Decided.	Remaining.
I.—Suits affecting Land:		
Merasy rights	—	—
Landed property	12	10
House property	12	1
Mortgages	2	—
TOTAL	26	11
II.—Personal Suits:		
Debts	558	39
Division of property	14	3
Personal property	27	—
Cattle	13	1
Security	36	3
Wages	28	—
Caste disputes	—	—
Damages	13	4
TOTAL	689	50
	26	11
GRAND TOTAL	715	61

Suits

Suits affecting division of property may be considered as mixed suits, so that the proportion of suits for landed property to personal suits is about 4 per cent.

Classification of suits in appeal.

14. The 160 appeals disposed of during the year, and the 24 appeal suits remaining pending at the close of the year, are classified as follows:—

NATURE OF SUITS.	Decided.	Remaining.
I.—Suits affecting Land:		
Merasy rights	1	—
Landed property	26	8
House property	5	2
Mortgages	1	—
TOTAL	33	10
II.—Personal Suits:		
Debts	85	8
Division of property	4	2
Personal property	15	1
Cattle	11	—
Security	4	—
Wages	6	1
Caste disputes	—	—
Damages	2	2
TOTAL	127	14
	33	10
GRAND TOTAL	160	24

Civil debtors.

15. There were in all four civil debtors imprisoned for debt during the year. None, however, remained in confinement at the end of the year as for a longer period than 19 days, the average of imprisonment being 10 days, having all of them satisfied their creditors, and obtained their release.

Judicial.

16. The amount realized by the sale of stamps, since their introduction into the district up to the end of April 1862, was 3,691 rupees, but I am unable to ascertain how much of this stamp paper was used strictly in judicial proceedings and pleadings.

General remarks.

17. The numerical results detailed above, though not quite satisfactorily contrasting with the previous year, yet on the whole do not appear to be unfavourable.

SECTION II.—CRIMINAL JUSTICE.

PART I.—PENAL STATISTICS.

Criminal statistics.

18. The criminal statistics of 1861-62 will be found tabulated in the annual statement on the subject, which accompanies. The filling up of column 3, viz. "Total Crimes, the Perpetrators of which have not been apprehended," seems to have been misunderstood, as this column appears as a blank, and it is now too late to call for the requisite information from the talooks and rectify the error. For the same reason column 1, viz. "Total Crimes, the commission of which has been brought to notice," will also be incorrect.

Superior and subordinate criminal courts, and their powers.

19. The superior and subordinate criminal courts are presided over by the same officials as dispense civil justice. Neither Parputtigars, Soubedars, nor the Durryaft Cutcherry Court have independent jurisdiction of their own in criminal cases. Parputtigars and Soubedars cannot decide upon the simplest case of theft; but in petty offences, such as assault, using abusive language, being drunk, and the like, they have the power to fine up to five and 10 rupees respectively, and only in the case of default in payment can they imprison, viz., up to 10 and 14 days respectively. Similarly the Durryaft Cutcherry Court can inflict a fine up to 20 rupees, or in default to award up to two months' imprisonment; and the Durryaft Cutcherry can only take up and try such criminal cases as are referred to them by the superintendent, when they can award punishment up to two years' imprisonment, subject, however, to the superintendent's approval and confirmation. The superintendent has power to fine to the extent of 30 rupees, and imprisonment for seven years. Sentences requiring a severer punishment can only be awarded by the Judicial Commissioner of Mysore.

CHAP. XVIII. Coorg Districts.

Abstract of Crime.

20. The table below is an abstract of the usual annual statement, altered to show the state of crime for the year under review, and which includes eight cases pending from the previous year, as also to exhibit a comparison of the same with the year previous; but owing to the error before noticed, the table has reference only to traced or discovered crime.

No.	CRIME.	1860-61.	1861-62.	Increase.	Decrease.

Review of the above.

21. The prisoner in the single murder case was charged with murdering his wife by strangling her. He was, however, acquitted of the charge, and the evidence tended to prove it was no murder, but that the deceased had committed suicide by hanging herself. The prisoner in the manslaughter case was also acquitted. His wife charged him with purposely striking her and her child with a stick, the blow of which caused the death of the latter; but it seemed, rather, that in a quarrel with each other the mother fell, and thus caused the death of the child. In the case of infanticide, the court only brought the prisoner in as guilty of the concealment of the birth of her child, which was born dead, under extenuating circumstances. The prisoner charged with rape was also acquitted of the charge, and convicted only of a drunken assault. The two cases of wounding with a knife were not serious. In the forgery case, also, the prisoners were ultimately acquitted by the Judicial Commissioner. Robbery has increased by three cases, but there have been no highway robberies during the last year. The remaining cases do not call for any particular remark; nor does the net increase, viz. 23, in the category of crimes, seem to require further notice than what can be observed on the face of the above table; and though there is an increase by 17 in thefts, they were not, however, of a serious nature.

Petty offences.

22. The number of minor or petty offences has increased by 143, viz., 820 offences against 677 for the year previous.

Average of crime to population.

23. Assuming the total population of Coorg to be 118,352 souls, the number of cases of crime ascertained to have been committed will bear a proportion to the population as follow:—Those crimes which are detailed in paragraph 20, as 1 to 1,690 souls; and petty offences, as 1 to 144; the total of crime and offences giving an average of one offence to 133 souls.

Systematised crimes.

24. I believe it may fairly be alleged that there is nothing like organized crime in Coorg. Wuddurs, and some particular sects of jungle tribes, appear to be the chief perpetrators of crime. Regular cattle lifting seems also unknown, and it has before been noticed that there have been no gang robberies last year.

Stolen property.

25. The value of property stolen is computed at *Rs.* 1,161. 14. 9.; of which sum *Rs.* 793. 8. 5., or about 68 per cent., was recovered. The year previous, *Rs.* 756. 10. 10. was stolen, and *Rs.* 306. 4. 5., or 40 per cent., recovered, which tells favourably for the year under report.

26. Eight

26. Eight criminal cases remained undisposed of at end of the previous year, and 13 cases remained undisposed of at end of this year. The criminal work disposed of during the year may thus be classified, and the per-centage of convictions shown as follows :— Criminal work.

Classification of Crimes and Offences.	Number of Crimes.	Number of Prisoners.	Number Convicted.	Number Released.	Per-centage of Convictions.
Crimes against the person - -	17	59	44	15	74
Crimes against property - -	53	124	72	51	58
TOTAL - - -	70	183	116	66	63
Minor offences - - - -	820	1,297	1,173	124	90
GRAND TOTAL - - -	890	1,480*	1,289 A	190 B	87

27. The statement below shows by what courts the above prisoners were convicted or released, as also the number of criminal cases disposed of by the several criminal courts. Courts awarding punishment.

DESCRIPTION OF COURTS.	Convicted.	Released.	Number of Cases.
Tried by Superintendent with Punchayet, and sentenced by Judicial Commissioner - - - - - - -	- -	1	1
Tried by Durryaft Cutcherry and Soubedars, and sentenced by Superintendent - - - - - - - - -	131	66	88
Tried and sentenced by Durryaft Cutcherry, with approval of Superintendent - - - - - - - - -	48	44	51
Tried and sentenced by Soubedars, being minor offences -	422	28	280
Tried and sentenced by Parputtigars, being minor offences -	677	49	470
TOTAL - - -	1,278	188	890

N. B.—The total of 1,278 and 188 amounts to 1,466, to which if be added the discharged prisoner will make 1,467, as shown above by the asterisk.*

28. The nature of the punishments inflicted during the year are shown in the accompanying Table :— Detail of punishments.

PARTICULARS of PUNISHMENTS for 1861-62.

	Number.
Hanged and transported - - - - - - - - -	—
Imprisonment for 20 years and under 7 years - - - - - -	—
Imprisonment for 5 years - - - - - - - -	2
Imprisonment for 3 years - - - - - - - -	—
Imprisonment for 2 years - - - - - - - -	9
Imprisonment for 12 months and under - - - - - -	8
Imprisonment for 6 months - - - - - - - -	8
Imprisonment for 3 months - - - - - - - -	20
Fined - - - - - - - - - - - -	1,117
Flogged - - - - - - - - - - - -	—
Dismissed - - - - - - - - - - - -	2
Fined, or imprisoned up to 14 days in default, in lower courts - -	92
Total - - -	1,258
Required to furnish security - - -	20
GRAND TOTAL - - -	1,278

Flogging, as a punishment for crime, is not sanctioned in Coorg. Flogging.

29. Two

* If from 1,480 be deducted 1 prisoner discharged, totals of A and B will amount to 1,479.
From 1,480 prisoners 13 must be deducted, as being concerned in more cases than one, thus leaving a balance of 1,467 prisoners.
A. In the same manner, 11 must be deducted from 1,289, leaving 1,278 prisoners.
B. For the same reason, deduct 2 from 190, leaving 188 prisoners.

CHAP. XVIII. Coorg Districts.

Government servants punished.

29. Two servants of Government were dismissed, after criminal trial, during the year, viz. :—

1 Gaol darogah.
1 Gaol mutsuddy.

Casualties.

30. The following statement exhibits the casualties for the year under report, and comparison of the same with the year previous :—

	1860-61.	1861-62.	Increase.	Decrease.
Suicides	4	4	—	—
Accidental deaths	30	25	—	5
Total	34	29	—	5
Net decrease	—	—	—	5

Criminal fines.

31. The total criminal fines for the year under report, amount to *Rs.* 2,787. 13. 3.

General remarks.

32. The introduction hereafter of the penal code will, I think, cause a more correct classification of crime, especially for the purpose of comparison. The year under review appears an ordinary one as regards crime, and the general result detailed above may perhaps be considered satisfactory.

PART II.—POLICE.

No regular police establishment.

33. There is no regular separate police establishment in Coorg, the ordinary routine duties of police being performed by the Peon establishments attached to the several cutcherries or courts. Their total number, which includes duffadars, dalayets, peons and colcars, and the establishment attached to the coffee hálut and forest departments amounts to 258, and their total monthly cost to 906 rupees.

Jummah ryots perform various police duties.

34. There is a class, however, of the Coorg population called jummah ryots, at present 3,771 in number, who, in return for a comparatively light assessment, and the privilege of claiming uncultivated land under certain restrictions and conditions to, it would appear, an indefinite extent, upon "jummah" tenure (a word which signifies "birthright," and invests the holder with a certain limited proprietary right in the land), owe and acknowledge a sort of feudal service to the State. In the former rajah's time, this feudal tenure extended to the training in and use of arms for actual military service, whilst in various other ways the jummah ryots were at the disposal of the State. Latterly, however, their services have only partially been availed of in escorting prisoners and treasure to the Sudder station, and generally assisting the cutcherry establishments in arresting offenders, keeping guard over them, and such like duties, as well as in various revenue and miscellaneous matters. Within my short experience I have seen large numbers of these ryots turn out armed to apprehend a sepoy who had escaped from military custody, and on another occasion a jummah ryot seized a yerrawar lurking in the jungles, which led to the apprehension of two of his accomplices, and all three were subsequently convicted of robbery.

Their cost.

It is difficult, and perhaps unadvisable, to estimate the cost of these jummah ryots. They hold 8,59,405 butties of land, for which they pay an assessment to Government of *Rs.* 45,217. 6. 11. Captain Le Hardy calculated that a jummah ryot, on an average, paid from 19 to 25 per cent. of the gross produce of his farm to Government. Besides, it would take many years before their lands would realize much more by any other mode of assessment, supposing their jummah rights were not indefeasible. Captain Martin writes, that their "privileges cannot be commuted simply for an immunity from such (*i. e.* police) duties, as they are dependent upon long established and irrevocable rights;" and to continue quoting from Captain Martin's letter, as explanatory of the head of police—"It may be said that there is no directly paid establishments for police purposes in Coorg. The police of the country are, and have been from time immemorial, the jummah ryots, who, from the circumstance of their enjoying certain privileges above their fellows, are required to perform the service of police."

Their privileges.

Their duties and efficiency.

"These ryots are summoned at a moment's notice in any numbers, and from their local knowledge, their training to arms, their habits and characters, and from the peculiar nature of the country, no body of police could be conceived more thoroughly efficient, either for detective purposes or for the suppression of disturbances, while at the same time they are perfectly inoffensive to the peaceful inhabitants of the country. It is no hardship to them to perform such services, and no system could be devised which would afford more comfort and confidence to the people."

Village police.

35. The statement below shows the remuneration to village potails and inferior village servants, either in ready money or remissions in assessment. The duties of these potails and

and village servants are much the same as in other parts of India, so that a moiety of the total cost is properly chargeable to the police.

REMUNERATION.

No.	NATURE OF REMUNERATION.	Rs. a. p.
139 (*a*)	Potails enjoying land on joree tenure, assessed at - -	1,811 12 10
340 (*b*)	Potails drawing money allowance of nine pie per four rupees of revenue collected - - - - - - - -	1,334 1 7
479	Total of potails—Total of remuneration being - - -	3,145 14 5
93	Coolwadies, or village servants, enjoying land free of rent, amounting to - - - - - - - - -	497 2 –
131	Coolwadies, or village servants, enjoying land on joree tenure, assessed at - - - - - - - -	355 12 1
224	Total of Coolwadies—Total remuneration being - -	852 14 1
703	GRAND TOTAL of potails and coolwadies - - GRAND TOTAL of remuneration being - - - - -	3,998 12 6

(*a*) These are potails beyond the barriers of Coorg; they hold lands mostly proportioned to the size of village, and amount of collections. Their office is hereditary, and they enjoy, in addition to the above, a few local, and, it is believed, voluntarily paid perquisites, the most valuable being donations on occasions of marriages in the village. Remarks on remuneration.

(*b*) These are potails within the barriers, drawing a money allowance on the amount of the collections realized from their respective villages, and who enjoy no other perquisites. Their office is not hereditary, being elected by the people, subject to circar confirmation.

It will be noticed from the total number of coolwadies that more than half the villages of Coorg have no other village official than the potail, whose remuneration, particularly in villages within the barriers, is but scant.

36. The pay of the stipendiary peons is not commensurate with the great increase in the rate of wages in these parts, and which must eventually prove a drawback to their efficiency. Their number too might perhaps be advantageously increased, on looking at the increasing population in towns and their growing importance; a system of town police might be found to prove beneficial to the interest of the communities of some of the most thriving towns. Stipendiary peons. Town police.

37. The stipendiary peons are too few in numbers, and comparatively too unimportant to give rise to complaints against them by the inhabitants of the country. Reasons have been shown above accounting for the popularity of the jummah ryots; and the general working and efficiency of the police, as at present constituted, will be better gathered and appreciated from a perusal of the criminal statistics than from any detailed observations. General remarks.

PART III.—GAOLS.

38. In all, 80 prisoners were received into the Sudder gaol during the year, the daily average being 56. The year previous the daily average was 40 prisoners. Gaol report.

39. The Table below is a comparative statement of gaol expenditure for last year and the year previous:— Gaol expenditure.

ITEMS.	1860–61.	1861–62.	Increase.	Decrease.
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Permanent gaol establishment and guards.	1,236 – –	1,230 15 4	– –	5 – 8
Contingent gaol guards - - -	251 – 6	334 11 8	83 11 2	—
Total cost of dieting - - -	949 10 10	1,121 10 3	171 15 5	—
Total cost of clothing - - -	60 3 –	104 14 –	44 – –	—
Total cost of country medicines and hospital charges.	3 10 2	37 9 11	33 15 9	—
Total - - -	2,500 8 6	2,829 13 2	334 5 4	5 – 8
Net increase - - -	– –	– –	329 4 8	—
Average annual cost of prisoners per head.	62 8 2	50 8 6	—	—
Net decrease in annual cost - -	– –	– –	– –	11 15 8

Though the total expenditure is in excess of last year, yet it has been only in necessary items, consequent on the increased number of prisoners; and the total comparison of

expenditure to number of prisoners will be seen to be very favourable for the year under review.

Average cost of each prisoner.

40. The form below is a detail of each prisoner's actual cost yearly to the State, already treated of generally in the preceding paragraph:—

ITEMS.	Average Yearly Cost per Head.			
	1860-61.	1861-62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Average cost of permanent gaol establishment and guards.	30 14 9	21 15 9	- -	8 15 -
Average cost of contingent gaol guards	6 4 5	5 15 7	- -	- 4 10
Average cost of dieting - - -	23 11 7	20 - 7	- -	3 11 -
Average cost of clothing - - -	1 8 -	1 13 10	- 5 10	—
Average cost of country medicines and hospital charges.	- 1 5	- 10 9	- 9 4	—
Total - - -	62 8 2	50 8 6	- 15 2	12 14 10
Net decrease - - -	- -	- -	- -	11 15 8

Comparison of same with the previous year.

It will be seen from this that the average cost of each prisoner per head per annum has been reduced from *Rs.* 62. 8. 2. to *Rs.* 50. 8. 6., and that the improvement is to be noticed under all the heads except medicines and clothing. The increased cost here seems owing to more attention being paid to the comforts of the sick, and not from an increase of sickness, the rate being more favourable for the year under report, viz., a per-centage of 2·75 sick against 3·56 for the previous year. The decrease in diet is owing to certain gaol provisions being cheaper last year than the year previous, especially in the matter of paddy, where, owing to the greater cheapness last year, the saving in this item of diet alone, computing at the former year's prices, is about *Rs.* 2. 12. per head. And there being a greater number of prisoners over which to divide the cost of gaol establishment, and permanent and contingent gaol guards, will explain the favourable decrease under those respective heads.

Cost of feeding and guarding prisoners.

41. The above form thus shows that the cost of physicking, feeding and clothing each prisoner has been *Rs.* 22. 9. 2.. whilst the cost of looking after and guarding him was *Rs.* 27. 15. 4.; but this latter charge will proportionately diminish as prisoners increase, and seems to be the only one susceptible of a decrease; and it is necessary to observe here that, in addition to the ordinary gaol guards there is also a military guard stationed at the gaol, the presence of which doubtless tends to the safe custody and good conduct hitherto characterising the working of the gaol.

Military guard.

Health, &c. of prisoners.

42. The number of deaths in gaol during the year was two, or 3·37 per cent.; the year previous there was but one death among the prisoners, being 2·50 per cent. The sickness too has been slight both last and previous year, averaging in both years under 4 per cent., or, as before stated, 2·75 per cent. last year against 3·56 the previous year. The total of sickness and death is 6·32 against 6·06.

Prisoners' work, or how employed.

43. There are no gaol manufactures, neither is industrial or educational instruction afforded. The prisoners were chiefly employed in keeping the gaol and cutcherry grounds clean, repairing roads in the vicinity of Mercara, cutting and bringing in fuel, and leaf platters for their own use, making charcoal (a considerable quantity of which is used in the cutcherry to preserve the records and papers from the great damp in the monsoon), and also, among other minor works, in planting and watering a small roadside avenue of trees.

Value of prisoners' labour.

44. The value of prisoners' labour here, where wages are high, even if taken at half the rate of that of an ordinary free labourer, will give an average of about 30 rupees as the yearly value of each prisoner's labour.

Miscellaneous prison particulars.

45. The Table below gives a few miscellaneous particulars regarding the 80 prisoners of last, and the 43 prisoners of the year previous.

YEAR.	Sex of Prisoners.				Total.	Previous Convictions.	First Convictions.	Total.	Who can read and Write.	Ignorant Prisoners.	Total.	Per-centage of previous Convictions.	Per-centage of reading and writing Prisoners.
	Men.	Women.	Boys.	Girls.									
1860-61 - -	37	6	-	-	43	2	41	43	2	41	43	4·65	4·65
1861-62 - -	75	5	-	-	80	6	74	80	16	64	80	7·50	20·00

The

The per-centage of previous convictions is rather heavy for the year under report, but four out of the six previously convicted prisoners were concerned in one case, viz., of serious assault when under the influence of liquor, having been convicted of an almost similar offence under similar circumstances the year previous. These four persons can also read and write; so could four in the forgery case, three in a case of swindling, and one in cattle stealing, which makes up 12 out of the above 16; but altogether the inferences to be deduced from the per-centages are to be regretted, as indicating the prevalence of crime amongst those who should know better.

Escapes.

46. One prisoner, whilst occupied in out-door labour, effected his escape, but was recaptured the same day.

General remarks.

47. The conduct of the prisoners has been generally good, and there has been no infringement of gaol regulations brought to notice.

SECTION III.—REVENUE.

PART I.—LAND REVENUE.

Jummabundee settlement.

48. The Jummabundee settlement of the year under report was commenced on the 21st October 1861, and concluded on the 30th March 1862.

Nature of land tenure.

49. The tenure of land in Coorg is somewhat peculiar and singular for India, so I beg to transcribe, as far as the 74th paragraph, some interesting particulars on the subject, gathered from Captain Le Hardy's Jummabundee Report for 1834-35.

Arable land, how divided.

50. The whole of the arable land of Coorg is divided into farms, averaging in extent, according to the nature of the land, from 25 and 70 butties* to 1,500 butties of wet land, besides a large quantity of high land bearing no assessment, attached to the farms. This unassessed dry land is divided into two classes, called "banny" and "barakay;" the former term being applied to high forest land, from which the farm is supplied with firewood, manure, grass, &c.; the barakay is a low, swampy, inferior description of soil on which the cattle are turned out to graze. This banay and barakay compose the greater portion of most farms. Though seldom more than a small garden patch of vegetables and plantains adjoining their houses was cultivated by the Coorgs in former times, the other castes planted small patches of chilies and tobacco; but now a considerable portion of the banay is everywhere planted with coffee, plantains and oranges, the cultivation of which is still extending.

Banay and barakay.

Jummah tenure.

51. Although all jummah ryots enjoy the privilege of claiming land to an indefinite extent upon the jummah tenure of five rupees per 100 butties of wet land, with its accompanying banay and barakay, they can only hold it upon those terms after being invested with the proprietary right to the soil by payment of a nuzzur of rupees, 10 per every 100 butties; this is termed "nuzzur kanakay," and the amount has to be paid to Government in three yearly instalments, besides paying down a fee of one rupee at the time, called "guttee jummah" fee, guttee meaning a lump of earth. In return each jummah ryot receives a handful of the soil of the land he applies for, and a formula of words is spoken, intimating that he has received the hereditary proprietary right of the land, with the banay and barakay attached. In the same way when a jummah ryot wishes to give up his farm, he brings a handful of earth taken from the soil of his farm and lays it down before the superintendent, and thereby intimates that he has resigned his farm, and all his rights thereto. Land cannot be taken on jummah tenure except in entire farms, and on paying rent for the uncultivated as well as cultivated wet fields of which they are composed. When part of a farm only is taken the portion occupied is invariably held by jummah as well as sagoo ryots, on sagoo tenure, and is assessed at 10 rupees per 100 buttees; on which terms most jummah ryots cultivate pieces of land in addition to their hereditary estates, which latter, as before-mentioned, are assessed at five rupees per 100 butties of land.

Jummah tenure.

52. No remission is ever made from the assessment of ryots holding land on jummah tenure, except in any very extreme cases of calamity. They may, however, claim remissions when the produce of their land has been so meagre as to render it advantageous to them to hold their estates on sagoo tenure, viz., paying 10 rupees per 100 butties for the quantity of land actually cultivated, instead of five rupees per 100 butties for the whole farm.

Jummah ryots.

53. Jummah ryots have also a right to be assessed on the same terms as sagoo ryots, when owing to the want of means, less than half the land of which their estates are composed has been cultivated. Jummah ryots also pay dhooly batta and house-tax.

Sagoo tenure and sagoo ryots.

54. Sagoo tenure at 10 rupees per 100 butties was the assessment originally fixed by Veerajainder on the whole of the arable wet land within the barriers of Coorg. But the aborigines of the Coorg caste have never paid this amount of rent, except under peculiar circumstances, or if found guilty of the commission of heinous crimes, when they were at that time disfranchised and disgraced by being transferred to the second class of sagoo ryots. Sagoo tenure is only applicable to inhabitants of other castes, who, not being deemed

* For an account of the Coorg butty, *see* page 713.

deemed qualified to carry arms in the service of the rajah, were called upon to pay the full amount of this tax. This class of sagoo ryots were, however, in the rajah's time, required to perform all other services not of a military nature. These ryots also pay dhooly batta and house-tax.

Sagoo ryots, 2d class. This class now abolished.

55. Sagoo ryots of the second class paid 12 rupees for 100 butties, and were exempt from the payment of dhooly batta, but paid house-tax. This class does not at present exist, having been transferred in 1835 to the first class. Originally most ryots holding under sagoo tenure were of the first class; but in Veerajainder's time being transferred to this class from the first, or in other words, paying 12 instead of 10 rupees per 100 butties, minus the dhooly batta tax, exempted the ryot so transferred from the performance of many services to the then State; consequently the majority of ryots come into this class. Latterly however, the circar service seems to have increased, so that the distinction was lost sight of, and both classes of sagoo ryots appear to have had to perform the same duties.

Sagoo tenure continued.

56. Lands under sagoo tenure have also attached to them the banay and barakay referred to in paragraph 50. Sagoo ryots pay only for the fields which they actually cultivate, and they are considered entitled to a remission of part of the rent of such lands as may have yielded a scanty crop. This, however, may be considered the ancient custom, as the practice now is, and seemingly very properly so, only to grant remissions in extreme cases.

Oomlee tenure.

57. Land is held on oomlee tenure at three different rates, viz., 3, 2½, and 1 rupee per annum per 100 butties. Estates were granted on these terms as a reward for service, the possessors, however, having to pay the same demands as jummah ryots in respect to dhooly batta and house-tax.

Land free of tax.

58. Persons holding land free of tax are exempted from the payment of all other circar demands, and they are allowed to sub-let their lands, but only on the common sagoo tenure, viz., 10 rupees per 100 butties, without imposing dhooly batta or house-tax.

Above tenures relate to land within the barriers.

59. The foregoing tenures are applicable to the whole of the country within the barriers of Coorg, including Kiggutnaad, but they do not affect Yelloosaweraseemay, or the small patch of country at the foot of the ghauts.

Yelloosaweraseemay land tenure.

60. The whole of this talook is, in the same manner as lands within the barriers of Coorg, divided into vergas or farms, which are composed of wet and dry lands, in about equal proportions. The assessment being supposed to be regulated at 1-6th of the estimated produce of the former, commuted into a money-rent of 5 butties of paddy per 4 rupees.

Ryots of Yelloosaweraseemay.

61. The ryots of Yelloosaweraseemay are divided into two classes, one consisting of the original inhabitants, by whom the greater part of the land is held direct from Government; the other is for the most part composed of emigrants and poorer description of ryots, who hold the land on "warum" tenure, *i. e.*, sharing the gross produce with the landlord; but this sub-letting is at variance with the older customs of Coorg.

Sub-letting.

Proportion of dry arable attached to wet land.

62. The proportion of dry arable land attached to a piece of paddy ground, assessed at 16 rupees, varies from 1 to 2½ cawnies, and the value of its gross produce, consisting generally of raggee, horse gram, or ginjely seed, is estimated at from 4 to 9 or 10 rupees. This portion is never assessed, except when taken for cultivation without the wet land, in which case it is held from the circar on "warum" tenure.

Grazing and forest land.

63. Waste, grazing, and forest land is not, as within the barriers of Coorg, attached to estates; but is considered as common to the village to which it belongs.

Pay house tax, but not dhooly batta.

64. The ryots of Yelloosaweraseemay talook are not called upon for dhooly batta, but they pay house tax.

Dry land within and beyond the barriers.

65. Excepting a few fields, there is no assessed dry land within the barriers of Coorg, dry cultivation prevailing only in Nunjarajputten, Ramasawmy Canaway, and in the northern part of Yelloosaweraseemay, where there is a scarcity of water for the purpose of irrigation. Its extent in these talooks is calculated at about 13,000 cawnies, assessed at about *Rs.* 7,478. 1. 10., the greater part of which has been brought under cultivation since the assumption of British rule.

Assessments how calculated.

66. The assessment here is calculated at about 1-5th to 1-6th of the gross produce, and the ryots cultivating these dry lands, which produce the same nature of crop as in Mysore, are the worst off in Coorg. The chief reason being that they each cultivate but very small patches of land, though here and there several families cultivate in common a large portion.

Coomaree land.

67. Coomaree cultivation is prohibited in Coorg; raggee is sometimes sown, looking like coomaree cultivation, but it is only preparatory to planting coffee the succeeding year.

Joree land.

68. A large quantity of land has been alienated to the office of the potails of Yelloosaweraseemay and Nunjarajputten, and for maintenance of religious establishments in all parts of Coorg, half the assessment of which has been relinquished by the circar.

Within the barriers, land enjoyed under this tenure differs very little from that which is held by jummah ryots. The amount paid to the circar is the same; it cannot be sub-let, and

and if left uncultivated, it is like jummah land, at the disposal of the district officers, and it may be given by them to ryots desirous of cultivating it on sagoo tenure. The difference in the latter case is, that when so disposed of, half of the assessment is paid to the circar, and the other moiety to the establishment to which it belongs. Another point in which it differs from jummah land is that no assessment is paid for cultivated portions of it. The holders of joree land in Yelloosaweraseemay are allowed to sub-let it on warum tenure, and in that talook the greater part of it is so disposed of.

Dhooly batta.

69. Ryots cultivating less than 25 butties of land pay no dhooly batta; from 25 to 50 butties they pay 3-4ths putta butties of paddy; and from 50 and upwards 1½ putta butties of paddy, excepting in Guddynaad and Yeddavanaad, where they pay 3-40ths of a putta buttie for each rupee of assessment.

Dhooly batta is not paid in Yelloosaweraseemay and Nunjarajputten, excepting in four villages. Neither was it paid by second class sagoo ryots when that class existed.

House tax.

70. The whole of the cultivating classes of the Naads to the south of the Harringhy river, and of Soorlabeemoothnaad to the north of it, pay house tax at the rate of 9 *a.* 7 *p.* per family, and the same amount is paid in the remaining divisions of Coorg by all classes, except pariahs, who in Yelloosaweraseemay, Nunjarajputten, Guddynaad, and Yeddavanaad, pay only half that sum. Merchants and other classes pay according to their caste or trade.

Proportion of gross produce paid to circar.

71. In calculating the proportion of gross produce paid by the different descriptions of ryots in Coorg, one is very apt to exaggerate the total gross produce, so that the following rough calculation is merely given to show the relative advantages enjoyed by each class of ryot. A jummah ryot pays, with dhooly batta, which in no case can exceed 1 ½ putta butties of paddy, valued now at 2 ½ rupees, about 15 per cent. of his gross produce to Government; he also pays house tax, 9 *a.* 8 *p.* A sagoo ryot within the barriers, including dhooly batta, pays in the same manner from 25 to 30 per cent. of his gross produce to Government; he also pays house tax. The sagoo ryots of Yelloosaweraseemay talook are, I believe, in a better condition than the sagoo ryots within the barriers, though those who cultivate as sub-renters to them are necessarily not so; and last of all come the ryots cultivating dry lands, who, for the reason stated in paragraph 66, appear to be the worst off.

By jumma ryots.

By sagoo ryots.

Coorg farms.

72. A Coorg cannot sell his farm, nor even sub-let it, without the permission of the circar, and then it can only be sub-let on warum tenure for a limited number of years, so that, excepting the permission to resign the farm to Government, a Coorg's property in his land may be considered unalienable.

Joint families.

73. In former times several farms constituted one estate, cultivated by the several members of one large family, living under the same roof; but of later years instances occasionally occur of relations dividing the family property and taking separate farms. This, however, can only be done by the consent of all parties; for, according to law or usage, any individual separating himself from the family in opposition to the general wish, can claim no share of the common stock. He is viewed as an outcast by the remainder, and is left to depend entirely on his own resources and industry for the means of livelihood. The most aged is generally regarded as the master of the house; the estate is registered in his name, and the whole of the family property, as well as the services of its inmates, are considered as being at his disposal.

Beginning of division.

74. The Rajahs appear to have rather encouraged, than otherwise, separation of families, probably as a means of decreasing the practice of polyandry, (N. B., this practice is now denied by the Coorgs, but I believe a Coorg may raise up seed to his brother's widow), as well as with the view of extending cultivation. The generality of the Coorgs, however, still view any deviation from this ancient custom with the greatest abhorrence, considering the separation of brothers (under which denomination is comprised the whole of the males of each generation being under the same roof, however distant their connexion), or their forming independent connexions, as the most serious calamity that can possibly befall a family. But estates do appear now to be sometimes divided into their separate farms, and these farms again are occasionally sub-divided amongst the several members of the same family. My information on this point, however, is not satisfactory, and time will not permit of looking further into the question; but I believe former Superintendents have set their faces against sub-division, and issued orders on the subject conformably to what would appear to be the old Coorg custom; and when the evils of sub-division of land, terminating eventually in minute partitions in other parts of India, are considered, perhaps the ultimate condition of the Coorg is bettered by the restriction.

Evils of sub-division.

Retrospect.

75. The above is mostly gathered from Captain Le Hardy's Report altered slightly to bring it down to the present time, and though the sketch is necessarily imperfect, owing to my short residence and personal unacquaintance with particulars, yet I have ventured to give it, and risk some inaccuracies, rather than not attempt some description of the singular and interesting tenures of Coorg, so different to those generally existing in Southern India and the Dekkan. A Coorg's house, nestled on a hill side, partially concealed by plantain, orange, and coffee trees, with his paddy land below, his forest above, and wild scenery around, presents a picturesque and striking scene, may soon become

civilized enough to resist the baneful influence of his increasing prosperity and growing vice, and learn to look upon the retention of his patrimonial acres and education of his children as a sacred duty dearer to him than easily begotten money.

Principles of settlement.

76. The principles of settlement, and the mode of ascertaining the reason for and method of granting remissions are, I think, what may be called, for want of a better name, ryotwarry.

Number of talooks, naads, and villages.

77. The following statement shows the number of talooks, their subdivisions into naads, and the subdivisions of the latter into villages:

No.	NAMES OF TALOOK.	Naads.	Villages.	Khan Villages.	Jagheer Villages.	Uninhabited Villages.	TOTAL.
1	Mercara talook - - -	7	57	57	- -	- -	57
1	Paddynacknaad talook -	5	55	55	- -	- -	55
1	Yeddanacknaad talook -	3	49	49	- -	- -	49
1	Kiggutnaad talook - -	4	63	63	- -	- -	63
1	Nunjarajputten talook -	5	115	105	3	7	115
1	Yelloosaweraseemay talook	3	168	167	- -	1	168
6	- - - - TOTAL - - -	27	507	496	3	8	507

Boundary settlement.

78. I believe there are no disputes regarding village boundaries; both village and naad boundaries having been settled, defined, and recorded in the former Rajah's time, and the "shisht" account, signed by the Rajah's Lingarajendar and Dodda Veerajainder, were referred to, and enabled the settlement of certain isolated disputes that occurred some years back. These shisht accounts are very complete, entering into full details, and will prevent a fertile source of disputes hereafter when land becomes more valuable.

Nature and sources of irrigation.

79. Although wet cultivation forms the chief agricultural element in Coorg, still it is altogether independent of artificial means of irrigation. The paddy land being situated in valleys or hollows between hills, is, in addition to the heavy rains, well supplied with water from mountain and hill streams, and rivulets, the courses of which, or of their minor streams, are dammed up, when necessary, with temporary erections, to raise the level of the water. These dams are of the narrowest and simplest description, and cost nothing beyond a small expenditure of labour in their construction.

Cultivated and cultivable wet land, area, and assessment.

80. The extent of land at present under wet cultivation is estimated at about 21,23,044 butties, assessed at *Rs.* 1,30,156. 5. 7., and about 3,15,658¾ butties is estimated as waste wet land; but for want of water about a lac of butties only is capable of being cultivated. The assessment on which would be about the sum of 10,000 rupees.

Artificial irrigation.

81. There are, however, I am told, five cuttays or small anicuts, erected of brick, with stone aprons, in two different localities of Coorg, where the nature of the country admits of artificial irrigation. Four of these cuttays were erected under native and one since British rule, and have been repaired subsequently, but are understood not to be in very good repair at present.

The following Table will give short particulars of this description of irrigation:—

NAME of TALOOK.	NAME of CUTTAY.	Number of Butties at present Irrigated.	Assessment upon the same.	Number of Butties waste, but susceptible of Irrigation.	Assessment, if Cultivated.
			Rs. a. p.		*Rs. a. p.*
Nunjarajputten	Cheggali Cuttay -	7,475	544 - -	3,756½	375 10 -
Ditto - -	Igoor Cuttay - -	8,911½	582 10 10	3,192½	319 4 -
Ditto - -	Yelakanoor and Hoshully Cuttays.	9,351½	749 12 -	1,113¾	111 6 -
Mercara - -	Uthimugala Cuttay -	8,318¾	579 14 -	2,815	281 8 -
	TOTAL - - -	34,056½	2,456 4 10	10,877½	1,087 12 -

The

The irrigated cultivated land is thus divided :—

	Butties.	Rs. a. p.
Enam land	4,603	—
On sagoo tenure	20,437½	2,043 12 –
On jummah „	4,217½	210 14 –
On oomlee „	1,130	23 4 10
On jodee „	3,567½	178 6 –
TOTAL	34,036½*	2,456 4 10

Three reasons are assigned for there being so much waste, viz., that some of the lands are of a higher level than the existing irrigation channels. That population is but scant in those localities, which is accounted for in the third reason, viz., the extreme unhealthiness of some of the localities. The men being prostrated with fever and spleen disease, and the women bearing few or no children, those that are born seldom living beyond childhood.

Proposed anicuts or cuttays.

82. In 1854 the then Superintendent of Coorg advocated the construction of an anicut across the Lutchmunteertha River, in Kiggutnaad talook; and two more across two nullahs in Yellooswaweraseemay talook, by which means a considerable quantity of land now lying waste might be brought under cultivation. As coffee cultivation extends, the consumption of rice and other grains will be much greater, so that any increase of the quantity of land brought under wet cultivation will be very beneficial.

Cultivated and cultivable dry land, area, and assessment.

83. It is difficult to arrive at the area in acres of dry cultivation; but the present assessment on dry culture only amounts to *Rs.* 9,713. 9. 6; and an extent of land calculated to yield an assessment of but *Rs.* 1,134. 2. 10., is said to be the only cultivable dry waste land remaining. This, however, does not include forests, hills, and jungles.

Cultivating ryots and puttahs.

84. The number of cultivating ryots who have lands of their own, is given below at 11,272; but, by a statement prepared in the office, it would appear that other 7,649 persons are also mostly engaged in agricultural pursuits, giving a total of 18,921 resident persons occupied either directly or indirectly in tilling the soil.

CULTIVATORS.	1861-62.	1860-61.	Increase.
Jummah ryots	3,553	0	0
Sagoo „	6,535	0	0
Oomlee „	347	0	0
Ryots cultivating dry land	837	0	0
TOTAL	11,272	11,208	64

It is not customary in Coorg to grant a paothee or puttah to each ryot, but only a general puttah for the whole village. This general puttah, and a memorandum under the talook authorities' seal is the ryot's title to the land; but jummah ryots hold for each vurga or farm a neeroopa or sunnad under the seal and signature of the Commissioner of Mysore, or of the former Rajahs.

85. The

* So in original.

CHAP. XVIII. Coorg Districts.

Rent-roll.

85. The subjoined statement is an approximate rent-roll for the district:—

RATE OF ANNUAL PAYMENT.	Number of Ryots.	Total Rent.	Average Payment of each Ryot.
		Rs. a. p.	*Rs. a. p.*
From 1 to 10 rupees - - - - -	6,444	33,400 6 11	5 2 11
„ 10 to 20 „ - - - - -	2,881	43,630 10 3	15 2 3
„ 20 to 30 „ - - - - -	1,027	25,494 5 8	24 13 2
„ 30 to 40 „ - - - - -	454	15,229 10 7	33 8 8
„ 40 to 50 „ - - - - -	224	10,266 8 1	45 13 3
„ 50 to 75 „ - - - - -	173	10,574 5 5	61 1 11
„ 75 to 100 „ - - - - -	51	4,398 2 5	86 3 9
„ 100 to 150 „ - - - - -	18	2,049 11 5	113 13 11
TOTAL - - -	11,272	1,45,045 12 9	12 13 10

In a similar average made for one of the Hyderabad Assigned Districts, the total was *Rs.* 20. 12., and the difference between the sum and *Rs.* 12. 13. 4. in some measure represents the difference of assessment, which is much lighter here. There are ryots, it is believed, who pay more than 150 rupees on the whole of their holdings; but which being situated in different talooks have been assessed separately on the individual.

The next form gives the same result, with particulars of the several classes of ryots:—

DESCRIPTION OF RYOTS.	Number.	Total Amount of Assessment.	Average Rate of Payment.
		Rs. a. p.	*Rs. a. p.*
Jummah ryots - - - - - - -	3,558	45,211 15 11	12 11 7
Sagoo „ - - - - - - -	6,535	84,424 14 9	12 14 8
Oomlee „ - - - - - - -	347	6,902 14 4	19 14 3
Ryots cultivating dry land - - -	837	8,505 15 9	10 2 7
TOTAL - - -	11,272	1,45,045 12 9	12 13 10

N.B.—In all the above averages the house tax has been included, viz., *Rs.* 6,757. 11. 10., which distributed over the total number of ryots, viz., 11,272, gives an average payment for each ryot under this head of 9 *a.* 7 *p.* and a fraction.

Talookwar rent-roll.

86. Below is given the same average for each of the talooks, and which may be taken as a fair criterion of their present condition as regards agriculture, Kiggutnaad being the best agricultural talook, and Nunjarajputten and Yelloosaweraseemay talooks the poorest:—

No.	TALOOKS.	Number of Ryots.	Total Assessment.	Average Payment of each Ryot.
			Rs. a. p.	*Rs. a. p.*
1	Mercara - - - - - -	1,278	16,641 7 8	13 – 4
1	Paddynacknaad - - - - -	1,372	17,945 – 7	13 1 3
1	Yeddavanaad - - - - -	1,598	32,364 13 3	20 4 –
1	Kiggutnaad - - - - - -	1,357	35,069 8 –	25 13 5
1	Nunjarajputten - - - - -	2,987	17,441 12 8	5 13 5
1	Yelloosaweraseemay - - - -	2,680	25,583 2 7	9 8 8
6	TOTAL - - -	11,272	1,45,045 12 9	12 13 10

87. And

87. And the following will serve to give an idea of the extent in butties of each ryot's holding :—

Average holding of each ryot.

EXTENT OF HOLDING.	Number of Ryots.	Number of Butties.	Average Holding, in Butties, of each Ryot.
From 15 to 50 butties	3,221	130,096½	40
„ 50 to 100 „	2,397	232,933½	97
„ 100 to 200 „	2,549	486,670	190
„ 200 to 400 „	1,505	558,262½	370
„ 400 to 800 „	522	346,797½	664
„ 800 to 1,000 „	177	167,213½	944
„ 1,000 to 1,500 „	50	68,141¼	1,362
„ 1,500 to 1,800 „	9	14,345	1,593
„ 1,800 to 2,000 „	1	1,961½	1,961½
„ 2,000 to 2,916 „	3	6,786	2,262
„ 3,000 to 4,000 „	1	3,741¼	3,741¼
TOTAL	10,435	20,16,948¾	193*

The total of butties given here excludes jagheer, service, and charitable enams, &c., and does not refer to dry lands, or ryots cultivating them. The dry land measurement differing so that it is difficult to estimate it.

Season.

88. The season for the year under report was a most favourable one. Crops of all descriptions came to maturity at the proper time, and in general yielded an abundant harvest. Rice, the staple product of the country, produced a plentiful crop, except in one locality, where high freshes of the Cauvery partially washed away some paddy fields, and necessitated a small remission. The coffee crop was favourable in some localities and unfavourable in others; but on the whole the yield was a good one. The cardamom crop, though good, was not so favourable as the year previous. And the few dry cereals, such as raggy, horse gram, and buller, and the small quantities of tobacco, mustard and oil seeds, grown to the east and north of Coorg, also produced a very fair out-turn.

Fall of rain.

89. The south western monsoon generally sets in about the latter end of May, and continues up to the end of September, and sometimes into the middle or end of the following month. The rains during the season under report were most plentiful and seasonable. The total rain fall having been no less than 210 inches, whilst the fall in an average year is but from 160 to 180 inches. The natives assert that the monsoons are not so heavy now as they used to be, and ascribe the cause to the vast clearance of forest land on account of coffee cultivation. This is most likely the case, yet the experience of the fall of last year tends in a measure to disprove it.

Sanitary state of the district.

90. The season generally has been healthy throughout, both for man and cattle. Cholera and small-pox were prevalent in but few villages. The chief mortality having been from fever and other diseases. The number of deaths is given below :—

Persons who died of cholera	150
„ of small-pox	53
„ of fever, dysentery, ague, and other diseases	3,377
Total	3,580

The year previous the total number of deaths was given at 3,506. There is a typhoid or low type of fever prevalent among the inhabitants resident in low marshy situations, one of the fatal signs of which is a blackened state of the tongue. Cases of this kind are of frequent occurrence, and often prove fatal. The cause of the disease is assigned to malaria, though a better acquaintance with the disease and cure is very desirable; fever being the depopulating and labour-strickening evil of the country. Maggots in the nostrils, prostrating the patient and often ending fatally, is another fearful disease comparatively unknown to medical science. If the fevers of Coorg could be systematically treated by medical practitioners, incalculable benefits would be conferred on the inhabitants. Much individual suffering would be averted, families would then multiply, and more emigrants be attracted to the place. No murrain has prevailed among cattle. In this respect I believe the country has enjoyed an immunity for some years back, whilst formerly large numbers of cattle were annually swept away by disease.

Future prospects.

91. The prospects of the approaching season are at present favourable, and though but slight showers of rain have as yet fallen, and a fall of about 115 inches is still due, yet they have fallen timely, and there is the general expectation of a mild but good monsoon. In consequence 25,361¼ additional butties of waste wet land have been taken up by the ryots. Considerable quantities of Government and other land still continue to be taken up

* So in original.

up by Europeans and Natives for the cultivation of coffee. The prospects of coffee in the coming season are promising, and the same may be said with regard to cardamoms. In short the state of the country is, and promises still more so to be, one of continued, though perhaps unequally divided, prosperity.

Prices of grain, &c.

92. The Table below shows the selling prices in the four principal marts of Coorg, of its chief indigenous grains and other agricultural products, as well as a comparison of the same with the year previous:—

NAME of TOWN.	Year.	Merchants' Retail Selling Price per Rupee, in Seers of 80 Rupees weight.					Wholesale Selling Price per Candy of 20 Maunds of 27½ lbs. each.	
		Paddy.	Rice, 1st sort.	Rice, 2d sort.	Raggy.	Horse gram.	Coffee.	Cardamoms.
Mercara	1860-61	50	14	18	38	22		
	1861-62	52	15	20	38½	20		
Veerajenderpett	1860-61	45	14	16	28	25	From 110 rupees to 125 rupees.	From 900 rupees to 1,000 rupees.
	1861-62	53	16	17	29	19		
Fraserpett	1860-61	40	14	17½	51	33		
	1861-62	46	14	18	53	20		
Soamawarpett	1860-61	62½	14	21¼	40½	31		
	1861-62	60	14	23	45	19½		

Paddy and rice, it will be observed, are selling at cheaper rates this than last season, which is owing to the greater yield, and to more land having been taken up; but more particularly to there having been a less heavy demand for rice on the Malabar coast, where also there was a plentiful harvest. Still, however, looking at the full crop, prices (which have risen most considerably, looking back only for a period of five years) have been most remunerative to the grower in this chief product of the country. On the other hand it will be noticed that horse gram, which is mostly imported, has risen very much in value, and this rise in price has happened in almost every article of import for Mysore and neighbouring countries. Oils, ghee, sugar, chillies, betel-leaves, areca-nuts and cocoa-nuts have all risen very considerably in price, and seemingly in accordance with the rise of prices perceptible all over Southern India, which, though it affects fixed incomes, is not felt by the large mass of the population, viz., the labouring and working classes, as the wages of labour have risen more than in proportion to the rise in prices. As a set off also against the above, the price of coffee has risen nearly 25 per cent. in value, and I calculate that the profits to growers in this enhanced price alone amounts to above 3 lacs of rupees.

Coffee.

Cardamoms.

The price realized by cardamoms in the year under report has reached the highest figure yet known, viz., from 900 rupees to 1,000 rupees per candy, being an increase in price of about 12½ per cent., and thus fully, if not more, than compensating the growers for the decrease in quantity of this season's crop. It has been well remarked by a known English writer on Coorg, that a good cardamom ground or garden is a mine of wealth to its possessor, and this saying is being in a measure verified, cardamoms are getting scarcer, and consequently dearer, as coffee cultivation extends into its limits, and as the Coorg cardamom is very much esteemed on account of its superior colour and aroma, the fortunate holders of unexpired portions of cardamom leases, who have not been induced to sell or otherwise part with them, will realize still larger profits next and succeeding years.

Remission.

93. The following Table shows the amount and particulars of remissions made at the last jummahbundee:—

TALOOKS.	For Losses incurred by Fire.	For failure of Crops from want of Water.	For Loss of Crops by Floods.	Total Remissions.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Nunjarajputten	6 7 –	27 7 –	– –	33 14 –
Yelloosaweraseemay	– –	2 10 5	– –	2 10 5
Paddynacknaad	45 6 –	– –	19 14 –	65 4 –
Yeddavanaad	12 – –	– –	– –	12 – –
TOTAL	63 13 –	30 1 5	19 14 –	113 12 5

The total amount of remissions granted the year previous was *Rs.* 181. 8. 3. The decrease being *Rs.* 67. 11. 10. The principle of remissions is liable to abuse, and sometimes countenances carelessness, and here where the soil is so fertile and assessment light, remissions

remissions do not seem necessary as a general rule. The amount of remissions is gradually decreasing, and doubtless the ryots will become more provident. Yet, perhaps, it is still too early to discountenance remissions when judiciously granted, as in the case of floods and fire, &c.

94. The following table exhibits the gross and net land revenue with particulars, and a comparison of the same with the previous year:— Gross and net land revenue.

Particulars of Land Assessment.	1860-61.	1861-62.	Increase.	Decrease.

95. Of the *Rs.* 6,814. 13. 4. net increase in wet cultivation, but *Rs.* 57. 1. 6. is an actual increase, the remaining *Rs.* 6,757. 11. 10. being amount of house-tax collected from cultivators and included in the land revenue, whilst formerly it was placed under the head of moturpha. The *Rs.* 57. 1. 6. real increase represents the higher rate of assessment now chargeable on wet land, which was given out on easy terms (or on cowl) when first taken up as waste for cultivation. Particulars of increase and decrease in wet cultivation.

The increase of *Rs.* 1,267. 3. in dry cultivation has been realised as follows:— In dry cultivation.

Rs. a. p.	
967 15 1	owing to increased cultivation.
299 3 11	from higher rate of cowl.
Total — — — 1,267 3 —	assessment as mentioned above.

The

* So in original.

In collections in kind.

The increase of *Rs.* 38. 11. 7. in dhooly batta is owing to increased cultivation. The decrease of *Rs.* 279. 1. 1. in koomary is owing to the cultivation having been prohibited. The decrease of *Rs.* 130. 14. 8. in value of other grain collections in kind arises from a decrease of warum cultivation, or bhuttaye, in Yelloosaweraseemay talook.

In deductions.

The decrease of *Rs.* 532. 3. 11. in reductions is on waste or cowl land brought under cultivation, and now falling into full assessment, as explained already; but it appears incorrect charging on land revenue the full amount of assessment of lands not at present due, and then deducting the same again, minus that portion of the cowl assessment actually collected; and that the more correct way would be only to charge the amount which falls in every succeeding year, and omit altogether the lump sum which is only due hereafter.

The decrease of *Rs.* 67. 11. 10. in remissions explains itself, and the increase of *Rs.* 24. 2. 5. in the remuneration paid to potails is accounted for in the increased collections, out of which they are paid their per-centage; though the debiting the land revenue for this item in the manner shown in the form appears hardly necessary.

Net increase in land revenue.

96. Deducting from the net increase of *Rs.* 8,345. 14. 7., as shown in paragraph 94, the sum of *Rs.* 6,757. 11. 10., apparent increase, by the bringing in of house-tax collected from cultivating ryots under the head of land revenue, there is left but the sum of *Rs.* 1,588. 2. 9., as representing the actual increase of land revenue last year as compared with the year previous. And apart from the consideration of jungle and forest land cultivation, the land revenue of Coorg appears to have almost reached its limit, and to be not susceptible of much further extension.

What the falling in of cowl lands will give in succeeding years is shown in the following table. This, and perhaps some 10,000 rupees more for extended wet, and two or 3,000 rupees more for increased dry cultivation, is apparently the greatest limit the land revenue of Coorg, as at present constituted, can reach; though irrigation works, &c., will necessarily bring a further increase.

Full Assessment of the Waste Land at present given out on easy Terms of Cowl.	Particulars showing in what Yearly Proportions the Cowl Assessment falls in as it becomes due.											
	1861-62.	1862-63.	1863-64.	1864-65.	1865-66.	1866-67.	1867-68.	1868-69.	1869-70.	1870-71.	1871-72.	1872-73.
Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
9,822 7 -	522 3 11	1,752 13 5	3,461 15 2	4,881 7 1	6,797 1 4	8,133 14 3	9,610 14 11	9,229 - 4	9,250 7 10	9,269 6 8	9,282 5 8	9,290 3 1

97. The progressive yearly increase in the land revenue derivable from new waste lands brought under cultivation on cowl assessment, is shown in the above table; and upon which full assessment is now charged in the accounts, with subsequent corresponding deductions, as alluded to in paragraph 95. This cowl revenue may not keep pace with the figures shown in the statement from subsequent relinquishing of the lands, and such like causes, or other land now under cultivation may be abandoned for it, but yet the table on the whole will not be far from the actual increase.

Miscellaneous or extra sources of revenue.

98. Subjoined is a comparative statement of the total of extra sources of revenue for this and the previous year, showing net increase of *Rs.* 60,224. 15. 7.

	1860-61.	1861-62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Miscellaneous, or extra revenue.	1,32,426 1 3	1,92,651 - 10	60,224 15 7	—

The net increase would be more by *Rs.* 6,757. 11. 10., if we consider that amount in house-tax collected from cultivators, transferred from this head to land revenue. Particulars of this increase will be given hereafter in a separate statement of the extra sources of revenue.

General revenue result under all heads.

99. Below is given a statement of the revenue under all heads, which shows a net increase of *Rs.* 68,570. 14. 2. in favour of the year under report:—

	1860-61.	1861-62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*
Land revenue - - -	1,51,231 10 5	1,59,577 9 -	8,345 14 7	—
Extra sources of revenue -	1,32,426 1 3	1,92,651 - 10	60,224 15 7	—
Total - - - *Rs.*	2,83,657 11 8	3,52,228 9 10	68,570 14 2	—

The

The inelasticity of the land revenue has been explained before; but nearly one-third of the above extra revenue is realised from cardamoms and coffee. The nature of cardamom cultivation obliges the present system in lieu of a land tax, so that in a measure the revenue realised from cardamom grounds may be considered as land revenue; as also a certain proportion of the coffee haulut, as being raised from untaxed land.

Total demand, collection, and balance for the year under report.

100. The amount of demand of all sources of revenue for the year under report is *Rs.* 3,52,228. 9. 10., of which the sum of *Rs.* 2,72,208. 10. 7. was collected within the year, leaving a balance of *Rs.* 80,019. 15. 3. (against *Rs.* 75,101. 8. 5. similarly uncollected in 1860-61) remaining uncollected at the end of the official year. The greater part of this sum has since been collected.

Collection and balance of the previous year.

101. A sum of *Rs.* 75,101. 8. 5. being the amount of revenue remaining uncollected at the end of the year previous, was also collected within the year under report, leaving a balance of *Rs.* 1,367. 14. 1. still uncollected, chiefly on account of cardamom tax. Measures will be taken to prevent an occurrence of similar delay in future.

Irrecoverable balances.

102. There will be no irrecoverable balance for the year under report, or for the year previous; but a sum of *Rs.* 122. 4. 1., an uncollected and irrecoverable balance on account of cardamom tax for the year 1856-57 still appears in the accounts, and for the striking off of which permission from the Government of India will shortly be solicited.

Uncollected balances accounted for.

103. To account for the seemingly heavy balance remaining uncollected at end of the year, it is necessary to state that, with the exception of the Nunjarajputten and Yellooseweraseemay talooks, in all other parts of Coorg, two out of three total kists, or instalments by which the land revenue is payable, do not fall due until after the expiration of the year. And two cardamom kists, and a proportion of coffee haulut, and abkarry also, is not paid within the year. It is calculated that about 70,000 rupees and odd, out of the *Rs.* 3,52,228. 9. 10. total revenue of the past year, was not due till after the expiration of the year. Though on a judicious apportioning of the time for the ryot paying his kist rests in a great measure his prosperity, and I am aware that a former Superintendent advocated the present period of payment of kists, yet it would simplify the accounts if measures could be devised for collecting the bulk of revenue, if not all of it, within the year itself.

Coercive process.

104. No coercive measures, either of distraint or sale, were resorted to in the collection of the revenue.

Tuccavee.

105. No tuccavee, or advance to cultivators, was made during the year.

PART II.—MISCELLANEOUS OR EXTRA SOURCES OF REVENUE.

Statement of extra sources of revenue.

106. The following Table gives particulars of the extra revenue under all heads for the year under report, and a comparison of the same with the previous year:—

ITEMS.	1860-61.	1861-62.	Increase.	Decrease.
	Rs. a. p.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

		Deduct decrease	9,737 2 —	
		Net increase - - *Rs.*	60,224 15 7	

CHAP. XVIII. Coorg Districts.

Reports on the above abkarry.

107. With the exception of a sum under 1,000 rupees, the remaining abkarry revenue is derived solely from the sale of spirituous liquor. The climate and country favour the consumption of strong drink, and it is feared that drunkenness is on the increase, which will require every precaution, and a strong hand to keep down. The manufacture and wholesale sale of the liquor is a Government monopoly, or under amanie management, which is better perhaps than farming the revenue, and thus making the contractors directly and pecuniarily interested in increased consumption, and sometimes in encouraging other vices and crimes growing out of drink. This amanie management doubtless causes some part of the present increase in the profits, which would otherwise go to the farmer, and further by the check to the practice of interdicted private distilleries. The illicit manufacture of rice-arrack being prevalent at one time, and still I believe occasionally resorted to, and the increase will be further accounted for in the growing prosperity of the country and inhabitants, and the additional number of emigrants and liquor-consuming coolies attracted to the country owing to increased coffee cultivation.

Opium. The same remarks apply generally to the increase in opium and other drugs.

Coffee. The increase in coffee indicates an extended cultivation and export of this important article of commerce.

Cardamoms. As the cardamom forests are leased out for a period of years on the same yearly rent, the revenue will remain much the same till the expiry of the present leases, viz. in 1865–66. The present decrease is partly owing to coffee haulut having been substituted for cardamom rent; in one or two instances where exported coffee grown on cardamom jungle has been charged, an amount in haulut equal to or exceeding the cardamom rent whereby the latter rent ceased on the imposition of the former. The decrease from this cause is 266 rupees, and the remaining decrease of *Rs.* 1,105. 0. 3. is in the amount realised by the sale of Government cardamoms, viz., such as are picked in isolated unleased localties, or have been zufted as encroachments upon Circar land, or such like causes; but *Rs.* 1,279. 6. 7. has been realised from these sources, the remaining revenue arising from cardamom rent.

Sandalwood. The increase under the head sandalwood is more apparent than otherwise, there having been no sales the previous year.

Jungle produce. This head comprises resin, areca-nuts, pepper, tamarinds and sandal chips; and the increase is owing to a better season for this description (excepting sandalwood chips) of produce.

Nuzzer kanikay and guttee jummah fees. The decrease here is owing to less land having been taken up on jummah tenure; this decrease, however, is a gain rather than loss, as on jummah tenure 5 rupees per 100 butties only would be realised, whilst on sagoo tenure it is double that amount.

Moturpha. As shown in paragraph 95, *Rs.* 6,757. 11. 10. of the decrease in moturpha is owing to this amount having been transferred to the head of land revenue. The remaining decrease has been caused by remissions in moturpha to persons paying income tax.

Shop tax on market days. The increase in tax on market stalls indicates the thriving state of the seven large weekly bazars held in various parts of Coorg.

Income tax. The working of the income tax has become better understood; this and payments in 1861–62 of the tax due in 1860–61, as well as increased profits, will account for the increase under this head.

Sale of judicial stamps. This was the first year of the Act coming into operation, or rather stamps were not supplied with the commencement of the operation of the Act, so that these sales do not represent those of a whole year, but only nine months. As the Stamp Act Rules become more widely known and enforced, this will become a very fertile, unobjectionable, and increasing source of revenue.

Judicial funds. The increase here requires no comment.

Petty contracts. Comprise bees' wax, honey, turmerick, resin, yellow and red bark dyes; and the increase is ascribable to the same causes as given for the increase in jungle produce.

Fee on stamping cloth. The remaining heads do not appear to call for particular remark, excepting that the fee on stamping cloth made by weavers of the Nunjarajputten and Yelloosaweraseemay Talooks appears to be an objectionable and worrying tax; and for these reasons, as well as owing to the small amount realised, and to the poverty of the weavers from whom the tax is collected, I would respectfully advocate its abolition.

Review of the above. 108. Deducting *Rs.* 26,942. 11. 3., sale of sandalwood, and *Rs.* 3,711. 7. 6., sale of judicial stamps, total *Rs.* 30,654. 2. 9. (as not admitting of a fair comparison with the year previous) from the net increase in extra revenue of *Rs.* 60,224. 15. 7., as above shown, it leaves a balance of *Rs.* 29,570. 12. 10., to which if be added the house tax transferred to land revenue, viz. *Rs.* 6,757. 11. 10., the total and *bonâ fide* increase of extra revenue this year compared with last is *Rs.* 36,328. 8. 8. I submit this as a most hopeful and encouraging sign. The extra revenue this past year has overtopped the land revenue; and with the present equitable and popular system of administration, the check to crime, and the growing prosperity of the country, it is expected that the elasticity of the extra revenue will become year by year yet more apparent, and settle the question (seeing how the present

present light assessment of Coorg has acted beneficially on the extra revenue) so far as Coorg is concerned, that the resolution of the Government of India concerning the sale of "Waste Lands" in "perpetuity discharged from all prospective demand on account of land revenue. And the permission to redeem the existing land revenue by the immediate payment of one sum equal in value to the revenue redeemed" will not only immensely add to the resources, productions and prosperity of the country, by attracting capitalists to the soil, and encouraging present proprietors to work and expend on their own, but as a natural sequence will also still further increase the extra sources of revenue.

Salt.

109. The increased and increasing consumption of sea salt, in the profits it gives to the Madras Government as a monopoly, ought not to be lost sight of in treating of extra revenue. Comparatively little, if any, earth salt is consumed in the district, so that the consumption of sea salt here, where the labouring classes are well paid, and can afford to consume as much as they like, is very considerable, and would add largely and increasingly to the extra revenue of the district, if the profits arose here; and the large exports of coffee from Coorg help indirectly to cheapen the cost of transit of sea salt into the Mysore country and interior, as the bandies that carry coffee to Cannanore and Mangalore mostly bring back a return load of salt.

PART III.—LOCAL FUNDS.

Local funds.

110. There appear hitherto to have been no funds set apart in the district for municipal purposes and local requirements. Under paragraph 4 of the Commissioner's Circular, No. 174, dated 12th May 1862, on the subject now treated of, it may be possible to create a small municipal fund for sanitary and other requirements of the town which contributes the funds. The creation of a municipal element of this sort will be very advisable.

For municipal purposes.

For general district requirements.

111. Regarding the second description of local funds alluded to in the above paragraph of the Commissioner's Circular, viz., for general district requirements, as no income is derivable here from plough tax or ferry funds, the sole source to look to for the creation of this fund will be "sale of stray cattle."

Sale of stray cattle, and fines on cattle trespassing, amounted for the past year to *Rs.* 1,168. 11. 6. If sanction is accorded, this sum will be appropriated for the purposes contemplated, and this amount, with the 950 rupees expected revenue from the same source for 1862-63, will enable a fair start to be made. A fund of this sort has been much wanted in Coorg. Coffee planters, sometimes at their own expense, make good roads leading up to their various estates, which, with their assistance and these funds, might be very advantageously extended to the next village, or to meet a neighbouring road; and though the fund is small, and much could not be done in each year, yet if yearly a few miles of bandy road, or even bullock track, were made, a jungle stream bridged, or a well dug, or travellers' chuttrum erected, the aggregate of benefit in a few years would be great.

PART IV.—MISCELLANEOUS.

Enams and cash payments.

112. The Statement below will serve to give an approximate idea of the nature and extent of land alienations, or enams, as also cash payments, with particulars under each head:

PARTICULARS.	Religious. Estimated Amount in Rupees.	Charitable. Estimated Amount in Rupees.	Service. Estimated Amount in Rupees.	TOTAL. Estimated Amount in Rupees.
	Rs. *a.* *p.*	*Rs.* *a.* *p.*	*Rs.* *a.* *p.*	*Rs.* *a.* *p.*
Kham - - - - -	1,006 5 -	- -	- -	1,006 5 -
Rooson jagheer or joree -	3,949 7 2	13 4 -	2,172 12 11	6,135 8 1
Free jagheer - - -	1,023 6 5	4,244 - 5	5,983 4 -	11,250 10 10
TOTAL - - -	5,979 2 7	4,257 4 5	8,156 - 11	18,392 7 11
In Cash - - -	13,890 3 10	- -	1,334 1 7	15,224 5 5
GRAND TOTAL - -	19,869 6 5	4,257 4 5	9,490 2 6	33,616 13 4

Centage of same on gross land revenue.

The per-centage of the above to the gross land revenue, under the head Service, is not heavy, neither does it appear so under the head Charitable; but religious endowments show a heavy centage on the gross land revenue. Of the *Rs.* 9,490. 2. 6. service grants, para. 35 shows what amount goes to village potails and coolwaddies, viz., *Rs.* 3,998. 12. 6.

CHAP. XVIII. Coorg Districts.

Approximate statement of gross income to all landlords.

113. The statement below shows approximately the gross income on land from all sources, with detail of village expenditure of every landlord in the district. And this may be taken as a rough statement of the total land resources of Coorg.

APPROXIMATE STATEMENT of GROSS INCOME to all Landlords of COORG, for 1861-62.

Distribution of Revenue.		Amount of different Details.	Total of Items.
		Rs. a. p.	*Rs. a. p.*

Works of public utility executed by private individuals.

114. I am unable to get prepared in time a return of works of public utility executed by private individuals at their own expense, but the expenditure under this head for the year under report is, I am told, almost nothing. A small well or two dug, or a hut for the accommodation of native travellers, is the most, I believe, that has been done in this way by private individuals.

Slavery.

115. The question of slavery in Coorg attracted the attention of the authorities very shortly after the assumption of British rule. The first attempt at emancipation was made with the predial and disposable slaves attached to the former rajah's punnays or estates. Some of these slaves, after emancipation, took up lands on their own account, and one or two are now well-to-do cultivators; others accepted work as free labourers; whilst others, it is believed, through the agency of a converted Coorg and Dr. Moegling, became Christians, and settled down at Almanda, in Coorg, where they form the nucleus of an interesting rising Christian village. Some of these Christians were subsequently induced to leave the settlement and work elsewhere. Laziness was the motive, as they thought by becoming Christians they would be relieved from work. Thus the good-for-nothing ones have been weeded out, and the working men left. The emancipation of these punnay slaves doubtless bettered the condition of the remaining slaves, numbering some 4,000 at present, attached to private vurgas or farms. They are not termed slaves, but "jummah aloo," jummah servants. The more sensible of the Coorgs understand their uncertain position as regards claiming ownership over these men. Their labour is precious; coffee planters are ready to hire or succour them, and other Coorgs are not unwilling to inveigle them away from their masters. The result is an increasing disposition and necessity to care for, if not actually to be kind to them. Some masters may be harsh, and ill treat their slaves, and the Coorg talook authorities may sometimes connive at bringing back runaways; but slowly and surely is their condition bettering, and it may perhaps be safely left to time, to increased intercourse with independent Europeans, and the timely interference of the Superintendent, whenever requisite, and, more than all, to the master's self-interest, gradually but effectively to eradicate the evils of slavery. Slave, in the hereditary character implied in the offensive word slave, the "aloo mugga," servant's son, of the Mysore country, is not very different from the "jummah aloo" of Coorg, save the bondage in the former case is concealed under the form of bonded debt. Here it is open, and value

of

of labour and growing public opinion will as effectually make free the one as the other. There is no immorality connected with the present relation of master and jummah servant, and many slaves have their patches of coffee cultivation, and realize the profits for themselves, their masters doing all they can to attach them to the soil.

Miscellaneous revenue business.

116. A considerable amount of miscellaneous revenue business was transacted during the year. Indeed questions concerning breach of contracts, coffee lands, and coffee cultivation, become every day more frequent and troublesome, involving conflicting claims and rights, in proportion as the limits of available cultivable coffee land diminish and applicants increase.

SECTION IV.—EDUCATION.

State of education.

117. Education seems but little to have been attended to in Coorg till up to a very recent period, viz., in 1857, when the Anglo-vernacular school, established at Mercara in 1856, by Dr. Moegling, received, on the late Commissioner, Sir Mark Cubbon's recommendation to the Supreme Government, a liberal grant in aid. This grant is still continued to school, which, besides being the only educational establishment of its kind, enjoys, under the management of the present head master, Mr. Richter, the confidence of the Coorgs and Government officials, and is in a flourishing condition, which augurs well for its future working, when through more extended Government support and greater interest evinced in education by the inhabitants themselves, it will be able to enlarge its sphere of action.

Education in the Anglo-vernacular school.

118. The education afforded in the Anglo-vernacular school is sound and practical, and a plan has been lately submitted for not only affiliating the vernacular school to it, but making it, in a measure, supply the place of a normal school, to train up and send out qualified teachers, as also to properly instruct the 20 vernacular schoolmasters, who at present receive a small monthly pittance from Government. If the project is sanctioned, education, under Mr. Richter's able supervision, promises to make its first stride in Coorg.

Depôt for school books.

In connexion with the Anglo-vernacular school is a depôt for school-books and stationery, and which is the circulating medium for two Canarese publications, 13 copies of which are subscribed for by the scholars alone.

Attendance at Anglo-vernacular school.

119. There are two drawbacks at present to a better attendance of scholars at this school. The first being, that the Coorgs do not, as yet appreciate education so far as not to grudge the payment of a small school fee. The second is the detached nature of the villages and the few families that live in Mercara. Time, self-interest, and insisting upon candidates for Government employ, possessing a fair amount of elementary education, will doubtless soon tend to remove the first difficulty; whilst for the second a good remedy, and which is already being taken up in some parts of India, has been proposed by Mr. Richter, viz., the establishment of a boarding-house in the vicinity of the school. It will be left to the Superintendent to impress upon the Coorgs the necessity of educating their children, and to expose the absurdity and ignorance of some of their ideas, viz., that they have got on very well without education, and so will their children, who will get "spoilt" by learning English; and, further, to point out that they cannot hope to be so generally employed in Government service if they do not keep up in some measure with the times; and it is expected that the more sensible and enlightened Coorgs will subscribe to the erection of a boarding-house under their own control, to which, with scarcely any extra expense to themselves, they may send their children from distant villages (now debarred from any education) to be boarded and educated at the school. At present it may be said that those Coorgs only receive education in the Anglo-vernacular school whose parents or friends reside at Mercara. Eventually, with a small endowment, indigent children might also be clothed and boarded here, and educated at the school gratuitously: and I do not think it chimerical to state that a properly supervised boarding school of this sort, with healthy recreation, sound teaching, and separated awhile from the baneful influences of their own homes, will give the scholars a healthy rivalry and tone which must lead to good results.

Proposed boarding house.

No female scholars.

120. The usual prejudice and indifference to the education of girls seems also to exist here. The wife of the head master is very anxious to secure some scholars, and would give them her best attention. It is trusted that something may be devised to get together some girl scholars, whose education is as important as that of their brothers. I am told, however, that there are some Coorg and other girls under instruction in private vernacular schools.

Attendance at Anglo-vernacular school.

The average daily attendance in the Anglo-vernacular school has been 79 scholars last year, against 85 for the year previous.

Vernacular or indigenous schools.

121. The state of indigenous education will be shown by the table below, which shows a decrease of scholars; but as hitherto little or no control has been exercised over these schools, the above figures may be taken as only giving approximately the numbers; the attendance being most irregular and fluctuating throughout the year, not only from the usual agricultural and feast-day interruptions, but also from the indifference alike of parents,

parents, pupils and teachers; and thus education languishes for want of that first fair start, which, in a country like this, can only be effected by Government encouragement, sympathy, and support:

YEAR.	SCHOOLS.			SCHOLARS.		
	Canarese.	Persian School at Mercara.	Total.	Male.	Female.	Total.
1861 - - -	24	1	25	595	- -	595
1862 - - -	24	1	25	589	- -	589

Primitive system of education.

122. The education afforded in these schools is of the usual primitive and unsatisfactory kind; no books are used; caligraphy and spelling varies with each schoolmaster, a tedious burdening of the memory with tables and sentences, winding up with the reading and writing of urzees of the description used generally in the Talook and Sudder Cutcherries. Nothing is made attractive in the whole course of study; no other nor higher object inculcated or thought of than the increased chances of pecuniary gain to the possessor of a small smattering in reading, writing, and accounts.

Status of village schoolmasters.

123. And the status of the village schoolmaster is at present very low, and when it is known that 20 out of the 24 schoolmasters attached to the vernacular schools receive only a monthly pittance from Government of 2½ rupees, less by about half than what the commonest cooly receives as wages for his labour, no wonder will arise at vernacular education being what it is.

Four now in training.

124. But four out of the above 20 schoolmasters are now in training under Mr. Richter, at the Anglo-vernacular school, who, when they have passed a satisfactory examination, will resume their village duties on a proposed increased salary of seven rupees per month; four other schoolmasters will then be taken in hand, and similarly rewarded, provided they pass the prescribed examination, and the same course followed with the others. Such is what has been recommended, and what it is trusted will be sanctioned. A satisfactory beginning will then be made, the schools and masters will be brought under proper supervision, and the character of both will be raised in the eyes of the people (a subject of much importance as regards the master, who will be much more looked up to and respected as being a fairly paid and recognized Government official), and the system of teaching will become more systematic and rational.

Private vernacular schools.

125. In addition to the before-mentioned 24 Canarese vernacular schools, there are also about 21 private schools located in the principal towns and naads of the district, supported by the inhabitants, and the average attendance in these schools may be reckoned at from between 357 to 400 scholars daily. The course of instruction here is much the same as that noticed above in the case of the other vernacular schools.

Endowed school at Fraserpett.

126. A vernacular school exists in Fraserpett, established and endowed by General Fraser with the sum of 250 rupees, for which a soucar at Mercara allows interest of 3 rupees, which goes for the master's salary. The attendance in this school has been from 15 to 20 scholars daily.

Evening lectures.

127. A small but encouraging sign to those interested in education is the fact that some of the older pupils of Mr. Richter, who have left school, attend the evening lectures kindly and gratuitously given by that gentleman, which serves to keep up the remembrance of studies, too apt to be forgotten in their uneducated homes.

General remarks.

128. The concern which all seem to partake in these interesting and frank people, the Coorgs, has perhaps led me to leave other castes in the background; but of course the schools will be open to and are meant for all, and the Coorg will not be always the most forward to take advantage of them. Drunkenness, is, I fear, a prevailing and increasing vice among the Coorg population; and such is their present increasing material prosperity, ushered in since British rule, that it would appear to be a duty owing to them, to give them that education without which their increased comforts and comparative wealth promise to debase and prove a snare rather than an advantage to them.

Again, education is advancing with such rapid strides elsewhere that some corresponding efforts ought to be made here; and the codification of civil and criminal laws and procedures, stamp and income acts, and the like, all point out that if the people are to know the laws they live under, and what are their rights, if Government wish to have a better description of public servant, taken from the people themselves, and if the inhabitants are to make a better use of their increasing prosperity, and bear better the contact with Europeans, now fast gaining in numbers, then must the cause of education be taken up in Coorg, and its progress watched as carefully as its revenue or any other department of the State.

SECTION V.—PUBLIC WORKS.

PART I.—ROADS AND BRIDGES.

Project for new roads.

129. A comprehensive project for further opening up the interior of Coorg, and making additional roads to the coast and Mysore country has lately been submitted to the Commissioner in letter No. 628, dated 31st May 1862, to the Secretary's address. The road at present under construction from Coodlypett to Mercara will be a great boon. All the existing main lines of road are bandy roads; but it is sometimes made a matter of complaint that the Great Ghaut trunk roads to Mangalore and Cannanore are not always in good repair, particularly in the rainy weather. It is a novel, as well as encouraging feature, the ready manner in which both Native and European planters have lately come forward to contract for keeping portions of the Great Ghaut roads in repair, as also to construct parts of the Mercara to Coodlypett road. Here, where labour is generally difficult to be procured in the pouring rains, and but little work, without strict supervision, is done by coolies at that time of the year, a contract system undertaken by persons well supplied with labour, and who are the most interested as having a stake in the province, in keeping the road in thorough repair, will prove very beneficial, and independent of profit by timely attention to repairs, a healthy rivalry will arise between the various contractors, and I may add Government engineers also, as to the state of repair of their respective portions of road.

Existing main lines.

The contract system.

Cross roads.

130. As noticed before, no cross roads have as yet been made from local funds, owing to their hitherto non-existence. Mr. Mann, though, has in one respect, partially supplied the deficiency, for he has made a fair bandy road of about nine miles in length, leading to the Coorg Coffee Company estates, and which the general public already avail themselves of. This road opens out a large tract of country, where hitherto there has been no road whatever, and which, if continued towards Soolea, in the Canara district, as contemplated by Mr. Mann, will be a shorter cut by some 15 or 17 miles to the port of Mangalore. Under certain restrictions and conditions this last road is one where a Government grant-in-aid might be afforded. Other proprietors have also made various smaller roads leading to their estates, more or less helping to open out the country, and deserving, in some cases, of being taken up and extended. In fact, in the matter of communications, the coffee planters of Coorg have evinced both public spirit and forwardness.

PART II.—CANALS AND IRRIGATION.

131. This subject has already been treated of in paragraphs 79 to 82, but there may be some other feasible tank or other anicut projects, which the professional eye of an engineer might notice, and the construction of which, with the consequent clearance of jungle, might tend to make the marshy country more salubrious.

PART III.—CIVIL AND PUBLIC BUILDINGS.

132. A suitable post office would seem to be required at Mercara, instead of the present insignificant rented building. The gaol is inconveniently situated, and the accommodation is not nearly enough.

SECTION VI.—POST OFFICE.

133. The general post lines work well, and so does the anchay; by a new arrangement Mercara is now in direct anchay communication with Hassan, the Munzerabad coffee country, and Nuggur.

SECTION VII.—ELECTRIC TELEGRAPH.

Telegraph communication with Mangalore wanted.

134. The extension of the line from Mercara to Mangalore would be a boon to the trading interest here. All messages from Mangalore have to be despatched by post to Mercara, and thence sent on to their destinations. Independent of the advantages to the Mangalore people by the extension, the European settlers and others here, especially those connected with coffee, rice, and cardamom transactions, would make frequent, and I think a paying use of the line, and *vice versâ*, and without this line the traders and settlers of this province labour under a great disadvantage from want of prior shipping intelligence, and the rise and fall of prices on the coast.

SECTION VIII.—RAILWAY.

135. The extension of the Madras Railway line to Beypoor as a natural consequence benefits Coorg; Mercara being about 168 miles distant from Beypoor, *viâ* Tellicherry and Calicut; and a traveller to Madras might also pick up rail, *viâ* Mysore, Chamrajnuggur, and the Hassanoor Ghaut, at the Avanashe station, in the Coimbatur district, distant about 182 miles from Mercara, and am not certain but that this latter route, if open throughout, would not be the preferable one during the rains.

SECTION IX.—FINANCE.

Total expenditure of district.

136. The following Table particularises the total expenditure, ordinary and extraordinary, for the year under report:—

PARTICULARS.	1860-61.	1861-62.	INCREASE.	DECREASE.
ORDINARY:	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

EXTRAORDINARY;				
Department Public Works	11,536 5 1	14,646 10 –	3,110 4 11	—
GRAND TOTAL	1,13,647 7 –	1,21,098 14 4	7,451 7 4	—

137. The increase shown in judicial contingent charges is owing to the increased cost for dieting, clothing, &c., the gaol prisoners, who averaged 16 more this than the year previous (*see* paragraph 38). The actual increase owing to this cause is nearly double the increase now shown, so that in reality there has been a decrease effected generally in general judicial contingent charges. The main items of increase in revenue charges are superintendent's pay and coffee haulut establishment, owing, as regards the superintendent, to his staff corps salary also being included this year in civil charges. Two extra shroffs were temporarily sanctioned for the coffee haulut establishment, whose salaries amount to 86 rupees; and taking these additional items of expenditure into account, it will be seen that under this head also there has been in reality a slight decrease. The increase in miscellaneous charges can also be satisfactorily accounted for. The expenses on cutting and collecting the sandal-wood sold this year amounted to *Rs.* 663. 6. 10.; and whilst formerly the commissariat department at Hoonsoor furnished carriage for the superintendents cutcherry dufters, office tents, &c., for four months, and charged accordingly, the cattle have now been sent here, and their keep is chargeable the whole year round. The increase from this cause is *Rs.* 818. 13. 2. And whilst formerly the commissariat department paid the Government allowance of 600 rupees a year for the dieting of paupers in civil dispensary, &c., it is now paid by the civil department, and the extra charge under this head this year, and not appearing last year, is 600 rupees; total, *Rs.* 2,082. 4.

Increase in judicial charges accounted for.

Increase in revenue charges.

Increase in miscellaneous charges.

These are extra charges for the year, so that there has been no real increase upon last year's charges, but the reverse. The decrease in pensions to ex-Rajah's family is owing to one of the members having died. The increase of 1,190 rupees in pensions, on account of the Canara insurrection, is owing, that whilst formerly these pensions were payable half-yearly, they are now paid quarterly, and the above 1,190 rupees represents the additional quarterly payment that has come into this year's accounts. The superannuation pension is a fresh charge altogether, viz., pension to the late treasurer. I am unable to give particulars of the increase in the public works expenditure, but it is doubtless owing to the construction of the new line of road from Mercara to Coodlypett.

Increase in pension, and also decrease.

Increase in public works.

138. The Table below gives the same particulars in another form, and although there is an increase of *Rs.* 4,341. 2. 5. in ordinary or controllable expenditure, yet for the reasons shown in the preceding paragraph, and, independent of those reasons, looking at the net increase in the revenue of the district, the increase in ordinary charges does not appear disproportionate. The increased expenditure in the Public Works Department is perhaps a matter of congratulation:—

Abstract statement of expenditure.

General results.

Particulars.	1860-61.	1861-62.	Increase.	Decrease.
ORDINARY.	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*	*Rs. a. p.*

TOTAL ORDINARY and EXTRAORDINARY	1,13,647 7 –	1,21,098 14 4	7,451 7 4	—

139. The financial results, therefore, leave a sum of *Rs.* 2,31,129. 11. 6. in favour of receipts or actual surplus for the year under report, whilst the surplus for the year previous was but *Rs.* 1,70,010. 4. 8.

Financial result.

Actual surplus.

140. Next year there is every probability of a similar, most likely greater, surplus, whilst the exceptional causes increasing ordinary charges will not operate, and which it is trusted will admit of some small increased expenditure in additional establishment, and increased pay to a portion of the present English department, which is short-handed and over-worked.

Expected surplus next year.

English department wants an increase.

SECTION X.—POLITICAL.

141. The following, though scarcely having any political significance, may appropriately come in under the above head. At the former rajah's palace in Nacknaad, the scene of barbarous atrocities shortly before the last rajah's deposition, situated about 20 miles from Mercara, resides Neelamajee, daughter of Mullay Ursur, of Hormulnaad, a distant relative of Dodda Veerajender, but whose family is now altogether extinct; and an illegitimate granddaughter of Dodda Veerajender, named Neelamma Neelamajee, after her conversion to Mahomedanism, became one of Tippoo Sultan's wives, and after the taking of Seringapatam by the British she came to reside at Nacknaad, and was supported

Neelamajee, Tippoo Sultan's wife.

ported by her relatives the then rajahs. Since the deposition of Veerajainder she has been maintained by a monthly pension from the British. Neelamajee must now be upwards of 90 years of age.

Devamajee and Chennabassapah.

In addition to Neelamajee, at Appagolla, in Koinherry Naad, reside Davamajee and her husband, Chennabassapah. Devamajee is the sister of the late deposed rajah, and her husband, though a lingayat, was formerly a Coorg, though of no particular family, and poor. He was made a lingayat by Lingarajender, who married him first to one daughter, and after her demise married him again to another daughter of his, viz., the present Devamajee. These are the Devamajee and Chennabassapah, who in 1832 fled the Coorg country to save their honour and lives, and sought the protection of Mr. Casamajor, Resident of Mysore. The rajah demanded the restoration of the fugitives; the request was not complied with; they had revolting tales to tell, which led to inquiries, and a visit from the Resident to Coorg, ending in open rebellion on the part of the rajah, and the taking possession of his country in 1834. Devamajee and Chennabassapah enjoy a jagheer, and are also in receipt of a pension from the British. They have one son, about 11 years of age, and three daughters; one of them, widow of a Canara poligar, now resides with her parent, and the other two daughters are married to a pensioned poligar residing in Bangalore. One only, I believe, has a daughter, aged but a few months. Chennabassapah possesses no influence among the Coorgs.

SECTION XI.—MISCELLANEOUS.

POPULATION.

Population statistics.

142. The population returns give a grand total of 118,352 souls, being less by 328 persons than the year previous. The decrease is thus accounted for:—

			Souls.
Persons leaving Coorg numbered			8,184
Persons emigrating into Coorg			6,843
		Decrease being	1,341
Births for 1861-62	4,593		
Deaths for 1861-62	3,580		
Increase of births over deaths	1,013	Deduct	1,013
		Net decrease	328

The deaths give a per-centage of 3 to the population. The per-centage of births is about 3¾ to the population.

But from 130,000 to 140,000 souls is supposed to be the more correct census for Coorg, and this will slightly, and perhaps more correctly, modify the averages regarding litigation and crime to population, given in paragraphs 10, 11, and 23. The Table below may not prove uninteresting:—

PARTICULARS.	CENSUS.			Per-centage of Increase from 1839 to 1861-62.
	1839.	1856.	1861-62.	
Coorgs	17,096	-	23,341	37
Other castes	64,341	-	95,011	49
TOTAL	81,437	111,890	118,352	43

Which shows that in 22 years the Coorgs have increased by 37 per cent., and other castes in about the same proportion, the remaining increase of 12 per cent. being perhaps safely ascribable to emigration.

EMIGRATION.

143. Numbers of Mysore and Wynaad people, chiefly of the jungle tribe, yearly migrate to Coorg, and chiefly into the Kiggutnaad talook, for the purpose of assisting in harvesting the extensive rice crops, after which they return to their own homes. A constant stream of coolies and labourers may be said to be entering and leaving Coorg at all times of the year, connected with the numerous coffee estates scattered over the country. But few of these coolies remain for good in the district, or beyond the working seasons; but, altogether, though paragraph 142 shows an actual emigration from the district, I think this either to be incorrect or exceptional, and that Coorg, from coffee cultivation and other causes, annually receives a slight addition to its population from emigrants settling in the country.

AGRICULTURE.

Rice culture.

144. The usual primitive but generally successful system of agriculture obtains here as in other parts of India. The only plough cultivation worthy of notice is that of rice, and though the bullocks are wretched, and the implements used very simple, yet rice lands are generally manured and carefully prepared for the seed. This, and a naturally fertile soil, and

and exemption from drought (which places the agricultural community here in a far better and safer footing than their brethren on the plains) generally results in a very good rice crop, which, after deducting for home consumption, leaves a large margin for export. The value of the rice crop last year may be estimated at not less than 15 lakhs of rupees. Plantains and oranges are considerably exported from Coorg. The cardamom of Coorg is much esteemed "on account of its aroma, which is much superior to those raised in gardens in Mysore and elsewhere. An account of this singular branch of jungle horticulture is given in the Coorg memoirs. In the forests leased out for cardamom cultivation the steepest declivity of the hills are chosen for cardamom grounds. The steep must face west, or, still better, north, for the east wind and the sun are noxious. On the higher edge of the chosen ground, one of the largest trees is selected for the operation of shaking the ground. The slope below to a length of 250 or 350 feet, according to the height of the tree, is cleared of brushwood, thorns and weeds. This done, a platform is erected between the mountain side behind the tree and its stem, at a height of about 12 feet. The tree is cut, which falls from the height of its trunk down the mountain slope, top foremost, carrying with it in the great crash a number of smaller trees, and rushing on a long way towards the valley below. The sound of the tree striking the earth resembles the discharge of cannon, or a peal of thunder. The ground trembles, and the work is now done for the present. Within three months, cardamom plants show their heads, as fern do on newly cut ground, all over the space shaken by the fall of the great tree. They rise during the first showers of the monsoon, and grow to a height of two or three feet in the first rainy season. The ground is then once more carefully cleared of weeds, thorns and small bushes, which may have sprung up during the monsoon. The cardamoms must not be disturbed. The garden is left alone again for a year. In the month of October of the second year after the felling of the tree, and in the 20th month of the plantation, the stocks have reached man's height. A party sets out to clear the whole ground thoroughly the third time. After six months' more, in April, the fruit-bearing small branches shoot forth from the bulk, they are covered with clusters of beautiful lion-mouthed blossoms, and afterwards with oval triangular capsules. Other five months pass, when, in October, the first crop is gathered. The first full harvest, however, is collected only a year afterwards. The harvest continues good for six or seven years. When the crops begin to decline, another large tree must be cut down on the plantation. The whole business from, as it appears to the Coorg, the seedless springing up of the plants to the gathering of the crop is strangely mixed up with superstitions. Thus are spicy cardamoms grown in Coorg glens never penetrated by the sun's rays during the cloudless winter, or the gloomy monsoon."

Plantains, oranges, and cardamoms.

145. The revenue derived from cardamom plantations, according to the memoirs, is stated in the rajah's time to have been 80,000 rupees annually. At the onset of British rule the revenue at one time was but 4,000 rupees; in 1855-56 it was *Rs.* 7,781. 7.; from 1856-57 up to the present time, with slight variations, the revenue averages nearly the same (the forests having been leased out for a term of 10 years, which expires in 1865-66, viz., from 27,000 to 29,000 rupees and upwards yearly. It is hazardous to state how or for what term of years these forests* will again be leased out, seeing radical changes may be effected before then; but if again leased out similarly as now, a sum of *Rs.* 7,846. 7. 11. will have to be deducted from the present cardamom revenue, as being the rent of forest, where permission has been accorded to plant coffee. This, however, will only be changing the head of revenue, and the amount, under coffee cultivation, will most likely increase. If cardamom forests are again similarly leased out, it is estimated, from the growing value of cardamoms and competition for coffee lands and other causes, that the rise in the leases will be about 70 per cent. Already several leaseholders of cardamom forests have realized considerable sums in transferring their leases to others for coffee cultivation purposes. A rough guess gives the value of last year's cardamom crop at about two lakhs of rupees. The cardamom leases are all held by natives, with the exception of a few lately made over, for a consideration, to Europeans for coffee cultivation.

Cardamoms continued.

* Cardamom forest leases.

146. The following Table will serve to illustrate how, from small beginnings, coffee cultivation has grown to dimensions which, with the present rise in prices, promise in a few years to eclipse every other description of revenue in Coorg, save abkarry, which grows and increases with the cultivation of coffee:—

Coffee cultivation.

YEAR.	REALIZATIONS FROM COFFEE HAULUT.								
	From Europeans.			From Natives.			TOTAL.			Yearly Increase.		
	Rs.	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*	*Rs.*	*a.*	*p.*
1857-58 - - -	136	1	4	11,447	12	1	11,583	13	5	—		
1858-59 - - -	460	15	7	16,254	10	4	16,715	9	11	5,131	12	6
1859-60 - - -	1,944	9	6	25,997	3	2	27,941	12	8	11,226	2	9
1860-61 - - -	2,797	3	1	29,302	15	1	32,103	2	2	4,161	5	6
1861-62 - - -	3,369	6	11	35,075	14	10	38,445	5	9	6,342	3	7
TOTAL - - -	8,708	4	5	1,18,081	7	6	1,26,789	11	11	26,861	8	4

Even as regards the native coffee, it will be seen that its extended cultivation could not have commenced much before the first advent of Europeans. European cultivation is yet in its infancy; and but one estate in full bearing, giving a crop that will justify favourable

anticipations as regards other estates. In the course of a very few years more there is no doubt, under present circumstances, that the European cultivation and yield will come up to, if not overtake, the present native coffee returns, whilst native cultivation may also be expected to go on increasing in about the same or perhaps a greater proportion than it now does.

Coffee statistics.

147. As the haulut charged on coffee amounts to four annas per maund, a rupee of revenue under the head of coffee haulut may be taken as representing a cwt. of exported coffee. As little coffee, perhaps not more than 400 maunds, or 100 cwts., is consumed within the district, the amount shown in the Table in the preceding paragraph may be taken as the total production of coffee in the province. Coorg then exported last year 38,445 cwts., or 1,922 tons of coffee, worth on the spot some 8½ lakhs of rupees, on the coast some 11 lakhs, and in the English market some 15 lakhs of rupees. It is hardly possible to give even approximately the number of acres under coffee cultivation at present, as great part of it is grown on the banay of jummah and sagoo land, considered as already taxed, and a further portion is unsurveyed cardamom jungles; but a rough statement prepared in the office of coffee cultivation in other localities, save the above, viz., in pysaree or sircar jungles, show that about 49,460 butties, or 2,964 acres (the dry land butty is here calculated at six acres per 100 butties) of land, have been taken up by Europeans, of which 15,800 butties, or 948 acres of land, are at present cultivated; and that about 174,715 butties, or 10,302 acres of land have been taken up by natives, of which about 8,025 butties, or 480 acres of land are at present under cultivation. These latter figures show that under the present coffee rules, with no land tax, holders of land ought to be required to cultivate the same, under certain penalties if necessary, within a certain number of years. European planters now hold *Rs.* 5,111. 10. 11. of cardamom forest, the greater portion of which is planted with coffee not yet in bearing; 6½ cwts. per acre is considered a fair yield in Ceylon, and one European planter's estate in Coorg is supposed to have yielded about six cwts. per acre last year; but taking three cwts. as the average yield all round per acre, it shows that about or under 13,000 acres of land are at present cultivated with coffee, returning *Rs.* 38,445. 5. 9. to Government, and from nine to 15 lakhs of rupees to the grower, according to where the coffee is sent; 65,000 acres of wet land may be said to be under rice cultivation, returning to Government *Rs.* 1,30,156. 5. 7., and to the growers 15 lakhs of rupees, whilst cardamoms paid *Rs.* 27,964. 9. 10. to Government, and returned two lakhs of rupees to the cultivators. As five times more land is under rice than coffee cultivation, in the same proportion the revenue to Government from rice cultivation ought to be some 1,90,000 rupees and odd, still the charge on coffee cultivation, in a land-tax point of view, is somewhat proportionate to the tax on paddy lands, whilst the same extent of land under coffee will produce a crop valued at nearly five times the amount as if sown with paddy. Coffee production in Coorg is now within, I believe, one-twentieth of what it is in Ceylon. Of the 38,445 cwts. of coffee exported this year, 27,000 cwts. or more was shipped at Cannanore, in the Malabar district. This exportation, I believe, is sometimes confounded with and placed to the credit of the Wynaad and Malabar planters, who are stated to have exported 73,915 cwts. in 1860-61.

FORESTS AND ARBORICULTURE.

148. There are extensive forests in various parts of Coorg abounding in teak, blackwood, ebony, honnay, and other valuable timber. Poon trees, used as ship spars, are also comparatively abundant; as also sandal-wood in the lower table lands of the district. The forests of Coorg have never been systematically worked or conserved, the consequence being wastage, pillage, and loss of timber sale revenue to Government. On account of the nature of the country the difficulty of getting and putting out timber is great. Poon spars, for this and other reasons, are standing comparatively valueless in the forests, which, if transported to Bombay, would fetch upwards of 1,000 rupees each; but as the subject of an efficient forest conservancy for Coorg is now engaging the Commissioner's attention there is no need of entering here into further particulars under this head.

MINING.

149. There are no discovered mines in the district, nor is iron manufactured.

SURVEY.

150. A survey establishment in connexion with the fee simple and waste land rules is shortly expected to be granted to Coorg.

DISPENSARY.

151. The number of patients treated in the civil dispensary is given in the Table below. The prevailing diseases during the year were fevers, bowel complaints, rheumatism and catarrh.

PARTICULARS.	Remained from last Year.	Admitted in 1861-62.	TOTAL.	Died.	Average Daily Number of Sick.
In-patients - -	1	73	74	16	2⅔
Out-patients - -	14	957	971	- -	13
TOTAL - -	15	1,030	1,045	16	—

The inconvenient and distant locality of the dispensary diminishes in a great measure its utility, particularly in the rains, or else there would be a larger number of patients to show. A plan will be separately submitted for removing the dispensary into the Pettah, when no doubt it will be much more resorted to. Independent of medicines, the annual cost to Government of this institution is 1,440 rupees, but the benefits the dispensary affords are great, particularly to low land coolies and emigrants, who are so liable to be stricken down by the fever and other prevailing diseases of Coorg.

VACCINATION.

152. The vaccination returns for the year under report, as also those for the year previous, are as follows:

	Number Vaccinated.	Successful.	Failures.
Total number vaccinated in 1861-62 - - -	1,874	1,707	167
Ditto - - - - - in 1860-61 - - -	1,708	1,516	192
	166		

which shows an increase by 166 over the previous year's number, and a smaller percentage of failure. The prevalence of small-pox in a few villages of Coorg for the year under report has been noticed in paragraph 90.

CONCLUSION.

153. It is feared that this Report will be found somewhat sketchy and superficial in its details; and it is hoped that any inaccuracies and shortcomings will be excused on the ground of short time of being in charge. I am indebted for much information to the intelligent manager, Ragavachary. The English office and Mr. Ball have performed their duties satisfactorily. The head and naib sheristadars, M. Appachoo and K. Appiah, are diligent in the performance of their duties, and the departments over which they respectively preside have generally given satisfaction.

Superintendent's Office, Fraserpett,
30 June 1862.

L. Ricketts,
In temporary charge of Coorg.

(signed) *L. Bowring,*
Commissioner.

ON THE COORG BUTTY.

It is difficult to give a clear idea of the extent of a butty of wet land, a butty not being a land measure, but one of capacity, holding 80 seers; and as fields were assessed according to the nature of the soil, a small but fertile field of say an acre might yield 100 butties of paddy, and be called 100 butties of wet land, and pay assessment as such; whereas in another locality, or even in neighbouring fields, double or, perhaps, treble the extent of land would only yield the same quantity, viz., 100 butties of paddy, which also would be called 100 butties of land, and pay assessment accordingly. The mode of ascertaining the number of butties of paddy each field yielded was this: the whole field was first surveyed, and the extent of land ascertained; a 16 feet square of this field was then (with a bamboo stick, 16 feet in length, called "aluttee ghuz" or "aluttee khole," viz., measuring yard or khole) demarcated at harvest time, and the number of seers of paddy produced on the square was measured out and ascertained, and the whole field was then charged with the same proportion of crop as the square produced. It follows, therefore, that a given number of butties of land is not decisive as to the real extent of the land, unless the quality of the field is known, *i. e.*, how many seers were originally fixed as the yield for each square of 256 feet. There are seven different qualities of fields ascertained, or supposed to produce 8, 10, 12, 14, 16, 18, and 20 seers respectively on each square of 256 feet; therefore 100 butties of land may be taken to represent a land measurement of from one to six acres, according to quality; the average calculation would be about three acres, or safer to reckon, about two acres to every 100 butties.

I am indebted to Mr. Ritcher for this information.

L. Ricketts,
In temporary charge of Coorg.

(signed) *L. Bowring,*
Commissioner.

CHAPTER XIX.

CHAP. XIX. British Burmah.

BRITISH BURMAH.

CONTENTS.

SECTION I.—INTRODUCTION.

Paras.

Formation of the Province of British Burmah - 1
Geographical position and extent - - - - 2
Principal sea-ports - - - - - - 2
Arracan—physical aspect - - - - - 3
Pegu and Martaban—physical aspect - - - 4
Tenasserim—physical aspect - - - - 5
People belonging to the Indo-Chinese family - 6
Social status of the people - - - - - 7
Hill cultivation - - - - - - - 8
Foreign settlers at the sea-port town - - - 9
Scope of the present Report - - - - 10
Reference to Appendix (A.) - - - - 11

SECTION II.—JUDICIAL.

CIVIL JUSTICE.

Fewer suits than in the previous year - - - 12
Cause of diminution in suits - - - - 13
Value of stamps filed as compared with amounts litigated - - - - - - - - 14
Number of cases instituted - - - - - 15
Number of cases pending - - - - - 16
Working of the Civil Courts - - - - 17
Average duration of suits - - - - - 18
Administration of civil justice generally efficient - 19
Complete information called for as to the year 1862 20

SECTION III.—CRIMINAL JUSTICE.

Number of persons apprehended on criminal charges, and how disposed of - - - - 21
Under trial, or committed to sessions at close of the year - - - - - - - - 22
Examination and detention of witnesses - - 23
Committed to sessions, and how disposed of - 24
Number of appeals - - - - - - 25
Administration of criminal justice satisfactory - 26

SECTION IV.—POLICE.

New constabulary established - - - - 27
Frontier posts of Pegu occupied - - - - 28
Nature and position of frontier posts - - - 29
Police established throughout the country - - 30
Composition of the police - - - - - 31
Village police - - - - - - - 32
Police in Tenasserim - - - - - - 33
Villagers armed in frontier districts of Pegu - 34
Reference to Statement (E.) - - - - 35
Crime during 1861 - - - - - - 36
Reference to Returns and Appendix - - - 37
A diminution of violent crime during 1861 - - 38
Difficulty in defending the northern frontier against banditti - - - - - - - - 39
Increase in thefts and culpable homicides - - 40
Number of persons concerned in crimes - - 41
Number of conviction to arrests, and of property stolen and recovered - - - - - - 42
Diminution of crime - - - - - - 43
Municipal funds - - - - - - - 44

SECTION V.—GAOLS.

Two gaols abolished in Pegu - - - - 45
Table of cost per prisoner, mortality, and escapes - 46
Mortality - - - - - - - - 47
Cost per prisoner - - - - - - 48
Escapes - - - - - - - - 49
Labour - - - - - - - - - 50
Cost of maintenance - - - - - - 51
Financial results - - - - - - - 52
Daily average number of prisoners - - - 53

Paras.

Value of convict labour to Public Works Department - - - - - - - - - 54
Excellent management of the Moulmein gaol - 55
Convict guards - - - - - - - - 56
Convicts under sentence of transportation to be sent to Port Blair - - - - - - - - 57

SECTION VI.—REVENUE.

General result of the year's revenue - - - 58
Crops raised without irrigation - - - - 59
Increase of cultivation in Pegu - - - - 60
Increase of cultivation in Tenasserim - - - 61
Decrease in Arracan - - - - - - 62
Export of grain - - - - - - - 63
Land revenue settlement - - - - - 64
Operations during the year - - - - - 65
Settlement for 10 years - - - - - 66

CAPITATION TAX.

Rate of capitation tax increased - - - - 67

FISHERIES.

Method of taxing fisheries - - - - - 68

SALT.

Duty, how levied - - - - - - - 69

FOREST PRODUCE.

Forest produce - - - - - - - - 70

EXCISE.

Excise - - - - - - - - - - 71

SEA CUSTOMS.

Increase in amount of sea customs - - - 72

INLAND CUSTOMS.

Increase in inland customs - - - - - 73
Reference to Section XI. Marine - - - 74

TIMBER.

Timber revenue - - - - - - - - 75

STAMPS.

Stamps - - - - - - - - - - 76

INCOME TAX.

Income tax - - - - - - - - - 77

SECTION VII.—EDUCATION.

PEGU.

Government school at Rangoon - - - - 78
Karen high school and others - - - - 79
Toungoo schools - - - - - - 80
Toungoo village schools - - - - - 81
Henzadah schools - - - - - - 82
Prome schools - - - - - - - 83
Bassein schools - - - - - - - 84
Village schools - - - - - - - 85
Burmese female schools - - - - - 86
Schools maintained by Catholic mission - - 87

TENASSERIM.

Moulmein schools - - - - - - - 88
Schools for the Propagation of the Gospel Society - 89
Other schools - - - - - - - - 90

SECTION VII.—EDUCATION—*continued.*

ARRACAN.

Paras.

Government schools - - - - - - - 91
Means for vernacular education in the interior of British Burmah - - - - - - - 92

SECTION VIII.—PUBLIC WORKS.

Accounts, how rendered - - - - - 93
Total outlay - - - - - - - - 94
Budget allotment not exceeded - - - - 95
One per cent. income tax assignment not spent - 96

MILITARY.

Military works - - - - - - - - 96
Fortifications - - - - - - - - 97
Accommodation for troops - - - - - 98
Ordnance - - - - - - - - - 99
Commissariat - - - - - - - - 100

CIVIL BUILDINGS.

Outlay on civil buildings - - - - - 101
Court-houses - - - - - - - - 102
Gaols - - - - - - - - - 103
Customs - - - - - - - - - 104
Ecclesiastical - - - - - - - - 105
General - - - - - - - - - 105

WORKS OF PUBLIC IMPROVEMENT.

Total outlay - - - - - - - - 106
Municipal - - - - - - - - - 107
Marine - - - - - - - - - 108
Agricultural - - - - - - - - 109
Communications - - - - - - - - 110

ESTABLISHMENTS.

Arrears of office work brought up - - - 111
Cost of establishments - - - - - 112
Services of officers - - - - - - 113

SECTION IX.—POST OFFICE.

Lines of communication - - - - - 114
Post office chiefly used by foreign residents - - 115
Number of covers received and despatched - - 116

SECTION X.—ELECTRIC TELEGRAPH.

Line connecting British Burmah with Bengal - 117
Line to connect Rangoon and Moulmein - - 118

SECTION XI.—MARINE.

Marine of British Burmah - - - - - 119
Port establishments and rules - - - - 120
Irrawaddy flotilla - - - - - - 121
Cost of flotilla and dockyard - - - - 122
Disbursements not belonging to marine of British Burmah - - - - - - - - 123
Receipts, actual and *pro forma* - - - - 124
Receipts and disbursements on account of ports in Pegu - - - - - - - - - 125
Vessels arrived and cleared out at ports in Pegu - 126
Tenasserim steamer "Nemesis" - - - - 127

MOULMEIN PORT FUND.

Receipts and disbursements - - - - 128
Steamer "Pluto" on Arracan coast - - - 129
Arracan port funds - - - - - - 130

SECTION XII.—FINANCIAL.

Amount demand on account of the year - - 131
Expenditure for civil administration and all other departments - - - - - - - 132
Miscellaneous expenditure - - - - - 133
Financial condition satisfactory - - - - 133

SECTION XIII.—POLITICAL.

Burmah - - - - - - - - - 134
Karenee - - - - - - - - - 135
Siam - - - - - - - - - - 136
Yunan - - - - - - - - - 137

SECTION XIV.—MILITARY.

Paras.

Great reduction in strength of the troops of the Pegu Division - - - - - - - 138
Pegu Light Infantry and Arracan Battalion - - 139
Meeaday abandoned - - - - - - - 140
Arracan Battalion disbanded - - - - 141

SECTION XV.—POPULATION.

Rural population numbered yearly - - - 142
Population of each division - - - - - 143
Various races in British Burmah - - - - 144
Number of both sexes - - - - - - 145

SECTION XVI.—AGRICULTURE.

Experimental cotton cultivation - - - - 146
Variety of tobacco from Bengal - - - - 147
Tea plantation - - - - - - - - 148

SECTION XVII.—FORESTS.

Teak forests formed in three divisions - - - 149
Forests worked by private enterprise - - - 150
Salween Division - - - - - - - 151
Sittang Division - - - - - - - 152
Irrawaddy Division - - - - - - - 153
Amount received during the year for permits - 154
Works for improving communication with the forests 155
Various operations in the Forest Department - 156
Number of logs yielded - - - - - - 157
Number of logs brought from beyond the British frontier - - - - - - - - - 158
Financial result - - - - - - - - 159
The Superintendent, Dr. Brandis - - - - 160

SECTION XVIII.—TOPOGRAPHICAL. SURVEY.

PEGU.

General sketch of work done during the year - 161
Field work - - - - - - - - - 162
Mapping - - - - - - - - - 163
Establishment and cost - - - - - - 164
Completion - - - - - - - - - 165

TENASSERIM.

Survey operations - - - - - - - 166

ARRACAN.

No survey during the year - - - - - 167

SECTION XIX.—VACCINATION.

More extensively practised than heretofore - - 168

SECTION XX.—HOSPITALS AND DISPENSARIES.

PEGU.

Rangoon Dispensary - - - - - - - 169
Thayetmyo Dispensary - - - - - - 170

TENASSERIM.

CHAPTER XIX.

CHAP. XIX. British Burmah.

BRITISH BURMAH.

ANNUAL REPORT on the ADMINISTRATION of the Province of BRITISH BURMAH, for the Year 1861-62.

SECTION I.—INTRODUCTION.

Formation of the province of British Burmah.

1. ON the last day of January 1862 the three maritime provinces of India beyond the Ganges, which had been conquered from the Burmese Empire, were united under one local administration, and called British Burmah. These provinces comprised the ancient kingdoms of Pegu and Arracan, with the long line of sea-coast, known as Tenasserim. The two last of these were acquired by treaty after the war of 1825-26. Pegu was occupied and retained consequent on the war of 1852.

Geographical position and extent.

2. The Province of British Burmah lies along the eastern shore of the Bay of Bengal, extending from the mouth of the Nâf Estuary, in about 20° 50′ north latitude, to the Pak-chan river, in about 10° 50′. It possesses a direct line of sea-coast of not less than 900 English miles, and a total area of 90,000 square miles. Each division possesses one

Principal sea-ports.

principal sea-port, that is to say, Tenasserim has Moulmein; Pegu, Rangoon; and Arracan, Akyab. The first and last mentioned have risen entirely under British rule. Rangoon was founded by Alompra, the Burmese conqueror of Pegu, and was peopled by the inhabitants of the ancient capital, who were brought away for that purpose.

Arracan—physical aspect.

3. Arracan, the most northern division of the province, is separated to the eastward from Pegu and Upper Burmah by a range of mountains, which attains at its greatest elevation about 7,000 feet. The range runs nearly parallel with the line of sea-coast, and gradually lowers towards the south. The northern portion of the country has a large area of alluvial soil in the lower course of the river Kuladen and its numerous confluents. The breadth of the land there, from the sea-shore to the water-shed, mountains, is from 80 to 90 miles. A large portion of the country is hilly, covered with forest, and difficult of access. The water-shed range, separating Arracan from Pegu, extends southerly, and between that range and the sea-shore, for a length of nearly 200 miles, as far as a point of land near Cape Negrais, the country is a mere narrow strip of land. For the last 150 miles the hills seldom exceed 500 feet elevation. That portion of Arracan was united with Pegu when the latter was occupied by the British.

Pegu and Martaban —physical aspect.

4. Pegu and Martaban lie in the valleys of the Irrawaddy and Sitaug rivers. These valleys, bounded east and west by mountain ranges, are narrow in the upper portions, but expand at the delta of the Irrawaddy into a magnificent alluvial region, penetrated by a vast number of tidal creeks, and extending over 10,000 square miles.

Tenasserim, its physical aspect.

5. Northern Tenasserim is bounded to the west by the last 100 miles of the course of the great river Salween. This river, without a delta, and with passless rapids 100 miles from its mouth, which bar the ascent of boats to Central Asia, is joined at Moulmein by two streams, which facilitate communication with the interior. The breadth of land from the sea-shore to the central mountain range, which divides the province to the eastward from Siam, is about 80 miles. This space is gradually narrowed to 40 miles at the southern extremity in 11° of north latitude. There is no river of importance southward of the mouth of the Salween. The interior of the country is a wilderness of hills, thickly wooded, running in a general north and south direction, with long narrow valleys.

The people belong to the Indo-Chinese family.

6. Throughout the whole country the people belong to various branches of the Indo-Chinese family. They probably have come down, at a remote period, from the plateau of Central Asia by the courses of the Salween and of the eastern confluents of the Irrawaddy. The most advanced race is the Burmese, which, at the period of the British conquest, possessed the ruling power over the whole country. The Arracanese are of the same race as the Burmese, have the same name, and speak the same tongue, but have been isolated

isolated for many generations by their geographical position. The other tribes are the Mon or Talain, the ancient people of Pegu, also the Karen, Khyeng, Kamee, and other mountain races, which need not be enumerated. These tribes all have a general resemblance to each other; and as their dialects differ, the Burmese language, which is the mother tongue of three-fourths of the people, serves as a means of communication one with another.

Social status of the people.

7. The social condition of the people throughout the three divisions is generally similar. Everywhere in the plains the occupied land is an allodial possession. The estates on the average do not exceed eight to ten acres. The agriculture is rude, but the fertility of the soil is exuberant; there is only one grain crop in the year, and one cereal; rice is cultivated almost exclusively. The laws of inheritance and of marriage, the religious faith and the superstitious practices, the traditions, the feelings, the sympathies and the prejudices are generally alike among the people in the plains. But the hill tribes have not been won over to Bhudism; they have no idols and no priesthood; they still retain the ancient worship of the deities of the woods, the hills, and the streams; their languages are unwritten. Many of them are gradually settling in the plains, as the Karens commenced doing ages ago. All the tribes, as a general characteristic in the ordinary affairs of life, are frank, truthful, and hospitable. They have plenty of food and clothing, with reference to the climate. Whether in the hills or plains, the houses of the peasantry, built of bamboo, have the floors raised on platforms, and never placed on the ground.

Hill cultivation.

8. On the hills the people practise the barbarous mode of tillage called toungya, which consists in clearing a fresh patch of forest each season and burning the timber on the ground. They change their village sites at uncertain intervals, as the soil of the surrounding country becomes exhausted; while such wandering habits last, their condition cannot be materially improved. The remoter hill tribes are still in a savage state of isolation and independence, save in the district of Toungoo, where the ameliorating influence of education and Christianity has wrought an entire change. Even the wilder among the hill tribes, however, grow cotton, and weave cloth of strong texture and various colours.

Foreign settlers at the sea port towns.

9. At the principal sea ports Europeans and foreign Asiatics have settled in considerable numbers. Their knowledge, enterprise, and capital have opened out markets for the timber, the rice, the petroleum, and other products of the country which could not have been accomplished under the native government. The people generally, since the British conquest, have acquired a considerable amount of personal property. The small landed proprietors are independent and prosperous. The high rate of wages for a common day labourer, from six to eight annas a day, nine pence to a shilling, shows that the condition of the labouring classes is comfortable. Yet, among the Burmese and other indigenous people there is no class that can be called wealthy.

Scope of the present report.

10. In the present Report the result of the judicial and police administration of the three divisions for the year 1861, and that for revenue and general affairs up to the end of April 1862, have been combined. But as the divisions were not during the whole period subject to one local authority, and the various statements and returns were not always rendered in the same forms, the means for strict and close comparison do not exist. The present Report, however, will serve as an index for comparison between the several divisions in future Reports upon British Burmah.

Reference to Appendix A.

11. In Appendix A. will be found a tabular statement of the area, population, and revenue of each division of the province.

SECTION II.—JUDICIAL.

CIVIL JUSTICE.

Fewer suits than in the previous year.

12. The number of civil suits, original and appellate (both regular and miscellaneous) instituted in the several courts of the province during the past two years was as follows:

	1860.	1861.
Appeals and original suits - -	33,494	21,990
Miscellaneous - - - -	16,370	11,627

showing a decrease of 11,504 appeals and original suits, and 4,743 miscellaneous cases. This decrease, which is nearly uniform in all three divisions, is owing to the Stamp Act, which did not come into operation until June 1860, affecting, therefore, only the latter half of that year, whereas its effects have been felt during the whole of 1861.

CHAP. XIX. British Burmah.

Cause of diminution.

13. As stated in last year's Report, this diminution of suits is not to be attributed to any defect in the working of the courts, or falling off in the prosperity of the people. It has simply relieved the courts and the people from much hasty and vexatious litigation, to which the former excessive cheapness of legal proceedings offered every temptation.

Value of stamps filed as compared with amounts litigated.

14. In Pegu the cost of stamps filed in the several suits is in appeals 6 per cent., in original suits not quite 7 per cent. of the amount, or value of the property litigated. In Arracan it is in appeals 16 per cent., in original suits 8¼ per cent. The Stamp Law being the same in each province during the year, it is not apparent why there should be this difference, especially in the cost of stamps in appeals. This point is being inquired into.

Number of cases instituted.

15. In Table B. of the Appendix will be found a complete statement of the number of remaining suits pending from last year, instituted during the year, and pending at the close of the year in each division of the province.

Number pending.

16. The number of cases pending at the close of 1860 and 1861 respectively, is as follows:—

	1860.	1861.
Appeals and original suits - -	665	565
Miscellaneous - - - -	194	219

being 2·6 per cent. of the original suits and appeals, and 1·3 of the miscellaneous cases instituted during the year.

Working of the civil courts.

17. Table C. of the Appendix shows the comparative working of the Civil Courts in the two divisions of Pegu and Arracan. Owing to different forms having been in use in the three provinces before they were united into one, it has not been practicable to complete this statement by adding a similar return from Tenasserim.

Average duration of suits.

18. The average duration of cases has not been excessive. There are only two cases which have been long on the file, one in Pegu and one in Arracan; the reason for their remaining undisposed of is in each case satisfactorily accounted for, and the delay has been owing to causes beyond the control of the court.

Administration of civil justice generally efficient.

19. The administration of civil justice in the province generally has been efficient and satisfactory. Each of the Commissioners reports very favourably of his district and subordinate judges. That substantial justice is afforded by the several courts the paucity of appeals is a convincing proof. Of 1,314 decisions passed by the Deputy Commissioners of the eleven districts into which British Burmah is divided, only 62 or 5 per cent. are appealed against, and in a large majority of these appeals the original decree was confirmed. The appeals from the subordinate courts to the Deputy Commissioners, in like manner, bear a very small ratio to the number of decisions, and in these the decree of the court below is more frequently confirmed than modified or reversed.

Complete information called for as to the year 1862.

20. The information regarding the administration of civil justice in the courts of British Burmah during 1861 is not so full as desirable; but attention has been called to this want in order that the returns for 1862 may be complete.

SECTION III.—CRIMINAL JUSTICE.

Number of persons apprehended on criminal charges, and how disposed of.

21. In the Appendix will be found a statement marked D., showing the number of persons apprehended on criminal charges, and how they were disposed of. That portion of the statement will be remarked on under the police section. In this section the information, which refers to the working of the Criminal Courts, will alone be considered.

Under trial or committed to Sessions at close of the year.

22. The number of prisoners remaining under trial or committed to the sessions at the close of the year was 215, or ·08 per cent. of those brought to trial.

Examination and detention of witnesses.

23. Twenty-one thousand five hundred and eighty-six witnesses were examined, of whom 17,358, or four-fifths, were not detained more than one day. In this respect the divisions of Tenasserim and Arracan leave nothing to be desired. Pegu does not appear so favourably, but in this division the undue detention of witnesses is confined to the districts of Bassein, Myanoung, and the town of Rangoon, in the order in which they are named. The detention of witnesses in the Bassein district was noted as excessive in last year's report; and though considerable improvement is manifest during the year under review, it is not creditable that this district should be again distinguished from all the other districts of the province by the length of time witnesses are kept waiting before they are examined and discharged.

24. The

24. The committals to the Sessions Courts, and the manner in which they were disposed of, are shown below:—

Committed to Sessions, and how disposed of.

DIVISION.	Committed to Sessions.	Convicted.	Acquitted.	Died or Escaped.	Pending.
Pegu - - - -	73	48	12	4	9
Tenasserim - - -	73	55	17	- -	1
Arracan - - -	70	57	13	—	—
	216	160	42	4	10

Number of appeals.

25. Out of all the sentences passed by the Deputy Commissioners of the several districts, only 123 were appealed against with the following result:—

DIVISION.	Instituted.	Confirmed.	Modified or Reversed.	Pending.
Pegu - - - - - -	23	17	3	3
Tenasserim - - - - -	37	27	10	—
Arracan - - - - -	63	38	25	—
	123	82	38	3

Nothing can prove more satisfactorily that the sentences passed by the Deputy Commissioners in charge of districts and the town magistrates are generally sound and just.

Administration of criminal justice satisfactory.

26. The Commissioners of the several divisions report very favourably of the manner in which the several officers under them have discharged their magisterial functions, and the administration of criminal justice throughout the province is satisfactory.

SECTION IV.—POLICE.

New constabulary established.

27. Early in the year 1861 the organization of the police in Pegu, on the plan recommended by the police commission, which was subsequently embodied in Act V. of 1861, was commenced. The duty was entrusted to Captain H. T. Duncan as Inspector General. He began with the district of Prome, which, from being a border district, liable to the attacks of banditti from the Burmese territory, required early attention.

Frontier posts of Pegu occupied.

28. There were at that time two lines of posts along the frontier, extending from the Arracan hills on the west to the central ridge on the east, which divides the valley of the Irrawaddy from that of the Sittang. The more important of the posts were garrisoned by men of the Pegu Light Infantry. As the plan on which the police was to be embodied rendered it necessary to disband that battalion, those men who volunteered to enter the constabulary were enrolled therein, and at once, with others who were transferred from the former police corps, were stationed in the frontier posts. These men were all armed with muskets as being liable to attacks by armed parties from without.

Nature and position of frontier posts.

29. The front line of posts, facing to the north, is situated close on the border. It consists of eighteen stockaded posts, about eight miles apart from each other. The second line of posts is about 15 miles in rear of the advanced line; it consists of 10 posts. None of the posts on the Prome frontier have less than 20 men. Each communicates daily with the posts on its flanks. The superior officers constantly patrol along the lines.

Police established throughout the country.

30. After the more important object of posting men at the frontier stations had been completed, police posts were gradually established in such other parts of the Prome district as the nature of the country and the dangers to be guarded against rendered requisite. The duties of the gaol guards, the court-house guards and the treasuries were taken, and the municipal police of the towns was brought under the same discipline in every respect as the Government force.

Composition of the police.

31. The police is composed mainly of Burmese, who are the only men fit for service on the frontier and in the interior. In the sea-port towns and cantonments natives of India are chiefly employed, as being more likely to understand those with whom they are brought in contact. Captain Duncan, the Inspector General, observes as to their qualities:—

qualities:—"The marauding bands who cross our northern frontier are well armed and bold in their attacks, but the police have shown no reluctance to encounter them, even when considerably outnumbered."

Village police.

32. The village police remains as it was before, but much reduced in number. It works in communication with the constabulary. In each hamlet, where deemed necessary, an inhabitant receives the title of Kyedongyee. He is appointed by the district officer. He is exempted from payment of capitation tax, and is bound to report to his immediate superior, the goung, all crimes occurring within his hamlet. The goung is a paid village or parish constable. He works in close communication with each adjoining police post. He has under him an average area of 80 square miles. Both of these village policemen are found to be of the greatest use to the constabulary, and are, as a body, respected by the people.

Police in Tenasserim.

33. It will not be necessary to describe the introduction of the constabulary into each district or division of British Burmah. It will suffice to record that by the end of August the work was accomplished in Pegu, and the Inspector General proceeded to carry out the same plan in Tenasserim. The north eastern portion of that division, where only a river forms the boundary with the Shan States subject to Siam, required careful attention. There the incursions of banditti were frequent, chiefly with the object of plundering timber dealers proceeding into the forests with specie to carry on their work. They also attacked such villages as seemed likely to yield plunder. By the end of the year the work of that part, and down the long line of coast to the southward, was accomplished.

Villagers armed in frontier districts of Pegu.

34. In the districts near the frontier it has been found desirable to allow some of the villagers to possess fire-arms for their own defence; but great care has been taken to allow this privilege to well-known men. The arms are paid for by the recipients, and a register is kept of them. The owners are not allowed to dispose of the arms without sanction. Many villagers have shown themselves well worthy of the confidence reposed in them.

Reference to Statement E.

35. In Statement E. of the Appendix will be found a statement showing the full strength and cost of the police in two divisions of British Burmah. That of Arracan has not been added, as the police was not formed there until the middle of the year 1862. The return shows a force of 4,401 men of all ranks in the regular police; 217 boatmen and 670 village police. The annual cost is 9,71,003 rupees, exclusive of the Inspector General.

Crime during 1861.

36. Having described the existing police force, the next point will be to narrate the amount and nature of crime, and the success which has been obtained in preventing it, or in discovering the perpetrators during 1861.

Reference to Returns and Appendix.

37. In Appendix F. will be found a statement of the number of crimes ascertained to have been committed in each division during the last two years. The former classification of crime has been retained, but in future, one suited to the penal code of India will be adopted. In Statement D., as showing the working of the police, the number of persons arrested, convicted and acquitted, with the value of property stolen and recovered, are shown. The two documents together will fairly illustrate the state of crime and the efficiency of the police in British Burmah.

A diminution of violent crime during 1861.

38. A reference to Appendix F. will show that in 1861 there has been a diminution in violent crime compared with what occurred in 1860. Still not less than 67 crimes, which involved murder or wounding with intent to murder, were committed. This is a very large number to occur in a population of about a million and three quarters of souls. But it must be remembered that the majority of the worst crimes were perpetrated by armed bodies who crossed into British territory to plunder, and in Arracan the plunderings committed by large bodies of armed men are the wars of hill tribes, either among themselves or attacks upon villages in the plains. But the number of simple murders within the province, without the accompaniment of plunder, shows a terrible disregard of human life.

Crimes of the First Class of Atrocity, or all attended with Murder, or with wounding with intent to murder.

Year.	Number.
1860 - - -	78
1861 - - -	67
Less - -	11

Difficulty in defending the northern frontier against banditti.

39. On the border of Pegu, notwithstanding the numerous posts and the vigilance of the guards, the country is so rugged, so thinly inhabited, and so covered with jungle, that it is easy for armed parties to enter at various points, by twos and threes, penetrate within the line of stations, and unite at an appointed spot for attack, without being perceived by patrolling parties.

Increase in thefts and culpable homicides.

40. While in crimes there has been a decrease, yet in ordinary thefts there has been an increase, except in Arracan. It is probable that, under the new police, petty thefts are more fully reported than formerly. The number of cases of culpable homicide is large, being 28 against 17 of the previous year, and shows the readiness with which quarrels and disputes among these people are followed by blows, which too often prove fatal.

Number of persons concerned in crimes.

41. Throughout the province, in 1861, there were 31,500 persons supposed to be concerned in crimes of every description; of these, 25,401 were arrested, of whom 9,159 were acquitted, and 15,912 convicted. The rest were otherwise disposed of, or were still under trial at the close of the year. In future years, the number of persons concerned in heinous and in petty offences will be separately shown.

42. The

42. The proportion of convictions to arrests for the two years, omitting fractions, is 64 and 62 per cent. respectively, and the amount of property stolen was 2,96,809 rupees in the former year, against 2,16,346 rupees in the latter; that recovered being 72,852 rupees and 52,909 rupees, being nearly 24 per cent. for each year. Number of convictions to arrests, and of property stolen and recovered.

43. On the whole there has been a marked decrease in crime, especially in violent crime, during the year; but no satisfactory explanation has ever been given of the strange variation in the amount of crime in British Burmah. Up to the year 1858, crime had much diminished in Pegu. During that year gang robbery especially prevailed, after having been effectually controlled in the two or three preceding years, when the disturbances, consequent on the year 1852, had subsided. Since 1858, crime has gradually diminished, and, with the new police arrangements, it is hoped will be put down, as far as is possible in a country, nine-tenths of which is covered with jungle, and affords such facilities for gangs of robbers to lurk in. Diminution of crime.

44. The sums raised for municipal objects, including police, in each division during the year, were as follows:— Municipal funds.

	Rs.
Pegu - - - - - - - - - -	92,414
Tenasserim - - - - - - - - -	37,370
Arracan - - - - - - - - -	—
Rs.	1,29,784

SECTION V.—GAOLS.

45. THE total number of gaols existing in the province during the year was 13, but of these, two in Pegu, namely those at Henzadah and Mengyee (Tharrawaddy), were abolished during the year. The convicts were transferred to Rangoon. Two gaols abolished in Pegu.

46. The following Table shows the cost for each prisoner, the mortality, and the escapes in each gaol of the province during the year 1861:— Table of cost per prisoner, mortality and escapes.

Divisions.	GAOLS.	Average Daily Number.	Number of Deaths.	Rate per Cent. of Deaths to Average Strength.	Total Cost per Prisoner.	Number of Escapes.	Number of Re-captures.	REMARKS.
					Rs. a. p.			
Pegu	Rangoon	803	20	2½	71 2 11	8	3	
	Bassein	294	10	3½	66 9 7	1	3	
	Prome	216	16	7	85 3 1	4	2	
	Henzadah	283	17	5	63 14 5	6	6	Gaol abolished, 11 Sept. 1861.
	Mengyee	170	2	1¼	76 7 2	5	3	Gaol abolished, 6 Aug. 1861.
	Toungoo	142	21	17	92 12 8	9	9	
	Total	1,908	86	6	76 — —	33	26	
Tenasserim	Moulmein	1,510	113	14	57 1 8	53	43	
	Shoay Gyeen	78	5	6	95 3 11	17	1	
	Tavoy	259	—	—	77 3 7	—	—	Returns defective.
	Mergui	292	20	6	68 8 2	25	19	
	Total	2,139	138	6½	74 — —	95	63	
Arracan	Akyab	380	30	7·90	49 9 3	3	1	
	Ramree	296	23	7·77	54 13 —	—	—	
	Sandoway	225	16	7·11	39 12 3	—	2	
	Total	901	69	7¼	48 — —	3	3	
	GRAND TOTAL	4,948	293	6¾	69 — —	131	92	

47. The rates of mortality among prisoners in all the gaols of the Pegu division are lower than they were last year. The rates are excessive in none but the Toungoo gaol. Five died of small pox, and the medical officer, Dr. Gordon, remarks, "that the prisoners were generally healthier than the inhabitants of the town." In the gaols of the other division the rates are all moderate, except at Moulmein. In that gaol there are a large number of life prisoners, and many are kept in out-gaols for the purpose of being near to their work. A larger number of deaths might, therefore, be expected than in gaols where the convicts are all sentenced to stated terms of imprisonment, and are all within one enclosure. Mortality.

48. There has been a general decrease in the cost of maintenance for each prisoner. In some gaols the decrease has been very great.

Cost per prisoner.

In the gaols of the Arracan division the cost is lower than in any of the other gaols. A good deal has yet to be done in the Pegu division, and also in the Shoay Gyeen gaol, for the reduction of expense on account of prisoners.

Escapes.

49. The number of escapes from the gaols of the Pegu and Arracan divisions is not large. In the Tenasserim division, the large number of escapes from the Moulmein gaol is said to be owing to the prisoners having heard that they were to be transferred to the Andamans. Most of those who escaped were recaptured.

Labour.

50. Owing to the high price of common labour in British Burmah, it is generally more profitable to employ the convicts outside than inside the gaol walls. Only a very small proportion of them are employed on the manufactures which can be carried on within the gaol walls. This description of work was carried on with much success in the gaols of Arracan.

Cost of maintenance.

51. The following Statement shows the gross cost of maintenance of each gaol, with the exception of two, of which returns are wanting, and the value to Government, or the municipal authorities, of the labour obtained from the working convicts, *i. e.*, the actual cash profit derived from the gaol manufactures, and the value of the other labour performed by the convicts for Government, for which cash was not required, calculating the daily hire of a convict at three-fourths of that of a free labourer:—

Divisions.	1. GAOLS.	2. Total Cost of Maintenance.	3. Actual Cash Earnings.	4. Value of Labour supplied to Government not paid for.	5. Total Value of Labour.	REMARKS.
		Rs.	*Rs.*	*Rs.*	*Rs.*	
Pegu	Rangoon	56,872	2,811	56,138	58,949	Only the value of the labour of those convicts who are employed by Government in other departments than the gaol, is included in column 4. The value of labour of those employed as gaol servants, or in other offices connected with the gaol, is excluded.

	GRAND TOTAL — *Rs.*	2,76,564	35,186	1,12,244	2,52,948	

Financial results.

52. The gross financial results of the year, exclusive of the two small gaols of which the returns are wanting, therefore, were as follows:

	Rupees.
Gross cost of maintenance	2,76,564
Value of labour	2,52,948
Balance against Gaols	*Rs.* 23,616

Daily average number of prisoners.

53. The average daily number of prisoners in the gaols was 4,948, the average annual cost per prisoner, therefore, is only *Rs.* 55. 14. 3.

Value of convict labour to Public Works Department.

54. At Rangoon and Moulmein the great majority of the labouring prisoners were employed by the Public Works Department. The value of the labour performed by them was estimated by that department as follows:

	Rupees.
Rangoon	35,408
Moulmein	71,156
Total	*Rs.* 1,06,564

Excellent management of the Moulmein Gaol.

55. The gaol of Moulmein, under the superintendence of the executive engineer, Captain J. G. R. Forlong, was a model as regards the use to which the labour of the convicts

convicts out of doors was turned; the general discipline maintained, and the economy of expenditure. In all the gaols discipline has been maintained as far as is practicable when convicts go outside the walls to work, and as much work as possible has been exacted from them.

Convict guards.

56. The system of employing convicts, instead of hired peons, as guards over prisoners has been largely introduced into the Pegu gaols during the year, and has met with success. The convict warders have portions of their sentences remitted for good behaviour. Colonel Fytche, the Commissioner of the Tennasserim Division, states on this subject, as regards the Moulmein gaol:

"The convict police have been found more efficient than the free police, and with very few exceptions faithful to the trust imposed upon them. The guards in the interior of the gaol are entirely composed of convict peons. The free police are distributed amongst the guard of convict gangs working outside the gaol, and are useful more as spies than guards."

Convicts under sentence of transportation to be sent to Port Blair.

57. Orders have been received for all transported convicts at Moulmein to be transferred to the Andaman Islands. This measure will be carried out when the season admits of the men being shipped for a sea voyage.

SECTION VI.—REVENUE.

General result of the year's revenue.

58. The year 1861-62 has been a prosperous one for each Division of British Burmah. Plentiful harvests have been accompanied by an increasing trade; and though the amount of annual taxation falls on each person about double what it does on the people of any other British possession in the East, yet there is no symptom of the burden being generally too great, although partial alleviation is in some instances desirable. The amount demand of revenue for the two past years, omitting fractions, has been as follows:—The amount for each Division, shown separately, will be found in the Statement of the Appendix marked (J).

	1860-61.	1861-62.
	Rupees.	*Rupees.*
1. Land	26,14,152	26,56,710
2. Capitation	14,60,519	17,33,035
3. Fisheries	4,77,055	5,06,568
4. Salt	95,830	73,704
5. Forest Produce	6,893	9,073
6. Excise	8,43,608	7,90,115
7. Sea Customs	11,86,192	14,33,312
8. Inland Customs	5,78,971	5,31,769
9. Port Dues and Marine Receipts	1,90,523	2,85,863
10. Timber	5,46,842	6,84,297
11. Fines and Fees	1,74,493	1,47,362
12. Unclaimed Property	9,517	5,789
13. Postage Stamps	40,875	40,793
14. Stamps in Civil Suits	52,243	2,42,591
15. Income Tax	2,14,341	3,33,907
16. Karen Chiefs' Tribute	3,874	3,874
17. Miscellaneous	30,997	48,886
TOTAL *Rs.*	86,26,925	96,27,648

Land to the amount of 16,097 rupees was sold in the town of Rangoon.

Ditto 466 „ in Bassein.

Ditto 3,884 „ in Moulmein.

Ditto 98 „ in Mergui.

Ditto 478 „ in Akyab.

These sums are not included in the regular revenue.

The following was the demand for local taxes:—

	1860–61.	1861–62.
	Rupees.	*Rupees.*
Municipal	1,30,269	1,29,784
Bazars	79,614	67,768
Ferries	17,638	19,503
Rent on Town Lots	63,323	56,978
Cattle Pound Fund	4,915	4,804
Convict Labour Fund	1,60,855	10,700
Revenue Record Fund	-	24
Tulabana Fund	-	484
TOTAL Rs.	4,56,644	2,90,045

LAND REVENUE.

Crops raised without irrigation.

59. In British Burmah the annual grain crop is dependent solely on the fall of rain for its growth, and failing which the cultivator has no resource. This is somewhat hazardous; but in the greater part of the country the cultivators generally keep grain in reserve to the following year. The rain has never been known to fail, though some seasons, especially in Upper Pegu, are more favourable than others. The past season was, on the whole, a good one; but there was not a sufficiency of rain in the northern portion of the Prome district.

Increase of cultivation in Pegu.

60. In Pegu the greatest increase of cultivation occurred in the district of Rangoon. In Myanoung, which is the name of the combined districts of Henzadah and Tharawaddy, a serious loss occurred from the bursting of a large embankment mentioned in last year's report as having been built to keep out the inundation of the Irrawaddy.

In Tenasserim.

61. In Tenasserim there was an increase, due partly to extension of cultivation, and partly to more careful measurement of the area cultivated.

Decrease in Arracan.

62. In Arracan there was a decrease of land revenue, owing to a murrain among the cattle, which caused much land to be left fallow.

Export of grain.

63. The land revenue is mainly dependant upon the export of grain. The quantity sent away from each division is shown as follows:—

	Tons.
Pegu	216,144
Tennasserim	30,705
Arracan	106,830
Total	353,679

Land Revenue Settlement.

64. During the quarter the arrangements for the settlement of the land revenue were carried on in the districts of Rangoon and Bassein under the direction of Captain McMahon. As has been explained in former reports, the object is two-fold:—First, to fix rates per acre on each queng or block of land having well known boundaries; and second, to settle with the cultivators the annual revenue payments for 10 years, instead of the annual re-assessment heretofore prevailing.

Operations during the year.

65. The field work for the year commenced on the 22d November 1861 and closed on the 10th May 1862. The operations extended over country containing 9,400 square miles, within which area 131,000 acres were assessed. More might have been accomplished had the cultivated lands been less scattered, but they were much further apart from each other than the lands assessed in former years. The result of the revision of previous rates per acre has been, that on 687 quengs the rates per acre have been increased; on 132 quengs the rates have been decreased; and the rates on 278 acres have remained unaltered. The net increase of annual assessment in consequence of the season's operations will be 35,800 rupees.

Settlement for 10 years.

66. With reference to leases, or a settlement of land revenue for 10 years, the year's operations cannot be termed successful. The inhabitants of 40 village tracts, representing 7,600 cultivated acres of land, paying annually 14,800 rupees to Government, have accepted leases. Fifteen separate cultivators, possessing 794 acres, paying annually 312 rupees, have also taken leases. But that is a small proportion of the whole area visited and assessed. The prejudice or opposition to the leases still continues strong in the Rangoon district. In that of Bassein the cultivators were found less determined in their opposition.

CAPITATION TAX.

Rate of capitation tax increased.

67. The rate of capitation tax was increased 25 per cent. in Pegu and Tenasserim in consideration of the license and tobacco taxes not being imposed, and also on account of the income tax not being extended beyond the chief towns. The present rate of capitation tax in Pegu is five rupees per annum for a married family. This amount, there is no doubt, is now more readily paid by the people than was the rate of four rupees when the tax was first imposed in 1853. The increased amount collected partly arises from the increased population. In some of the towns, where a considerable non-Burmese population exists, a tax upon the area of houses has been substituted for the capitation tax.

FISHERIES.

Method of taxing fisheries.

68. The nature of this item of revenue has been explained in former reports. The lakes, fens, and ponds are rented out within defined limits for a fixed annual sum to the villagers in the vicinity. Licenses are granted to applicants at fixed rates for the right to work nets and other implements used in fishing on the sea coast and in the rivers and navigable streams. The greater part of the fish caught is made into fish paste, for sale in the interior. No revenue is raised on fisheries in Arracan.

SALT.

Duty how levied.

69. A small duty is levied on the manufacture of salt. A fixed rate for the year is placed on the vessels used throughout the season for boiling the brine. As the people pay a capitation tax, the amount of duty on the manufacture of this mineral is not rated higher than about three per cent. on the value thereof. The rates of duty, however, have hitherto varied in the different divisions of British Burmah, and it will now be necessary to equalise them. The amount realised from this source of revenue varies considerably in different years. In Pegu and Arracan there has been a decrease during the past year. In Tenasserim there was a slight increase.

FOREST PRODUCE.

Forest produce.

70. In this are included the sums paid to Government for the right to collect bees' wax and edible birds' nests, found in caves on islets off the coast.

EXCISE.

Excise.

71. Under excise are included the abkaree collections, being fees on distilleries and licenses to sell liquor; also net profit on the sale of opium.

SEA CUSTOMS.

Increase in amount of sea customs.

72. The increase has been considerable, arising chiefly from the large export of rice from Pegu and Arracan. In the Appendix will be found Tabular Statements, marked G., H., I., giving full details of the trade and customs duty. The duty realised on account of sea customs, including fines and confiscations during the year, has been 144,500*l.* The total value of the trade for the year by sea was as follows:—

	Rs.
Imports	2,62,55,849
Exports	2,88,56,079
TOTAL	*Rs.* 5,51,11,928
	or, £. 5,511,192

INLAND CUSTOMS.

Increase in inland customs.

73. Inland customs exist only in the Pegu division. In the year under review there was a fair increase arising from the augmented export of salt, salted fish, and grain. The total amount collected was 61,900*l.*

Reference to Section XI., Marine.

74. Port dues and marine receipts are explained in Section XI., Marine.

TIMBER.

Timber revenue.

75. The revenue arising from timber consists of fees derived from the issue of permits to work in the Government forests; the price paid on logs brought down from the Government forests by permit-holders; the price realised by sale of timber brought down by the forest department; the duty on foreign timber brought within the British territory, and duty on timber from forests owned by private persons. These sources of revenue are more particularly explained in Section XVII., Forests. But the timber revenue department in the Tenasserim division is a distinct office, where duty is levied on timber, whether from British or foreign forests, as passed from the bonded station for sale, or otherwise. The sum collected on this account at Moulmein during the year amounted to 2,87,412 rupees. This large amount arises from the vast quantity of foreign teak timber brought down, amounting to 106,432 logs.

Stamps.

STAMPS.

76. There is a steady increase in stamps used in civil suits and for law papers.

Income tax.

INCOME TAX.

77. The income tax is limited in British Burmah to the chief towns. The amount yielded appears sufficient to show that excessive concealments do not take place, but that, on the whole, incomes and profits are fairly taxed.

There are no other items of revenue which call for special remark.

Waste land not yet sold.

No land has yet been sold under the Resolution of Government, dated the 17th October 1861.

SECTION VII.—EDUCATION.

Pegu Government School at Rangoon.

78. IN the report of last year on Pegu, it was stated that the Government school at Rangoon was not in a satisfactory state. The classes were examined by the committee at the close of the term of 1861. The report states that no improvement had then taken place. There were 29 scholars.

Karen High School and others.

79. The Pegu High School at Kemendine, near Rangoon, for Karens, under the charge of Mrs. Vintor, had an average of 110 pupils during the year. At a public examination at the close of the year they acquitted themselves satisfactorily. The first class study English. There are in connexion with this school 25 village schools for elementary instruction, having 350 scholars.

A separate school for Pwo Karens is under the care of the Rev. Mr. Brayton. It has an average attendance of 50 scholars, and, though lately established, is making good progress.

A theological institute, for the instruction of Karens who are designed for the ministry, may also be noticed here. The principal is the Rev. Dr. Binney. The study is designed to be biblical and theological only, but in some cases a previous elementary course of instruction is necessarily given. There were 57 students during the past year.

Toungoo schools.

80. At Toungoo, the Karen Young Men's Normal School has progressed favourably. It had an average of 70 pupils during the session. A powerful telescope, given by Government to the institution, was received during the year, and has been turned to good account. The Karen Female Institute is superintended by Miss E. Mason; had from 40 to 50 young women students. Their progress was satisfactory.

Toungoo village schools.

81. One hundred and thirty-five village schools were in operation in the mountains during the year, having 2,186 scholars. On the progress of the course of education among the mountain Karens, the Rev. Dr. Mason remarks as follows:—"Judging the Karens by their deeds, there is no lack of interest in the work of education. Their contributions for the two boarding schools in town amount to 1,488 rupees, and their contributions in money to their teachers in the jungles were upwards of 1,100 rupees. Besides this, they brought in 450 rupees this year towards the erection of a dwelling-house on the institution grounds for the American or European teacher of the young men's school."

Henzadah schools.

82. At Henzadah, the Rev. Mr. Thomas, in consequence of sickness in the district, reduced the Karen Normal School in the town, and commenced some schools in the interior of a higher order than heretofore. The benefits of more advanced education were given to a greater number of pupils, but they could not be so thoroughly superintended as if all had been assembled at the town. There were in all 90 scholars instructed through the Karen language. In addition to the studies of former years, surveying with the prismatic compass has been commenced last year.

Prome schools.

83. In Prome, four elementary schools, having 100 scholars, have been established, under the care of the Rev. Dr. Kincaid. Burmese and Khyengs are chiefly taught.

Bassein school.

84. At Bassein there is a very flourishing school under the Rev. Mr. Beecher, having 97 scholars in the vernacular department, and 108 in the Anglo-Karen department. This school has no grant-in-aid yet. It well deserves one.

Village schools.

85. In the interior there were 25 village schools, with 611 scholars; also a Pwo Karen high school, with 78 pupils, under the care of the Rev. Mr. Van Meter, and 109 of the same race in village schools.

Burmese female school.

86. The school maintained in Rangoon by the Burmese Female School Society contains 20 pupils. They are taught, through the Burmese language, in elementary knowledge, and sewing and weaving.

Schools in Pegu maintained by the Catholic Mission.

87. From the Right Rev. Bishop Bigandet, the following information has been derived regarding the schools of the Catholic Mission in Pegu. A boys' school at Rangoon has an average daily attendance of 125. The boys are chiefly Eurasians and Burmese. The instruction is through the English language, but Burmese is also taught. There is likewise a girls' school, having 35 pupils. Schools have been established in the interior of the

the district of Rangoon, Bassein, and Myanoung. These are chiefly for the instruction of Karens. They contain altogether 120 pupils. The boys' school at Rangoon is especially deserving of a grant-in-aid, which it is hoped will soon be given.

Tenasserim—Moulmein schools.

88. In Tenasserim, there is a Government school at Moulmein, which the Commissioner reports "has been falling off in the number of pupils for some years past, and it has been recommended that it be abolished altogether, and grants-in-aid bestowed upon the schools attached to the different missions and private schools." The average number of pupils attending throughout the year was 61.

School of the Propagation of the Gospel Society.

89. A school maintained by the Society for the Propagation of the Gospel exists at Moulmein; it was established in 1859, and during the past year has been under the direction of Mr. E. Marks. The school had 285 pupils, chiefly Burmese and Talaings; all pay a school fee; there are 40 boarders. The instruction is given almost entirely in English. The school has been very successful. The progress it has made, and the consideration in which it is held by the people of the country are very creditable to the management of Mr. Marks, and of those who preceded him; it well deserves a grant-in-aid.

Other schools.

90. The other schools at Moulmein are a boys' and a girls' school under the American Baptist Mission, having 70 and 40 pupils respectively; these are chiefly Burmese and Talaings. A boys' school of 135, and a girls' school of 70 under the Catholic Mission, and a Church of England Orphanage with 20 pupils. In all these institutions the education given is plain and useful. Grants-in-aid, it is hoped, will be bestowed on them when funds are available.

Arracan Government schools.

91. In Arracan there are two Government schools,—one at Akyab and one at Kyouk Phyoo. The former contained during the year 107 paying pupils; they are taught in English and Burmese; they all pay schooling fees. The head master is Mr. Fell. The Commissioner reports favourably on the school. At the Kyouk Phyoo School there were 71 pupils studying English and Burmese; there is no first or head class to this school; the boys, it is stated, having left, and no others being sufficiently advanced to rise into that class. The master is a Mr. de Costa.

Means for vernacular education in the interior.

92. On the whole the means for giving a sound education to the masses of the people in British Burmah are, as compared with their numbers, not inadequate. There is ample scope for the beneficial extension of grants-in-aid from Government to the schools maintained by the several missions in the province, and such aid will probably lead to more schools being established. There are no existing means for carrying out a general plan of vernacular education in the interior by direct Government agency, and the best substitute for such a plan will be that of supporting the village schools already established by missionaries, in which a sound elementary education is imparted.

SECTION VIII.—PUBLIC WORKS.

Accounts, how rendered.

93. THE accounts of the Public Works Department in British Burmah have only been made up for the two divisions of Pegu and Tenasserim. The Arracan Public Works Accounts for 1861-62 are included for that year in the Bengal disbursements.

Total outlay.

94. The total Imperial outlay during the year on public works, including an advance of 94,056 rupees made to local funds, has been 14,16,354 rupees, in addition to which 34,954 rupees have been defrayed from local resources, and convict labour has been given to the value of 75,096 rupees, forming an aggregate total of 15,26,404 rupees.

Budget allotment not exceeded.

95. The budget cash allotment for Pegu was 11¼ lakhs of rupees, of which 11,48,855 rupees were drawn; and for Tenasserim 2¼ lakhs, of which only 1,72,200 rupees were required owing to reductions effected. No money has been drawn within the year from the 1 per cent. income tax assignment, the allotment having been received too late to be turned to profitable account within 1861-62. It will be used in the current year 1862-63.

One per cent. income tax assignment not spent.

MILITARY.

Military works.

96. The total outlay on military works and repairs has been 8,52,451 rupees, of which 6,12,393 rupees have been expended on new works.

Fortifications.

97. At Thayetmyo the north and south guard-houses to the redoubt have been constructed. At Toungoo the redoubt is not yet completed owing to restrictions on expenditure and the withdrawal of the sappers. At both these frontier stations arrangements have been made for placing the Government treasure within the redoubts.

Accommodation for troops.

98. At Rangoon the barracks for the European Artillery and Infantry have been shingle-roofed as a precaution against fire; also the accommodation has been similarly extended so as to provide for a full regiment, and three large shingle-roofed barracks have been built for the married families. At Thayetmyo temporary accommodation has been completed for a wing of European infantry, as also for the Artillery Driver Company, and

for their married families. The temporary barracks at Meeaday have been removed and re-erected at Thayetmyo, and stables and other minor buildings have been erected for the artillery. At Toungoo the European infantry barracks have been shingle-roofed, and many of the minor buildings improved. At Moulmein the barracks have been adapted for the accommodation of the married families of the Pegu Sapper Battalion. The outlay upon new works for accommodation for troops has been 3,76,412 rupees.

Ordnance.

99. At Rangoon the arsenal buildings in progress last year have been completed. A guard-house has been built for the magazine; iron verandahs have been put round the general store-room, and the enclosure wall of the arsenal is in progress. At Thayetmyo a gun-shed, laboratory, workshop and forge, a second magazine, and an ordnance godown have been built. At Toungoo the ordnance godown in the redoubt has been all but completed, and the magazine quite so. At Moulmein a magazine guard-room has been built. Total ordnance outlay for new works 1,27,090 rupees.

Commissariat.

100. At Thayetmyo the commissariat depôt has been completed. This fine block of permanent buildings has altogether cost 1,14,265 rupees. A fire at Thayetmyo would have cost Government three times that sum in the value of commissariat stores. At Toungoo a bakery and some minor buildings have been constructed. Total commissariat outlay for new works 50,579 rupees.

CIVIL BUILDINGS.

Outlay on civil buildings.

101. The outlay on civil buildings and repairs has been 2,42,249 rupees.

Court houses.

102. At Henzadah the court-house has been shingled. At Myanoung court-house accommodation has been provided by purchase, and by the conversion to that purpose of the buildings of the late Pegu Light Infantry. The new court-house at Moulmein has been well advanced towards completion, and that at Mergui is in progress. A circuit house has been provided at Moulmein by purchase. Outlay on new works 67,550 rupees. A new court-house is in progress at Kyouk Phyoo, not included in the above expenditure.

Gaols.

103. At Bassein the gaol surrounding wall has been completed. At Rangoon two new wards have been built for debtors and females; also a gaoler's house and gate guard-room. At Tavoy a gaol was commenced but postponed; and at Moulmein gaol work-sheds have been built, and several other minor works. Outlay, 59,725 rupees. Six new temporary wards were also completed in the Akyab gaol in the early part of the year.

Customs.

104. For the Customs Department nothing has been done during the year beyond the re-roofing of the Moulmein Custom-house.

Ecclesiastical. General.

105. At Rangoon, Trinity Church, in the town, has been commenced, and the construction of a permanent post-office is in progress.

WORKS OF PUBLIC IMPROVEMENT.

Total outlay.

106. The total outlay on works of public improvement has been 2,89,587 rupees.

Municipal.

107. At Rangoon a commencement has been made upon the permanent surface drainage works for the town, and iron tramways have been laid down for the conveyance of earth for filling in low ground. At Rangoon 38,472 rupees, and at Moulmein 33,891 rupees have been spent in the repairs and maintenance of the town roads, besides numerous minor works executed. At Bassein the bazar has been completed, and bazars have been ordered for Prome, Thayetmyo, Shoay Gyeen and Toungoo, and one is in progress in Mergui.

Marine.

108. The Dalla Dockyard has had its store godown completed, and the guardhouse gate and surrounding wall have been constructed. A new marine office is in progress at Moulmein, and extensive works in connexion with a new harbour jetty and sea-retaining wall have been in progress at Akyab.

Agricultural.

109. A large embankment, termed the Anouk Pek bund, has been constructed in the Henzadah District to protect land from inundation. About 15,000 acres of cultivation are thus protected.

Communications.

110. The mountain road leading from Prome into Arracan has been cleared, repaired and improved, as have also the roads from Prome to Poungday and to Meeaday. The road from Moulmein towards Yey has been opened out for upwards of 20 miles, a branch road has been constructed to Mopoon, a road made to Tongwine, and another nearly completed from Oboo to Nanutay. Roads have been projected towards the Shan frontier from Moulmein. The total amount expended on the improvement of communications has been 1,17,010 rupees.

ESTABLISHMENTS.

Arrears of office work brought up.

111. Great progress has been made in the adjustment of arrears of Public Works Accounts; 1,314 bills, aggregating 43,24,340 rupees, have been prepared, and Executive Engineer's accounts, including unadjusted arrears from 1859-60, have been passed to the amount of 29,21,912 rupees.

112. The

Cost of establishments.

112. The cost of establishments in the Public Works Department has been 229,367 rupees, or 15 per cent. on the total expenditure, or nearly 17¾ per cent. on the net expenditure.

Services of officers.

113. The Chief Engineer notices with approbation the services of the undermentioned Officers:—

Assistant to the Chief Engineer, Lieutenant S. T. Trevor.
Deputy Controller of Accounts, Major F. N. Smith.

Executive Engineers.

Captain G. de P. Falconnet, at Thayetmyo.
Captain E. Leeds, Rangoon Cantonment.
Captain J. M. Williams, Rangoon Town.
Mr. P. Magrath, Division of Roads.

SECTION IX.—POST OFFICE.

Lines of post office communication.

114. The post-office communication from Eastern Bengal to Arracan is maintained by land as far as Akyab. From thence the mails are carried by boat to the southern portion of Arracan. From Calcutta mails are conveyed fortnightly by steamer to Akyab, Rangoon, and Moulmein. There is no land mail between Arracan and Pegu; it has been tried, and was abandoned as expensive and slow. From Rangoon mails are conveyed fortnightly up the Irrawaddy by steamers, and to the frontier station of Toungoo by boats on the Sittang River. From Moulmein there is a land mail to Shoay Gyeen on the Sittang River, and the mails there meet those from Rangoon going to Toungoo. The southern stations on the Tenasserim coast receive their mails by steamer from Moulmein monthly.

Post office chiefly used by foreign residents.

115. In British Burmah almost the only persons who use the post office are the foreign residents, that is, Europeans and Indians. The receipts are slowly increasing.

Number of covers received and despatched.

116. The following are the statistics from the chief post offices of Tenasserim and Arracan. No returns have been received for Pegu:—

	Total Covers Received during 1861-62.	Total Covers Despatched during 1861-62.
Moulmein - - - - - - -	97,499	82,280
Akyab - - - - - - -	61,144	84,435
Total - - -	1,58,643	1,66,715

SECTION X.—ELECTRIC TELEGRAPH.

Line connecting British Burmah with Bengal.

117. No addition has been made to the lines since last year. The frequent stoppage of communication by the deep sea cable between Akyab and Kyouk Phyoo shows the necessity of seeking a land route by which to lay the wire to Prome, instead of the present line, which crosses one broad bay and a wide arm of the sea.

Line to connect Rangoon and Moulmein.

118. A line to connect Rangoon with Moulmein has been sanctioned by Government, and will be proceeded with when the season permits. It will be a land line from Shoay Gyeen.

SECTION XI.—MARINE.

Marine of British Burmah.

119. The marine establishments of the province consists of two sea steamers, the "Nemesis," of 110 horse-power, and the "Pluto," of 90; they are attached to the divisions of Tenasserim and Arracan respectively. For the coast service of Arracan also there are two schooners and four row-boats. For the Pegu division there is the Irrawaddy flotilla, which will be more particularly described below.

Port establishments and rules.

120. The port establishments at Moulmein, Rangoon, Bassein and Akyab consist of buoy vessels, several boats, one light-ship at Rangoon, and a light-house at Akyab. These are under the immediate orders of the master attendant or harbour master of each

port. The pilots at the several ports receive licenses, after examination. All vessels entering any of the ports pay dues at the rate of four annas a ton of the ship's burden. At Rangoon, where the outlay to benefit the port is greater than elsewhere, the dues amount to six annas a ton. A tonnage rate of two annas was imposed on vessels entering the port of Amherst, by Act VIII. of 1861.

Irrawaddy flotilla.

121. The strength of the Irrawaddy flotilla during the year consisted of two steamers and two troop-boats kept running, two steamers and a troop boat laid up, and one steamer kept in reserve with a reduced establishment for any such emergency.

Cost of the flotilla and dockyard for the year.

122. In Appendix (K.) will be found the total expense of the flotilla and dockyard at Rangoon for the year ending the 30th April 1862. The cost of each was—

	Rs.
Flotilla - - - - - - - -	1,44,373
Dockyard - - - - - - - -	55,199
Total - - - Rs.	1,99,572

The expenditure thus shown includes everything incurred on account of pay of all ranks, for stores and repairs of the vessels of the flotilla, together with the cost of establishment for the dockyard, and for office contingencies.

Disbursements not belonging to the marine of British Burmah.

123. The following sums are not included in Statement (K.) as having been incurred on account of British Burmah, because they pertain to other Governments, or only indirectly to British Burmah, and the proportion to be debited against that province cannot yet be fairly ascertained. These sums are 10,544 rupees on account of the Alguada Reef light-house, 9,655 rupees for Bengal, Bombay, and other vessels, and 58,000 rupees for coal and pilotage to ships of the Indian navy and of the Bengal marine. A considerable portion of this expenditure is undoubtedly on account of the military charges of British Burmah, not for marine requirements.

Receipts, actual and *pro formâ*.

124. Taking the above sum of 1,99,572 rupees as the actual expenditure on account of the Irrawaddy flotilla and dockyard as far as relates to British Burmah, the following are the offsets for the year:—

	Rs.
(I.)—Cash earnings of the flotilla for freight, passage and towage - - - - - - - - - -	55,048
(II.)—Fines and refunds - - - - - - - - -	513
(III.)—*Pro formâ* credits on account of transport of troops, commissariat and ordnance stores - - - - -	1,02,055
(IV.)—Cash collections for work done in the yard for private persons, hire of dock, &c., and actually collected during 1861-62 - - - - - - - - -	55,538
(V.)—*Pro formâ* credits for wages of artificers employed on repairs of vessels belonging to the Indian navy, the Bengal Presidency, &c. - - - - - - - -	16,393
Total - - - Rs.	2,29,547

This shows then, on the whole, a small profit of 29,975 rupees on the transactions of the flotilla and dockyard, not including wear and tear, and cost of buildings.

Receipts and disbursements on account of ports in Pegu.

125. As regards the ports of Pegu, the receipts and disbursements have been as follows:—

PORTS.	Receipts.	Disbursements.
	Rs.	Rs.
Rangoon* - - - - - - -	60,072	44,940
Bassein - - - - - - -	7,393	12,555
Total - - - Rs.	67,465	57,495

showing an increase in the receipts of nearly 100 per cent. over the previous year. The increase is owing to the greater number of vessels which arrived during 1860-61. The port dues claimable on Government vessels in the ports of Pegu, and not collected, amounted to 4,488 rupees.

126. The

* Including wharfage.

126. The following Table exhibits the numbers and tonnage of vessels which arrived and departed during the year:—

Vessels arrived and cleared out at ports in Pegu.

PORTS.	DESCRIPTION.	ARRIVALS.		DEPARTURES.	
		Number of Vessels.	Tonnage.	Number of Vessels.	Tonnage.
Rangoon	Private vessels	438	187,472	429	137,787
	Government vessels	19	16,252	19	16,052
Bassein	Private vessels	83	29,606	83	29,571
	Government vessels	—	—	—	—
	Total	540	203,330	531	183,410

During the year the sum of 5,174 rupees was received on account of wharfage, for vessels unloading at the main wharf at Rangoon.

Tenasserim steamer "Nemesis."

127. In Statement (K.) will be found the cost of the marine department in Tenasserim. The steamer "Nemesis" is employed to communicate with the stations on the southern coast, and also with Port Blair. The cost of her establishment, stores, and expenses, is estimated as amounting to 50,000 rupees during the past year.

Moulmein Port Fund—receipts and disbursements.

128. The receipts and disbursements of the Moulmein Port Fund were as follows:—

	Rs.
Receipts	36,541
Disbursements	19,052

There has been a considerable increase in the receipts during the past year, and the balance against the fund is now trifling; when the new light-house on Double Island is completed, the cost of that building and the establishment will have to be debited against this fund.

Steamer "Pluto" on Arracan coast.

129. The cost of the steamer "Pluto," including establishment and fuel, during the year, amounted to 44,694 rupees; the amount for stores is not given separately. The several boats of the flotilla cost, including everything, for the year 25,275 rupees. To balance these charges, the cash receipts on account of private freight and passengers by the steamer amounted to 26,890 rupees, and the *pro formâ* credit for conveyance of Government freight and passage by steamer amounted to 8,505 rupees. The steamer, therefore, paid her expenses within 10,000 rupees.

Port funds.

130. The receipts and disbursements in the fund were as follows:—

	Rs.
Receipts	25,155
Disbursements	11,436

The vessels which arrived and departed during the year were—

PORTS.	DESCRIPTION.	ARRIVALS.		DEPARTURES.	
		Number of Vessels.	Tonnage.	Number of Vessels.	Tonnage.
Akyab	Private vessels	239	117,177	234	114,458
	Government vessels	2	638	1	238
Kyouk Phyoo	Private vessels	11	665	13	1,044
	Government vessels	2	530	2	530
	TOTAL	254	119,010	250	116,270

SECTION XII.—FINANCIAL.

Amount demand on account of the year.

131. A reference to Statement (J.) of the Appendix will show that the total amount of demand for imperial revenue in the province of British Burmah, on account of 1861-62, amounted in round numbers to 96¼ lakhs of rupees, or 962,700 *l.*

Expenditure for civil administration and all other departments.

132. By reference to Statement (K.) of the Appendix it will be seen that the expenditure on account of the civil administration during the same period was in round numbers 40 lakhs. The whole of the expenditure on account of the military establishments during the

the year has not yet been ascertained, but the following is believed to be a close approximation to the actual amounts:—

	Rs.
Artillery.	
One horse battery complete	1,95,000
Two reserve companies	1,40,000
Mountain train howitzers, ponies	5,000
Total	Rs. 3,40,000
Infantry.	
Two European regiments	14,00,000
Three native infantry regiments	9,30,000
One local corps	2,00,000
Total	Rs. 25,30,000
Staff	2,00,000
Ordnance, commissariat and medical departments	1,30,000
Cattle	1,93,000
Total	Rs. 5,23,000

or, in round numbers, 34 lakhs of rupees. The only remaining item of expenditure is the Public Works Department, which in 1861-62 expended in Pegu and Tenasserim 15,26,000 rupees. To this sum has to be added about one lakh for Arracan; and the whole expenditure of British Burmah is shown to be in round numbers as follows:—

	Rs.
Civil administration	40 lakhs.
Military „	34 „
Public works „	15¼ „
Ditto for Arracan	1 „
Total	Rs. 90¼ lakhs.

Miscellaneous expenditure.

This leaves about six and a quarter lakhs of rupees for the expenditure in the electric telegraph, the Post Office, the geological survey, the mail steamers, and the steamers employed in the relief of troops; the disbursements on those accounts cannot be estimated here.

Financial condition satisfactory.

133. The financial condition of British Burmah, however, may be considered as satisfactory.

SECTION XIII.—POLITICAL.

Burmah.

134. No event of importance has occurred in the intercourse with the Government of Burmah.

Karenee.

135. The Karenee States have had the usual petty disturbances among themselves.

Siam.

136. The Commissioner of Tenasserim reports that the Shan States, tributary to Siam, continue to show a friendly desire to suppress robbery and cattle-stealing on the border.

Yunan.

137. No certain information has been received relative to the state of affairs in Yunan. But the absence of caravans of traders shows that the country is still disturbed.

SECTION XIV.—MILITARY.

Great reduction in the strength of the troops composing the Pegu Division.

138. In the Report for last year on Pegu it was stated that considerable reduction had been made in the native infantry force, and in the artillery of the Pegu division. The whole of the proposed reductions have now been carried out. The strength of the regular troops, European and native, now in British Burmah, amounts to 2,232 of the former, and 3,305 of the latter, or a total of 5,537, not including officers. The force is larger than it will be eventually; as the death vacancies in the Pegu sapper battalion will not be filled up, and the battalion will be replaced by a regiment of native infantry one-third less in number.

The

The strength of the regular troops in the Pegu division at the close of the year 1860 was 2,373 Europeans and 9,405 natives, or a total of 11,778, not including officers.

Pegu Light Infantry and Arracan battalion.

139. The Pegu Light Infantry has been finally broken up, and the Arracan battalion is now in course of being disbanded.

Meeaday abandoned.

140. Consequent on these reductions the Fort of Meeaday, on the left bank of the Irrawaddy, and six miles from the frontier, has been abandoned, and the defences have been dismantled. The troops on that part of the frontier are concentrated at Thayetmyo, on the right bank of the Irrawaddy, three miles below Meeaday.

Arracan battalion disbanded.

141. The final disbandment of the Arracan battalion may be noticed here, though the measure was not completed until after the close of the year. This was a light infantry corps, raised during the first Burmese war in 1824. It was composed of Arracanese, and latterly with a portion of Munipoorees and men of adjoining hill tribes. The battalion has done good service in the hill warfare of Arracan, a country where regular troops have great difficulty in moving. On the occupation of Pegu the corps was brought round to be employed in subduing those portions of the country where partisan chiefs carried on a desultory but harassing war. In such jungle skirmishes the commanding officer, Captain H. Barry, was killed, but the battalion did its duty well and quieted the country; some of the men have been drafted into the constabulary, and the native officers and non-commissioned officers have received pensions or gratuities.

SECTION XV.—POPULATION.

The rural population numbered yearly.

142. Throughout British Burmah a census of the whole population is taken yearly at the time that the rolls for the capitation tax are made out. This census does not extend to those towns where a house-tax is levied in lieu of the poll-tax; but the population of the towns is numbered at intervals, and the total number of people, as shown in the annual statements, is believed to be substantially accurate.

Population of each division.

143. Of the three divisions of British Burmah Pegu is by far the most populous, and has made the most rapid progress within the last three years. This is shown by the following figures:

DIVISION.	Total Number of Souls in		
	1859.	1860.	1861.
Pegu	948,371	1,041,340	1,150,189
Tenasserim	- -	332,542	371,402
Arracan	- -	- -	376,306
TOTAL	948,371	1,373,882	1,897,897

In Pegu the large increase is to be attributed to the immigration which set in steadily from the Burmese territory four years ago, and which still continues.

Various races in British Burmah.

144. The various races in the country are as follows:—

RACES.	Divisions of			TOTAL.
	Pegu.	Tenasserim.	Arracan.	
1. European and their descendants	1,252	1,146	164	2,562
2. Burmese, including Arracanese and Talaings.	886,264	211,594	301,329	1,399,187
3. Karens	184,006	100,358	62	284,426
4. Shans and Tounghoos	24,892	18,144	3,892	46,928
5. Chinese	2,001	8,118	135	10,254
6. Khyengs	16,647	- -	20,183	36,830
7. Indians	17,907	28,731	26,841	73,479
8. Mahomedans of Burmah	- -	- -	19,343	19,343
9. All races not included in the above	17,220	3,311	4,357	24,888
TOTAL	1,150,189	371,402	376,306	1,897,897

In addition to the Karens herein entered, there are mountaineers of that race in the district of Toungoo numbering 62,326 souls.

 145. The

Numbers of both sexes.

145. The numbers of both sexes were as follows:—

Men	574,178
Women	552,666
Boys	404,733
Girls	366,320
TOTAL	1,897,897

These returns do not include the population within the military cantonments.

SECTION XVI.—AGRICULTURE.

Experimental cotton cultivation.

146. The experimental cultivation of cotton has been continued by Dr. Brandis. The seed used was of two kinds, New Orleans and Sea Island, both raised in Pegu. The first yielded 120 lbs. of cleaned cotton per acre; the second, being longer in arriving at maturity, was withered by the heat of the early summer sun, and produced very little. The New Orleans variety appears well suited to the climate, but to induce Burmese peasants to cultivate it is an object rather to be hoped for than expected.

Variety of tobacco from Bengal.

147. The Rungpore variety of tobacco has been successfully introduced into Pegu.

Tea plantation.

148. A tea plantation has been commenced in the district of Akyab by Mr. A. L. M'Millan. The quantity of land under cultivation is not stated.

SECTION XVII.—FORESTS.

Teak forests formed in three divisions.

149. The forest regions of British Burmah brought under regular administration lie in the divisions of Pegu and Tenasserim; for teak timber, though known in Arracan, is not in sufficient quantity to be worth preserving. The teak forests of Pegu and Tenasserim are arranged in three grand divisions, marked out by the courses of the main rivers and their tributaries. Each grand division is placed under the control of a deputy superintendent, and is subdivided into sections, which form convenient groups for working and watching the tracts where the trees grow.

Forests worked by private enterprise.

150. During the year 1861-62 the principal feature of administration has been the further development of the plan of working the forests by means of private enterprise, instead of by direct Government agency. But the results of that plan are not yet apparent.

Salween Division.

151. In the Salween or Tenasserim division the plan does not appear to have been so successful as was hoped, from the results of the system in the previous year. In 1860, not less than 11,714 logs were brought down by the permit holders, but in the past year only 2,105. It is considered this resulted from the discontent of the Karen inhabitants of the Shoay Gyeen forests, who had been superseded as permit holders, and would give no assistance to those who succeeded them. It is understood, however, that they have since worked willingly.

Sittang Division.

152. Permits were issued in the Sittang division last year, and the plan has worked well in 1861-62. The holders brought down 6,748 logs.

Irrawaddy Division.

153. In the Irrawaddy division the timber brought down by the permit holders was not much, but arrangements for future years were made, as follows:—All forests, except those of the Tharawaddy section, and a portion of the southern section, which were reserved to be worked by Government, were made over to permit holders. The terms for the southern forests were competition by tender for the amount to be paid on account of permit fee, and a payment of 10 rupees for each log of full size brought out; a proportional payment being made for undersized logs. The permit holder only to fell trees killed and marked by the Forest Department, and the permit to hold good for three years. The Eastern Prome forests were disposed of in like manner, but for a term of six years. The forests west of the Irrawaddy were dealt with on a different principle. They are poor, and would not bear the expense necessary to preserve them; they were, therefore, offered on a lease for 12 years; the lessee to girdle for himself, and to pay, on the timber he brought out, the amount he had tendered to give for his annual lease. The price to be paid for each full-sized log was seven rupees, and three and a half for each under-sized. Tenders were not made for all groups of the western section, but such as were made were accepted, and the remaining groups have been allotted for shorter terms.

Amount received during the year for permits.

154. The amount derived by permit fees during the year has been—

	Rs.
Salween Division	22,835
Sittang Division	14,030
Irrawaddy Division	24,600
TOTAL	*Rs.* 61,465

155. Considerable

Works for improving communication with the forests.

155. Considerable progress has been made during the year in opening out streams by blasting rocks which obstructed the channels. In the upper part of the Pegu River a succession of rocks, extending for 10 miles, was thus removed. This work has been carried on not only at spots near to each other, but at places hundreds of miles apart,—a circumstance to be remembered when estimating the difficulties to be overcome, and the value of the work accomplished. Numerous streams have also been cleared of jungle and drift timber which obstructed them. Similar work has been carried on by one of the permit-holders, Mr. W. Wallace. Thus some hundreds of square miles of forest, hitherto sealed up by nature, have been opened to the axe of the forester.

Various operations in the Forest Department.

156. The young trees in the forest have been preserved and protected as far as possible. The teak plantation at Prome is reported to have progressed favourably. The number of trees girdled during the year in the three divisions has been 24,201. Useful timber of other kinds than teak, to the amount of 658 tons, has been brought down. A collection of such timber has been made and catalogued, and experiments to test their strength have been commenced.

Number of logs yielded.

157. The total yield of teak timber by the forests during the year has been as follows:—

	Number of Logs.
By Contractors and the Forest Department - - - -	20,436
By Permit-holders - - - - - - - - -	9,236
Total - - -	29,672

The whole of the above-mentioned logs have been delivered at the timber depôts.

Number of logs brought from beyond the British frontier.

158. Not less than 96,366 logs of teak were brought from foreign states down the Salween River. Down the Irrawaddy and Sittang Rivers 9,879 logs were brought.

Financial result.

159. The last point to be noticed is the financial result of the year; the expenditure has been—

	Rs.
Works - - - - - - - - - - -	1,86,614
Maintenance - - - - - - - - - -	52,778
Establishment - - - - - - - - - -	82,942
Total - - -	*Rs.* 3,22,334

This sum is the *bonâ fide* forest expenditure. In the Timber Revenue Department at Moulmein 13,000 rupees were expended in establishments, which, added to the above sum, = 3,35,334 rupees, as shown in Statement (K). The amount actually realised during the year by sale of timber-permit fees, and various items, was 3,96,885 rupees, thus showing a profit of 74,000 rupees. But a good deal of this expense has been incurred on account of timber not yet brought into account, and the department has now on hand 54 elephants, of which 12 were purchased during the year. To the above sum, realised on account of the forests, has been added the sum of 2,87,412 rupees, collected on account of timber revenue at Moulmein, and the total will be 6,84,297 rupees, as shown in Statement (J).

The total quantity of timber sold by the department during the year amounted to 14,912 logs; the prices realised were on the average about one-third less than for similar timber in the previous year. Thus, from the state of the timber market, no adequate increase has accrued to the income of the department, though the quantity of timber sold has been augmented 80 per cent.

The superintendent, Dr. Brandis.

160. The energy, skill, and excellent administration of the Superintendent, Dr. Brandis, have been conspicuous during the year. He reports favourably of the management of his deputies, Mr. H. Leeds and Lieutenant W. J. Seaton, and also of Mr. W. C. Graham, in charge of a section of the Prome forests.

SECTION XVIII.—TOPOGRAPHICAL SURVEY.

PEGU.

General sketch of work done during the year.

161. The operations of the year commenced with mapping out the results of past surveys, and, as this progressed, surveyors were despatched to make good gaps and deficiencies that appeared in the process of plotting. Later in the season the superintendent was engaged in surveying a portion of the Yoma or central range of hills for about 50 miles to the north of Rangoon, and afterwards in surveying the lower portion of the chain of the Arracan hills, forming part of the Bassein district, and lying between the 16 and 17½ degrees of north latitude.

Field work.

162. The field work done during the year comprised 87 miles of traverse, 37 of river triangulation, 185 of river survey, 407 of detached linear survey, and an area of about 4,000 square miles.

Mapping.

163. The two maps compiled in the previous year formed two sheets of a series of six into which it was proposed to divide the province; but these sheets were found to require re-construction. In re-casting them they have been re-projected as two sheets of a series of four into which it is now proposed to divide the province. Of these one sheet is intended to be published in July; and the second will, it is hoped, be published in December next.

Establishment and cost.

164. The establishment during the year consisted, besides the superintendent, of 10 native surveyors, one artificer and one writer. The cost was 17,726 rupees during the year, exclusive of the military pay of the superintendent, giving for the year an average of *Rs.* 4. 6. per square mile.

Completion.

165. It is stated by the superintendent that he anticipates being able to complete the survey by the 1st May 1864.

TENASSERIM.

Survey operations in the Tenasserim Division.

166. In the Tenasserim Division the only survey in progress has been a partial one in the Amherst District; it is carried on by townships; it has been more or less in progress since 1857, and about 1,000 square miles have been surveyed. The establishment has also been employed on a variety of miscellaneous work, such as surveying forest grants, &c. The monthly cost is only 650 rupees at a maximum, and 508 rupees monthly during the recess.

ARRACAN.

No survey during the year in Arracan.

167. In the Arracan Division no survey operations have been carried on during the past year, the establishment having been withdrawn to the Chittagong District. In Arracan the district of Akyab has had its survey completed, and those of Ramree and Sandoway remain to be surveyed.

SECTION XIX.—VACCINATION.

More extensively practised than heretofore.

168. Dr. Graham, the deputy inspector general of hospitals, reports that during the past year vaccination has been more extensively practised and with greater success in Pegu than heretofore. The following is the Table of the results:

STATIONS.	Europeans, including East Indians.	Natives of India.	Natives of Burmah.	Successfully.	Unsuccessfully.	Unknown—failed to attend again.	Gross Total Vaccinated.
Moulmein	57	165	94	271	45	- -	316
Shoay Gyeen	13	52	31	96	- -	- -	96
Toungoo	44	26	1,226	1,027	5	264	1,296
Thayetmyo	30	7	125	154	8	- -	162
Rangoon	70	7	23	82	2	16	100
Total	214	257	1,499	1,630	60	280	1,970

No cases at Henzadah or Prome were successful. It is noticed by nearly every medical officer that the Burmese do not place much reliance on vaccination as a protection against small-pox. Inoculation is extensively practised by Burmese medicine men.

SECTION XX.—HOSPITALS AND DISPENSARIES.

Pegu—Rangoon Dispensary.

169. In Pegu two dispensaries are maintained partly by public subscriptions and partly by Government; one of them is at Rangoon, and one at Thayetmyo. The former institution was not in a satisfactory state last year; it has, however, considerably improved in 1861-62. The number of patients has very much increased, and the expenses, which were far too high, have been much reduced; 1,118 out-patients, and 230 in-door, were treated during the year. The institution is now in a satisfactory state.

Thayetmyo.

170. At the Thayetmyo Dispensary 690 out-door, and 70 in-door patients were treated. The funds of this institution are small, but they are turned to the best account.

171. The

171. The Moulmein General Hospital is an institution well maintained and well administered; it is chiefly useful as a hospital for the treatment of European seamen, but it also receives natives, and large numbers of out-door patients are relieved. The funds are derived partly from Government, and partly from the paying patients, and partly from public donations, but the last-mentioned are not extensive. Tenasserim—Moulmein General Dispensary.

172. During the past year 382 Europeans and 766 Asiatics were admitted into and treated in the hospital; at the same time not less than 5,944 out-door patients were treated. The Commissioner observes in his report, "This very useful institution has fully sustained its character during the past year under the very able and zealous management of the civil surgeon Dr. Marr. He reports most favourably of the assistant apothecary Mr. d'Roza." Number of patients.

173. The hospitals and dispensaries maintained in Arracan are a general and seamen's hospital at Akyab, and charitable dispensaries in connexion with the usual civil hospitals. The Seamen's Hospital at Akyab is supported by a monthly donation from Government of 327 rupees, and an allowance from the port fund of 120 rupees; the patients also pay. The hospital does not appear to be of that degree of use to seamen resorting to Akyab, which the amount of expenditure would lead us to expect. During the past year only 37 patients were admitted. Arracan—Akyab.

174. At the dispensary of Akyab 276 in-door patients were treated, and 1,980 out-door. At Kyouk Phyoo 239 in-door and 299 out-door. There is nominally a dispensary at Sandoway; but being within the gaol inclosure, few patients resort thereto. Dispensaries.

SECTION XXI.—MISCELLANEOUS.

175. The geological survey proceeded during 1861-62 under the direction of Mr. W. F. Blanford. The portion of country examined was that portion of the district of Bassein which lies between the Bassein river and the mountains of Arracan. The rocks are described as "beds of sandstone, shale, and occasionally of limestone belonging to the nummulitic series." Limestone was found at several localities; the most important lie to the south of the town of Bassein, and of these, the richest are near the village of Thamandewa. The rock is described as "inexhaustible, the quality good, and access thereto easy." No traces of petroleum were met with. Strings of lignite of small thickness and trifling extent occasionally occur. "The coal supposed by some to exist in the neighbourhood of Dalhousie is only an instance of these deposits." Geological survey.

176. The cantonment garden at Rangoon continues under the direction of the Assistant Commissary General, Major Harris, to fulfil the objects for which it was established by the Most Noble the Marquis of Dalhousie, and to extend its usefulness. Rangoon Cantonment Garden.

177. During the past year 150 soldiers of the 68th Light Infantry worked at plots within the portion of the ground allotted to a kitchen garden. They raised during the season—very short in the latitude of Rangoon—not less than 41,000 lbs. of vegetables. These are partly purchased by the commissariat and partly sold by the men themselves. The commanding officer reserves permission to work in the garden as a reward to the best behaved men. Work done therein.

178. A bed of aluminiferous shale has been discovered by Dr. Brandis in the Zoonzaleng district of the district of Martaban. It is doubtful, however, whether this will be of practical value. Aluminiferous shale.

179. A deposit of Galena ore has been discovered in the Tavoy District on a small stream running into the Tenasserim river. The spot is difficult of access, and the Deputy Commissioner, Major Stevenson, was unable to reach it during the present year on account of the lateness of the season, so that particulars regarding the position of the ore are still wanting. Galena ore.

180. The local administration has been deprived during the year by death of the services of Mr. C. M. Crisp, a gentleman for several years resident at Rangoon, and who rendered essential service to General Godwin during the operations which terminated in the capture of the stockaded portion of the Burmese force round the great pagoda at Rangoon. Since the close of the year also, the Chief Commissioner has heard with regret of the murder of Lieutenant C. M. Halhed, while on duty on the Toungoo frontier, by a band of robbers from the Burmese territory. Death of Mr. C. M. Crisp, and murder of Lieutenant Halhed.

181. British Burmah was visited during 1861 by the Inspector General of Hospitals, Madras Presidency. His report will, no doubt, contain his observations on British Burmah generally; but the Chief Commissioner cannot allow this opportunity to pass without recording his grateful thanks for the many useful suggestions received from Dr. D. M'Pherson on sanitary subjects as regards the gaols, the hospitals, the towns, and the general welfare of the inhabitants. Visit of the Inspector General of Hospitals.

SECTION XXII.—CONCLUSION.

Officers of the local administration.

182. The Chief Commissioner desires to return his best thanks to the officers of the local administration of British Burmah for their services during the past year. To the Chief Engineer, Captain C. D. Newmarch, Secretary in the Public Works Department, the Chief Commissioner is much indebted for the efficient state of that department in every respect. To Captain H. Nelson Davies, his secretary, the Chief Commissioner conveys his best thanks.

The following officers also the Chief Commissioner desires to bring to notice for the efficient manner in which each has done his duty:—

Commissioners.

Lieutenant Colonel A. Fytche.
Major T. P. Sparks.
Major G. Verner.

Inspector General of Police.

Captain H. T. Duncan.

Superintendent of Forests.

Dr. D. Brandis.

Deputy Commissioners.

Major S. R. Tickell.
Major R. D. Ardagh.
Major J. P. Briggs.
Lieutenant Colonel D. Brown.
Major F. W. Ripley.
Captain E. J. Spilsbury.
Captain M. N. S. Lloyd.
E. O'Riley, Esq.
Major J. J. F. Stevenson.
Captain H. A. Browne.
F. Shepperd, Esq.
Lieutenant W. P. Harrison.
H. W. Beddy, Esq.
Major E. M. Ryan.

Assistant Commissioners.

Captain C. P. Hildebrand.
Lieutenant A. G. Duff.
F. J. Fallon, Esq.
Captain R. C. Breda.
Major R. F. Leigh.
G. Hough, Esq.
Lieutenant C. W. Street.
Captain E. B. Sladen.
J. Macrae, Esq.
Lieutenant W. W. Pemberton.
Lieutenant C. E. Watson.
Lieutenant W. C. Plant.

Extra Assistant Commissioners.

G. E. Barr, Esq.
C. Phillips, Esq.
J. Hind, Esq.
De Courcy Ireland, Esq.
Moung Khaing.
Moung Sheve Hlan.

Settlement Officers.

Captain A. R. M'Mahon.
J. Treacy, Esq.
Lieutenant W. Munro.

Superintendent, Irrawaddy Flotilla.

Captain A. Brooking.

Collectors of Customs.

R. S. Edwards, Esq.
W. Twemlow, Esq.
C. P. Brown, Esq.
D. F. Lonsdale, Esq.

Master Attendants.

Lieutenant F. W. Aylesbury, I. N.
Captain J. C. Harton.
Captain W. Porter.

Medical Officers.

Dr. G. Marr.
Dr. J. E. Dickinson.
Dr. J. Cowie.
Dr. J. Davis.
Dr. J. Heffernan.
Dr. J. Hook.
Dr. J. M. Donally.
Dr. H. G. Gordon.

The officers of the police force who deserve special notice are—

Captain J. Duval.
Major B. Ford.
J. B. Doyle, Esq.
Lieutenant C. T. Hill.
Lieutenant J. Lowndes.
Lieutenant J. C. Middleton.
Lieutenant W. G. Grove.
Captain C. Coote.
Captain S. C. Montgomery.
Lieutenant W. G. Hughes.
Lieutenant C. A. Mackenzie.
Lieutenant F. S. FitzPatrick.

Rangoon, 14 July 1862.

APPENDICES to the REPORT on the Administration of Province of BRITISH BURMAH, for the Year 1861-62,

APPENDIX (A.)

STATEMENT of the AREA, POPULATION, CULTIVATION, and REVENUE of BRITISH BURMAH, for 1861-62.

1. DIVISION.	2. Area in Square Miles.	3. Population, Number of Souls.	4. Number of Townships.	5. Area of Cultivation.	6. Land Revenue.	7. Capitation Tax.	8. Customs, including Fines, Confiscations, &c.	9. Fisheries.	10. Abkaree, including Opium.	11. Miscellaneous Taxes and Receipts.	12. Grand Total of Revenue.	13. REMARKS.
				Acres.	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	*Rs.*	
Pegu - - - -	34,290	1,150,189	66	907,561	13,98,353	11,92,044	15,68,750	4,19,993	3,13,663	9,77,425	58,70,228	The area of cultivation refers to that for 1860-61, as that for 1861-62 had not been fully ascertained when this Statement was made out.
